Chairman's statement

On 19 April 2011 it was announced that a substantial part of the business activities of RBS N.V. would transfer to RBS plc. The majority of the transfers were concluded in 2011 and 2012. A few businesses remain, including India, Indonesia and China, and their future is being considered in light of the recently announced changes to our wholesale banking proposition. As confirmed on 19 April 2011, the RBS Group is committed to provide the necessary support to ensure that RBS N.V. continues to meet its commitments during and after the transfer of businesses to RBS plc. During 2014, the activities of RBS N.V. in Thailand transferred to RBS plc in addition to other separate assets and liabilities.

A major milestone we reached last year was the completion of the Asset Quality Review as mandated by the European Central Bank (ECB). As the RBS Holdings (RBSH) Group was designated as a significant institution, a detailed review of the RBSH Group's balance sheet took place. We were pleased with the outcome as no major items were raised. Subsequently, on 4 November the ECB formally took over the role of lead supervisor of the RBSH Group from the Dutch Central Bank (DNB). The DNB continues to be part of the Joint Supervisory Team headed by the ECB.

In February 2015, RBS Group announced changes to its Corporate & Institutional Banking (CIB) business to build a stronger, safer and more sustainable business, focused mainly on UK and Western European customers, both corporates and financial institutions, supported by trading and distribution platforms in the UK, US and Singapore. As a consequence, RBS Group will reduce its geographical footprint to approximately 13 countries, compared with 38 at the end of 2014.

As announced, we are exploring the option of a sale for the countries that are to be exited. If this is not feasible, it is expected that the countries will be wound down. The full impact of the announced changes on RBS N.V. is currently being reviewed.

Under the new structure, RBS N.V. and its businesses moved to the new Capital Resolution organisation. For 2015, the focus will remain on the further de-risking of our balance sheet.

Results of operations in 2014

Operating loss before tax was €57 million compared with a loss of €142 million in 2013. This was largely due to lower expenses as a result of lower staff and non-staff costs, due to business transfers to RBS plc, partly offset by lower income due to the transfers of business and the loss on sale of the majority of the liquidity portfolio.

Net interest income decreased due to transfers to RBS plc and the continued low interest rate environment, while non-interest income decreased mainly due to higher losses on the sale of available-for-sale securities.

Total equity as at 31 December 2014, was €3.5 billion, an increase of €0.6 billion compared to 31 December 2013, mainly due to unrealised gains and realised losses on available-for-sale assets.

Capital

RBS N.V. continues to be well capitalised. On 31 December 2014, RBS N.V.'s Total capital ratio was 33.9%, the Tier 1 capital ratio was 24.5% and the Core Tier 1 capital ratio was 16.2%.

Outlook

The outlook for the global economy over the near to medium-term is for modest growth. Risks to growth and stability stem mainly from continued imbalances - among and within countries - and from uncertainty about how economies will respond as the extraordinary monetary policy measures implemented during the crisis are unwound and to other measures that have just been instigated.

Against this background, commercial performance is expected to remain broadly flat.

I would like to conclude by referring to a statement recently made by RBS Group Chief Executive, Ross McEwan:

"Last year we identified the areas we needed to improve in order to deliver our strategy - cost, complexity, capital and trust from our customers. The energy and resolve of our people have resulted in significant progress on each, and we have delivered on the goals we set for 2014."

On behalf of the RBS N.V. Managing Board, I would like to thank all our employees and clients for their continued commitment during 2014.

Jan de Ruiter
Chairman of the Managing Board RBS N.V.

Amsterdam, 30 April 2015

Presentation of information

In the Report and Accounts and unless specified otherwise, the term 'Bank' means The Royal Bank of Scotland N.V., the 'Group' or 'RBS N.V.' means the bank and its subsidiaries. 'RBS Holdings' means RBS Holdings N.V.. RBS Holdings N.V. is the parent company of the bank, 'RBSH Group' is the holding company and its consolidated subsidiaries and associated companies. The Royal Bank of Scotland Group plc (RBSG) is the ultimate holding company of RBSH Group. RBS Group refers to RBSG and its consolidated subsidiaries and associated companies. RBS plc refers to The Royal Bank of Scotland plc. The terms 'Consortium' and 'Consortium Members' refer to RBSG, Stichting Administratiekantoor Beheer Financiële Instellingen (the Dutch State, successor to Fortis) and Banco Santander S.A. (Santander) who jointly acquired RBS Holdings on 17 October 2007 through RFS Holdings B.V. (RFS Holdings).

The company publishes its financial statements in 'euro', the European single currency. The abbreviations '€m' and '€bn' represent millions and thousands of millions of euros, respectively. Reference to '\$' is to United States of America (US) dollars. The abbreviations '\$m' and '\$bn' represent millions and thousands of millions of dollars, respectively.

Certain information in this report is presented separately for domestic and foreign activities. Domestic activities consist of transactions within the Netherlands. Geographic analysis has been compiled on the basis of location of office.

The results, assets and liabilities of individual business units are classified as trading or non-trading based on their predominant activity. Although this method may result in some non-trading activity being classified as trading, and vice versa, any resulting misclassification is not material.

All annual averages in this report are based on month-end figures. Management does not believe that these month-end averages present trends materially different from those that would be presented by daily averages.

Governance and management are conducted on an overall basis within RBSH Group. Therefore the discussions in this document that refer RBSH Group also apply to RBS N.V.

International Financial Reporting Standards

Unless otherwise indicated, the financial information contained in this Annual Report has been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union (EU) and IFRS as issued by the International Accounting Standard Board (IASB).

Revised organisational structure

During 2014, the RBS Group introduced a new organisational structure - see page 16 for details. Segmental data for RBS N.V. for prior years have been restated accordingly.

Glossary

A glossary of terms is included on pages 194 to 191.

Forward-looking statements

Certain sections in this document contain 'forward-looking statements' as that term is defined in the United States Private Securities Litigation Reform Act of 1995, such as statements that include the words 'expect', 'estimate', 'project', 'anticipate', 'believe', 'should', 'intend', 'plan', 'could', 'probability', 'risk', 'Value-at-Risk (VaR)', 'target', 'goal', 'objective', 'will', 'endeavour', 'outlook', 'optimistic', 'prospects' and similar expressions or variations on such expressions.

In particular, this document includes forward-looking statements relating, but not limited to: the impact of certain aspects of the transformation plan announced by the RBS Group on RBS N.V., the impact of the restructuring of the RBS Group's CIB business on the remaining transfers of certain of the businesses of RBS N.V. to RBS plc (the "Transfers"), the impact on RBS N.V. of the implementation of the ring-fence of the retail banking operations of RBS Group, divestments, capitalisation, portfolios, net interest margin, capital and leverage ratios, liquidity, risk-weighted assets (RWAs), RWA equivalents (RWAE), Maximum Distributable Amounts (MDA), minimum requirements for eligible liabilities (MREL), return on equity (ROE), profitability, cost:income ratios, loan:deposit ratios, funding and risk profile; discretionary coupon and dividend payments; litigation, regulatory and governmental investigations; RBS N.V.'s future financial performance; the level and extent of future impairments and write-downs; and RBS N.V.'s exposure to credit rating risk and to various types of market risks, such as interest rate risk, foreign exchange rate risk and commodity and equity price risk. These statements are based on current plans, estimates and projections, and are subject to inherent risks, uncertainties and other factors which could cause actual results to differ materially from the future results expressed or implied by such forward-looking statements. For example, certain market risk disclosures are dependent on choices about key model characteristics and assumptions and are subject to various limitations. By their nature, certain of the market risk disclosures are only estimates and, as a result, actual future gains and losses could differ materially from those that have been estimated.

Other factors that could adversely affect RBS N.V.'s results and the accuracy of forward-looking statements in this document include the risk factors and other uncertainties discussed on pages 172 to 183. These include: RBS N.V.'s reliance on the RBS Group, RBS N.V.'s ability to achieve its capital targets, RBS N.V.'s ability to attract and retain qualified personnel; uncertainties regarding the outcomes of legal, regulatory and governmental actions and investigations that RBS Group and RBS N.V. are subject to and any resulting material adverse effect on RBS N.V. of unfavourable outcomes; heightened regulatory and governmental scrutiny and the increasingly regulated environment in which RBS N.V. operates; operational risks that are inherent in RBS N.V.'s business; the potential negative impact on RBS N.V.'s business of actual or perceived global economic and financial market conditions and other global risks; uncertainties regarding RBS N.V.'s exposure to any weakening of economies within the EU and renewed threat of default by certain countries in the Eurozone; the achievement of capital and costs reduction targets; ineffective management of capital or changes to regulatory requirements relating to capital adequacy and liquidity; the ability to access sufficient sources of capital, liquidity and funding when required; deteriorations in borrower and counterparty credit quality; the extent of future write-downs and impairment charges caused by depressed asset valuations; the impact of unanticipated turbulence in interest rates, yield curves, foreign currency exchange rates, credit spreads, bond prices, commodity prices, equity prices; basis, volatility and correlation risks; changes in the credit ratings of RBSG, the Bank or other entities of the RBS Group; changes to the valuation of financial instruments recorded at fair value; competition and consolidation in the banking sector; regulatory or legal changes; changes to the monetary and interest rate policies of central banks and other governmental and regulatory bodies; changes in laws, regulations, accounting standards and taxes; the high dependence of RBS N.V.'s operations on its information technology systems and its increasing exposure to cyber security threats; the reputational risks inherent in RBS N.V.'s operations; the risk that RBS N.V. may suffer losses due to employee misconduct; the recoverability of deferred tax assets by RBS N.V.; liabilities resulting from the legal demerger of ABN Amro Bank NV; and the success of RBS N.V. in managing the risks involved in the foregoing.

The forward-looking statements contained in this document speak only as of the date of this announcement, and the RBS N.V. does not undertake to update any forward-looking statement to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

The information, statements and opinions contained in this document do not constitute a public offer under any applicable legislation or an offer to sell or solicitation of any offer to buy any securities or financial instruments or any advice or recommendation with respect to such securities or other financial instruments.

Financial review

Description of business

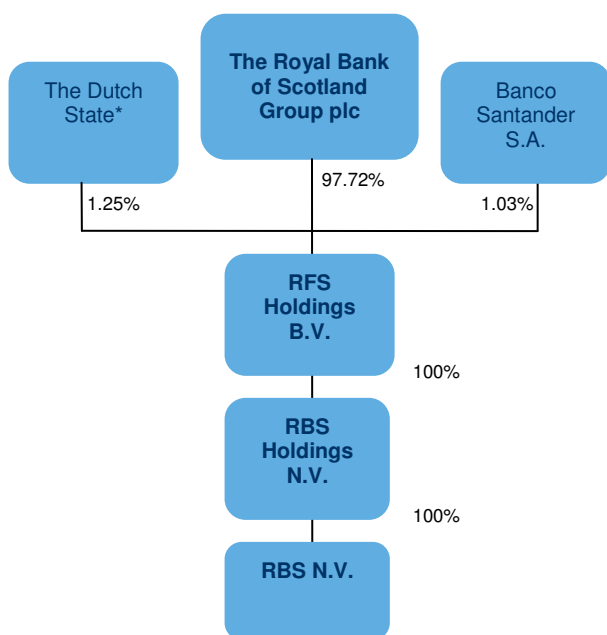

Introduction

RBS N.V. offers a range of banking products and financial services, principally in Europe and Asia.

In 2007, RFS Holdings, which was jointly owned by RBSG, Fortis (succeeded by the Dutch State in 2008) and Santander (together, the 'Consortium Members') completed the acquisition of RBS Holdings.

RBS Holdings has one direct subsidiary, RBS N.V., a fully operational bank within RBSH Group. RBS N.V. is independently rated and regulated, effective from 4 November 2014 the Dutch Central Bank was replaced as the main regulator by the European Central Bank (ECB) in conjunction with the Dutch Central Bank. Certain assets within RBS N.V. continue to be owned by the Dutch State or shared by the Consortium Members.

Since 31 December 2010, RBSG's shareholding in RFS Holdings has been 97.72%. RFS Holdings is controlled by RBSG, which is incorporated in the UK and registered at 36 St Andrew Square, Edinburgh, Scotland. RBSG is the ultimate parent company of RBS N.V.. The consolidated financial statements of RBS N.V. are included in the consolidated financial statements of RBS Group.

*interest is held by Stichting Administratiekantoor Beheer Financiële Instellingen

RBS N.V. had total assets of €23.6 billion and owners' equity of €3.5 billion at 31 December 2014. RBS N.V.'s capital ratios were a Total capital ratio of 33.9%, a Tier 1 capital ratio of 24.5% and a Common Equity Tier 1 capital ratio of 16.2% as at 31 December 2014.

Organisational structure and business review

On 27 February 2014, RBS Group announced the reorganisation of the previously reported operating divisions into three franchises: Personal & Business Banking, Commercial & Private Banking and Corporate & Institutional Banking (CIB). Only CIB, comprising the former Markets and International Banking divisions, is relevant for RBS N.V.. CIB is a single reportable segment.

Corporate & Institutional Banking is the wholesale banking business comprising, Markets and Transaction Services which work closely together to serve customers. The businesses operate internationally providing lending, fixed income, foreign exchange, rates, credit, securitisation and transaction banking services primarily to large UK and international corporates and financial institutions.

Services - supports the customer-facing businesses and provides operational technology, customer support in telephony, account management, lending and money transmission, global purchasing, property and other services. Services drives efficiencies and supports income growth by using a single, scalable platform and common processes wherever possible. It is the centre of excellence for managing large-scale and complex change. Services costs are allocated to the operating segments and is not deemed a reportable segment.

Central Functions comprises corporate functions, such as treasury, finance, risk management, legal, communications and human resources. Central functions manages RBS N.V.'s capital resources and provides services to the operating segments.

RBS Capital Resolution (RCR) became fully operational on 1 January 2014 with pool of c.£29 billion of RBS Group assets (of which approximately £1.5 billion related to RBS N.V.) with particularly high long-term capital intensity, credit risk and/or potentially volatile outcomes in stressed environments. RCR brings assets under common management and increases focus on managing these assets so as to release capital.

Strategic review of CIB

On 26 February 2015, RBS Group announced that it is making further changes to improve its medium-term returns, building a stronger, safer and more sustainable business, focused mainly on UK and Western European customers, both corporates and financial institutions, supported by trading and distribution platforms in the UK, US and Singapore. These changes will create a more focused corporate and institutional bank built on existing product and service strengths. RBS Group will have a strong, client-focused product offering in sterling, US dollar and euro, including:

- Debt financing, with debt capital markets, structured finance and loans.
- Risk management in currency, rates and inflation.
- Transaction services, with UK-focused cash, payments and trade.

CIB will reduce its geographical footprint to approximately 13 countries, compared with 38 at the end of 2014, though RBS Group will also retain its back office operations in Poland and India. In addition to its main distribution and trading hubs in the UK, US and Singapore, RBS Group will remain present in a number of Western European countries with coverage teams. A small sales team will be retained in Japan. US operations will shrink, while retaining the presence required to support the US dollar needs of RBS Group's UK and Western European customers. Priority client sectors will be targeted in infrastructure, transportation, financial institutions, energy and resources.

CIB will continue to reduce its balance sheet and risk profile. RWAs will be reduced by 60% by 2019, with a reduction of more than £25 billion targeted in 2015. Third party assets will be reduced by more than 60% by 2019.

Financial review

Description of business *continued*

This CIB strategy leaves RBS Group well-placed to meet the ring-fencing requirements of the Banking Reform Act 2013. As previously indicated, RBS Group intends to place most banking services inside the ring fence. CIB's remaining "Markets" activities, the operations of RBS International and some corporate banking activity are expected to remain outside the ring-fenced bank in separate legal entities.

Transfers of a substantial part of the business activities of RBS N.V. to RBS plc

Following the announcements in April 2011 by the Boards of RBSG, RBS plc, RBS Holdings and RBS N.V., a substantial part of the business activities of RBS N.V. had been successfully transferred to RBS plc by the end of 2012.

In 2013, assets and liabilities relating to businesses in Russia, Romania, Korea and North America were transferred to RBS plc by a combination of local schemes of arrangement, cross-border merger, novations and subsidiary share sales.

During 2014, the Thailand business was transferred to RBS plc.

RBS N.V. US branches

The RBS N.V. US branches will be closed once the remaining tail assets have been transferred and applicable regulatory approval has been received.

Competition

RBS N.V. faces strong competition in all the markets it serves. Banks' balance sheets have strengthened whilst loan demand has been subdued as corporate investment levels remain low and economic growth is fragile.

Competition for corporate and institutional customers in the Netherlands and abroad is from Dutch banks and from foreign banks that offer investment and corporate banking services. In addition, RBS N.V.'s Corporate and Institutional Banking (CIB) business faces competition from dedicated investment banks and from non-bank institutions via disintermediation in credit and financing products. In European, American and Asian corporate and institutional banking markets RBS N.V. also competes with the large domestic banks active in these markets and with the major international banks.

Risk factors

Set out below is a summary of certain risks which could affect RBSH Group. RBSH Group is a subsidiary of RBSG and accordingly, risk factors which relate to RBSG and the RBS Group will also be of relevance to RBSH Group including RBS N.V.. This summary should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties. A fuller description of these and other risk factors is included on pages 172 to 183.

- RBSH Group is reliant on the RBS Group as it receives capital, liquidity and funding support from the RBS Group and its banking operations function on the RBS Group's integrated global infrastructure, and such reliance will increase as RBSH Group continues to divest a number of its businesses and portfolios.
- The RBS Group's restructuring of its CIB business will impact RBSH Group as well as the planned transfers or sale of a substantial part of the business activities of RBS N.V. and the execution and/or delay in the execution or non-completion of the approved transfers or sale of such business activities may have a material adverse effect on RBSH Group. There is no assurance that RBSH Group will be able to sell and/or run-down the remaining businesses they are seeking to exit or sell asset portfolios either on favourable economic terms to RBSH Group or at all, and RBSH Group will remain exposed to prevailing market conditions as well as risks relating to liabilities, obligations and/or indemnities arising in connection with such sales or transfers.
- Operational risks are inherent in RBSH Group's businesses and these risks will increase as a result of the restructuring of the RBS Group's CIB business. RBSH Group's operations are also highly dependent on its information technology systems and RBSH Group is exposed to the risk of cyber-attacks and other cyber security threats.
- The RBS Group has started implementing the ring-fence of its retail banking operations in the UK which must be in place by 2019, and which may impact RBSH Group if the remaining disposals of its business are not completed by that date.
- RBS Group and RBSH Group are subject to a number of legal, regulatory and governmental actions and investigations. Unfavourable outcomes in such actions and investigations could have a material adverse effect on RBSH Group's operating results, investor confidence or reputation. It is expected that the RBS Group and RBSH Group will continue to have a material exposure to litigation and governmental and regulatory proceedings and investigations in the medium term.
- RBSH Group may be unable to attract or retain senior management (including members of the supervisory board) and other skilled personnel of the appropriate qualification and competence, due to RBS Group's changing strategy, including the restructuring of the RBS Group's CIB business as well as the imposition of restrictions on compensation or other regulatory initiatives. RBSH Group may suffer if it does not maintain good employee relations or as a result of employee misconduct.
- RBSH Group operates in markets that are highly competitive and subject to rapid change. Recent regulatory and legal changes are likely to result in new market participants and changed competitive dynamics in certain key areas and other competitors may have more efficient operations as well as access to lower cost/funding and better client and employee retention rates.
- RBSH Group's businesses and performance can be negatively affected by actual or perceived global economic and financial market conditions and other global risks. RBSH Group is also exposed to any weakening of the European economy and the renewed threat of default by certain countries in the Eurozone.
- RBSH Group's business performance could be adversely affected if its or the RBS Group's capital are not managed effectively or as a result of changes to capital adequacy and liquidity requirements. In addition, RBSH Group's ability to meet its obligations including its funding commitments depends on RBSH Group's ability to access sources of liquidity and funding which may be affected by credit markets and the monetary policies of central banks.
- RBSH Group's borrowing costs, its access to the debt capital markets and its liquidity depend significantly on its and the RBS Group's credit ratings. Any further reductions in the long-term or short-term credit ratings of RBS Holdings, RBS N.V., RBSG, RBS plc or one of their subsidiaries would increase borrowing costs and may limit RBSH Group's access to capital and money markets and trigger additional collateral or other requirements as well as limit the range of counterparties willing to enter into transactions with RBS Holdings and may adversely affect RBSH Group's competitive position.
- RBSH Group's businesses are subject to substantial regulation and oversight. Significant regulatory developments and increased scrutiny by RBSH Group's key regulators has increased compliance risks and has had and is likely to continue to have a material adverse effect on how RBSH Group conducts its business and on its results of operations and financial condition. The RBS Group is also subject to resolution procedures under resolution and recovery schemes which may result in various actions being taken in relation to the RBS Group and any securities of the RBS Group and which may adversely affect RBSH Group.
- The financial performance of RBSH Group has been, and may continue to be, materially affected by deteriorations in borrower and counterparty credit quality and further deteriorations could arise due to prevailing economic and market conditions and legal and regulatory developments. Depressed asset valuations resulting from poor market conditions may also result in further impairment charges and write-downs of RBSH Group's assets. In addition, changes in interest rates, foreign exchange rates, credit spreads, bond, equity and commodity prices, basis, volatility and correlation risks and other market factors have significantly affected and will continue to affect RBSH Group's business and results of operations.

Financial review

Risk factors continued

- The value of certain financial instruments recorded at fair value is determined using financial models incorporating assumptions, judgements and estimates that may change over time or may ultimately not turn out to be accurate. RBSH Group's valuation, capital and stress test models and the parameters and assumptions on which they are based rely on market data inputs and need to be constantly updated to ensure their accuracy. Failure of these models to accurately reflect changes in the environment in which RBSH Group operates or the failure to properly input any such changes could have an adverse impact on the modelled results.
- The legal demerger of ABN AMRO Bank N.V. (as it was then named) has resulted in a cross liability that changes the legal recourse available to investors.

Loss for the year	(100)	(135)	(999)

2014 compared with 2013

Operating loss before tax was €57 million compared with a loss of €142 million in 2013. This decrease was due to lower operating expenses partially offset by lower income, reflecting the transfers of businesses to RBS plc.

Total income decreased by €164 million to €273 million. This is mainly due to lower non-interest income.

Net interest income decreased by €51 million to €187 million, mainly reflecting business transfers and the continued low interest rate environment.

Non-interest income decreased by €113 million to €86 million compared with €199 million in 2013. This included higher losses on the sale of available-for-sale securities in Treasury partially offset by higher profits from interests in associates and an increase in the value of own credit adjustments.

Operating expenses decreased by €218 million to €319 million mainly due to reductions in both staff and non-staff costs as a result of business transfers to RBS plc.

Impairment losses decreased by €31 million to €11 million driven by smaller number of individual cases.

Tax charge for 2014 was €58 million compared with €12 million in 2013.

2013 compared with 2012

Operating loss before tax was €142 million compared with a loss of €887 million in 2012. This decrease was due to lower operating expenses partially offset by lower income.

Total income decreased by €271 million to €437 million. This is mainly due to lower net interest income.

Net interest income decreased by €367 million to €238 million, reflecting further reductions in interest income, in particular in CIB, due to further business transfers to RBS plc and the continued low interest rate environment.

Non-interest income increased by €96 million to €199 million compared with €103 million in 2012. This increase is mainly due to the €776 million lower loss on own credit adjustment resulting from the widening of credit spreads of UK banks. This was partially offset by lower net fees and commissions as a result of business transfers to RBS plc, and lower profit on sales of subsidiaries and associates and securities.

Operating expenses decreased by €993 million to €537 million due to reduced staff and non-staff costs as a result of staff transferring as part of business transfers to RBS plc and business divestments.

Impairment losses decreased by €23 million to €42 million. The 2013 charge is driven by a small number of individual cases. The reduction reflects business transfers to RBS plc.

Tax charge for 2013 was €12 million compared with €129 million in 2012. The higher rate for 2012 was mainly the result of the reduction in carrying value of the deferred tax asset in respect of losses in Australia.

- Domestic	(0.2)	0.4	(0.1)
- Foreign	0.4	1.0	1.6

Net interest margin (4)

- Group	0.7	0.7	0.8
- Domestic	—	0.5	(0.2)
- Foreign	2.1	1.0	1.8

Notes:

(1) Interest payable was decreased in 2013 by €37 million in respect of non-recurring adjustments (2014 and 2012 nil).

(2) Gross yield is the interest rate earned on average interest-earning assets of the banking business.

(3) Interest spread is the difference between the gross yield and the interest rate paid on average interest-bearing liabilities of the banking business.

(4) Net interest margin is net interest income of the banking business as a percentage of average interest-earning assets of the banking business.

(5) The analysis into Domestic and Foreign has been compiled on the basis of location of the office in which the transaction takes place.

Analysis of change in net interest income – volume and rate analysis

Volume and rate variances have been calculated based on movements in average balances over the period and changes in interest rates on average interest-earning assets and average interest-bearing liabilities. Changes due to a combination of volume and rate are allocated pro rata to volume and rate movements.

	2014 over 2013			2013 over 2012

Financial review

Segment performance

In February 2014, RBS Group announced the reorganisation of the previously reported operating divisions into three franchises: Personal & Business Banking, Commercial & Private Banking and Corporate & Institutional Banking (CIB). Only CIB, comprising the former Markets and International Banking divisions, is relevant for RBS N.V.. CIB is a single reportable segment.

RBS Capital Resolution (RCR) was established with effect from 1 January 2014 by the transfer of capital intensive and higher risk assets from previous divisions. Non-Core was dissolved on 31 December 2013. No business lines moved to RCR and so comparative data has not been restated. RCR will be reported separately until wind-down.

The results of each segment are set out below. Services directly attributable costs have been allocated to the operating segments, based on their service usage. Where services span more than one segment an appropriate measure is used to allocate the costs on a basis which management considers reasonable. Services costs are fully allocated and there are no residual unallocated costs.

2014 compared with 2013

Operating profit before tax was €2 million compared with a profit of €5 million in 2013.

Total income decreased by €154 million to €284 million mainly attributable to a decrease in non-interest income.

Net interest income increased by €22 million to €134 million compared with €112 million in 2013.

Non-interest income decreased by €176 million to €150 million in 2014 compared with €326 million in 2013, reflecting reduced deployment of resources.

Operating expenses decreased by €100 million to €281 million compared with €381 million in 2013. This reflected the continued focus on cost savings across both business and support areas and the transfer of businesses to RBS plc.

Impairment losses were €1 million compared with €52 million in 2013, reflecting a low level of new impairments. The impairments in 2013 reflected a small number of single name provisions.

2013 compared with 2012

Operating profit before tax was €5 million compared with a loss of €321 million in 2012. This improvement of €326 million was mainly due to lower operating expenses.

Total income decreased by €498 million to €438 million mainly attributable to a decrease in net-interest income.

Net interest income decreased by €310 million to €112 million compared with €422 million in 2012. This reflects the transfer of businesses to RBS plc.

Non-interest income decreased by €188 million to €326 million in 2013 compared with €514 million in 2012, primarily due to lower fee and trading income as a result of the transfer of businesses to RBS plc. This was offset by lower losses in other operating income.

Operating expenses decreased by €865 million to €381 million compared with €1,246 million in 2012. This reflects the continuing transfer of businesses to RBS plc.

Impairment losses increased by €41 million to €52 million compared with €11 million in 2012. The impairments in 2013 and 2012 reflect a small number of single name provisions.

Financial review

Central items

	2014 €m	2013 €m	2012 €m
Central items not allocated	(106)	(359)	(535)

2014 compared with 2013

Central items not allocated were €106 million compared with €359 million in 2013. Items not allocated in the year mainly relates to the loss on the sale of available-for-sale securities partially offset by an increase in profits from interests in associates.

2013 compared with 2012

Central items not allocated reduced €176 million to €359 million mainly reflecting lower own credit adjustment attributable to the tightening of credit spreads.

2014

Operating profit before tax of €47 million reflects the benefit received from life settlement and project finance income.

Operating expenses of €27 million is largely as a result of costs associated with RCR disposal activity.

The favourable market and economic conditions resulted in an €8 million impairment release.

Non-Core was dissolved on 31 December 2013.

2013 compared with 2012

Operating profit before tax was €212 million compared with a loss of €31 million in 2012, largely due to higher total income, lower expenses and impairment recoveries.

Total income increased by €42 million to €244 million compared €202 million in 2012 mainly due to higher non-interest income.

Net interest income decreased by €79 million to €138 million compared with €217 million in 2012 following continuing Non-Core disposals.

Non-interest income increased by €121 million to €106 million compared with a loss of €15 million in 2012.

Operating expenses decreased by €114 million to €88 million compared with €202 million in 2012, reflecting continuing disposals.

Impairment recoveries were €56 million compared with losses of €31 million in 2012.

Commentary on consolidated balance sheet

2014 compared with 2013

Total assets were €23.5 billion at 31 December 2014, a decrease of €16.3 billion, or 41%, compared with €39.8 billion at 31 December 2013.

Cash and balances at central banks decreased by €2.1 billion or 64% to €1.1 billion at 31 December 2014 reflecting reduced liquidity requirements.

Loans and advances to banks increased by €2.0 billion, or 35%, to €7.7 billion at 31 December 2014 principally due to an increase in balances with fellow subsidiaries.

Loans and advances to customers declined €0.2 billion, or 6%, to €3.5 billion, reflecting repayments and business run-down.

Debt securities and equity shares decreased by €12.3 billion, or 79%, to €3.2 billion at 31 December 2014, mainly reflecting the sale of €9.0 billion of securities held as part of the liquidity portfolio.

Derivative assets decreased by €0.4 billion, or 7%, to €4.4 billion, and derivative liabilities decreased by €1.3 billion, or 22%, to €4.6 billion mainly reflecting reduced deployment of resources.

The decrease in assets and liabilities of disposal groups is due to the completion of transfers to RBS plc in 2014. These businesses were included in held for disposal as at 31 December 2013.

Deposits by banks decreased by €13.8 billion, 73%, to €5.1 billion, with lower repurchase agreements and stock lending (repos), down €11.1 billion to €0.6 billion. This reduction is mainly due to planned reductions in funding from RBS plc in addition to the transfer of businesses to RBS plc during the year.

Customer accounts were down €1.2 billion, 29%, to €2.9 billion, mainly reflecting balance sheet reduction in CIB and RCR.

Debt securities in issue declined €0.3 billion, 23%, to €1.0 billion largely reflecting decreases in medium-term-notes in CIB.

Owners' equity increased by €0.5 billion, 18%, to €3.5 billion, largely due to favourable mark-to-market movements on available-for-sale debt securities offset by an ordinary dividend of €300 million.

2013 compared with 2012

Total assets were €39.8 billion at 31 December 2013, a decrease of €31.1 billion, or 44%, when compared with €70.9 billion at 31 December 2012.

Cash and balances at central banks increased by €0.9 billion or 39% to €3.2 billion at 31 December 2013.

Loans and advances to banks decreased by €6.5 billion, or 53%, to €5.7 billion at 31 December 2013 principally due the transfer of businesses to RBS plc during the year.

Loans and advances to customers declined €2.6 billion, or 41%, to €3.8 billion. This reflected the transfer of businesses to RBS plc during the year, in particular within CIB.

Debt securities decreased by €7.4 billion, or 33%, to €15.3 billion, reflecting bond maturities, the transfer of businesses to RBS plc and the sale of part of the liquidity portfolio.

Equity shares decreased by €0.8 billion, or 74%, to €0.3 billion. This reflected the transfer of businesses to RBS plc.

Derivative assets decreased by €2.8 billion, or 37%, to €4.8 billion, and Derivative liabilities decreased by €3.8 billion, or 39%, to €5.9 billion, this was largely attributable to the transfer of businesses to RBS plc.

The decrease in assets and liabilities of disposal groups is due to the completion of transfers to RBS plc in 2013. These businesses were held for disposal as at 31 December 2012.

Deposits by banks decreased by €15.5 billion, 45%, to €18.9 billion, with lower repurchase agreements and stock lending (repos), down €0.9 billion, 7%, to €11.7 billion. This reduction is mainly due to the transfer of businesses to RBS plc during the year. In addition the decrease is due to planned reductions in funding from RBS plc.

Customer accounts were up €1.5 billion, 57%, to €4.2 billion.

Debt securities in issue declined €1.3 billion, 49%, to €1.3 billion largely decreases in notes and commercial paper reflecting reduced positions in CIB and Treasury.

Owners' equity increased by €1.1 billion, 64%, to €2.9 billion, largely due to favourable mark-to-market movements on available-for-sale debt securities, offset by the attributable loss in the year.

Presentation of information

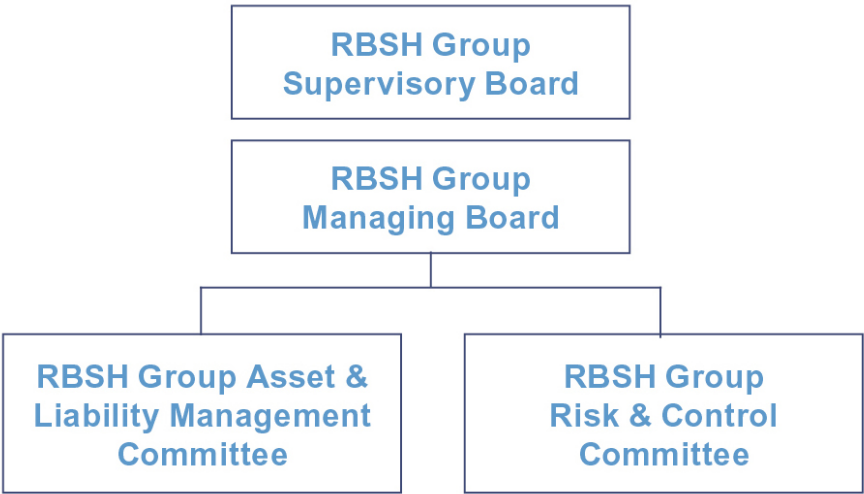

Except as otherwise indicated by an asterisk (*), information in the Capital and risk management section (pages 23 to 72) is within the scope of the Independent auditor's report.

Capital and risk management are conducted on an overall basis within RBS Group. Therefore the discussion on Capital and risk management on pages 23 to 72 refer principally to policies and procedures in RBS Group that also apply to RBSH Group and RBS N.V..

Risk governance*

Governance structure

Capital and risk management strategies are owned and set by the Managing Board of RBSH Group and are implemented by the executive management. There are a number of committees and executives that support the execution of the business plan and strategy. Two of these committees are dedicated to RBSH Group and report to the RBSH Group Managing Board. These are depicted and described in the structure chart and table below. Matters not specifically delegated are reserved for the Managing Board. The members of the Managing Board and Supervisory Board of RBS Holdings and RBS N.V are the same

There are also risk functions and committees that cover RBS Group and (parts of) RBSH Group and RBS N.V. reflecting the integrated manner in which the business is managed within RBS Group. Service Level Agreements are in place between RBSH Group and RBS Group to accommodate this integrated risk management oversight, including escalation procedures to the RBSH Group Managing Board as appropriate.

During 2014 the RBSH Group Chief Risk Officer had a reporting line into the CRO of Divested Businesses.

Risk management within RBSH Group focuses on all material risks including credit, market, operational, regulatory and country risk and business activities. Liquidity risk and the day-to-day management of liquidity and funding of the book are the responsibility of RBSH Group Treasury.

For a summary of the main risk types faced by RBSH Group and how it manages each of them, refer to pages 31 and 32.

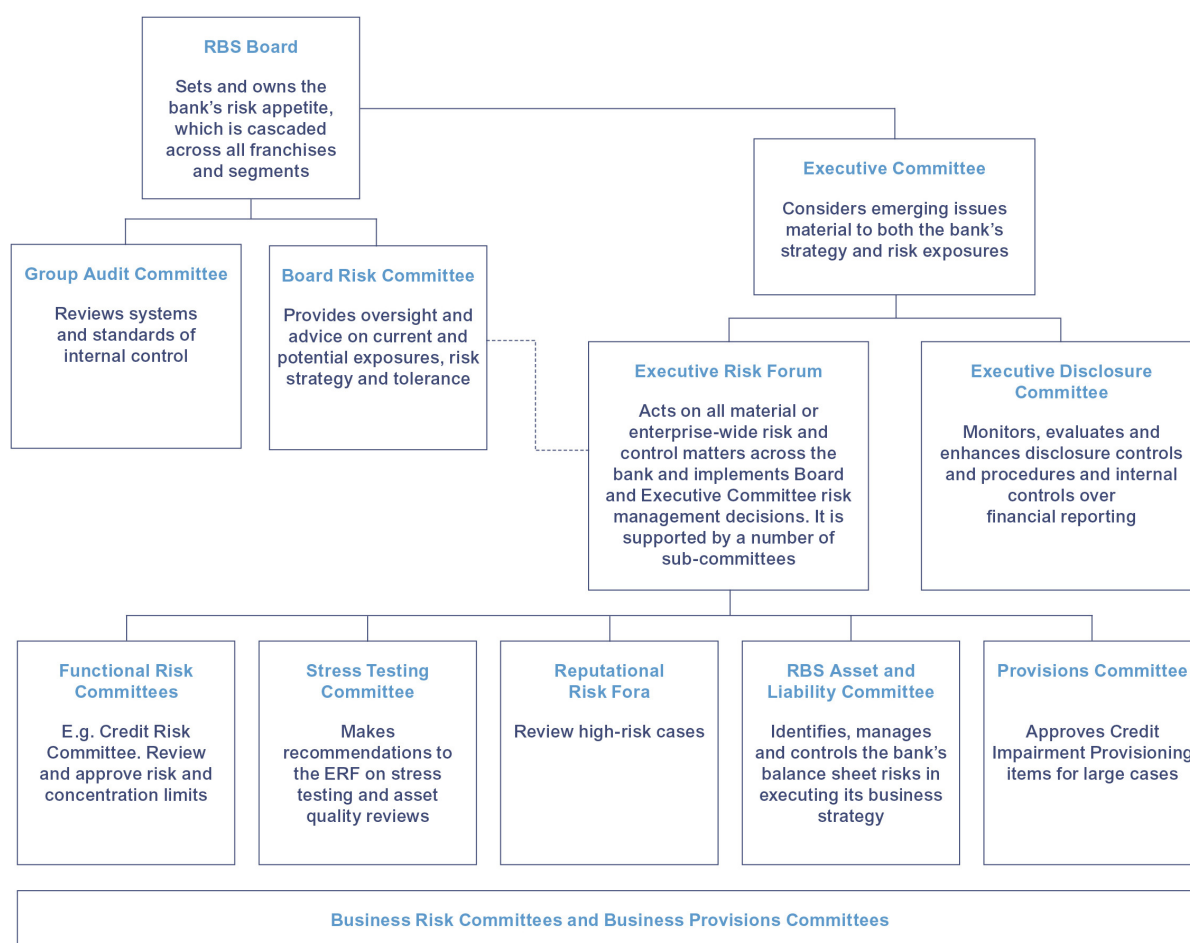

*unaudited

Risk governance* continued

RBS Group governance structure

RBS Group is committed to achieving the highest standards of corporate governance in every aspect of its business, including risk management. A key aspect of the Board's responsibility as the main decision-making body is the setting of risk appetite (refer to page 29 for more information on risk appetite) to ensure that the levels of risk RBS Group is willing to accept in the attainment of its strategic business and financial objectives are clearly understood. The Board delegates authority for risk management to specific committees.

The risk governance structure and the main purposes of each of the committees is illustrated below:

*unaudited

Financial review Capital and risk management

The following table shows details of the key RBS N.V. Board and Committees and their responsibilities.

Board/Committee	Responsibilities
Supervisory Board Membership: Consists of three members. Three are executives of RBS Group.	The Supervisory Board is responsible for supervising RBS N.V.'s management and RBS N.V.'s general affairs and the business connected with it as well as for advising the Managing Board.
Managing Board Membership: Four members led by the RBS N.V. Chairman, RBS N.V. Chief Administrative Officer (CAO), RBS N.V. Chief Financial Officer (CFO), RBS N.V. Chief Risk Officer (CRO)	Reports to the Supervisory Board. It is the principal decision-making forum for RBS N.V., setting policy framework, operating structure and yearly plan (including objectives and budgets). All members of the Managing Board have responsibility for RBS N.V.. As well as their overall corporate responsibilities, the members of the Managing Board manage one or more units, for which they have primary responsibility.
RBS N.V. Risk and Control Committee (RCC) Membership: Chaired by the RBS N.V. CRO. Members include Chairman Managing Board, RBS N.V. CFO, Senior N.V. Risk Manager, N.V. delegate of RBS Group Credit, Market, and Operational Risk, RBS N.V. Head of Conduct & Regulatory Affairs, Chief Risk Officer Asia.	The responsibilities of the RCC include: <ul style="list-style-type: none"> • Advising the Managing Board on the risk appetite of RBS N.V. and receiving direction from the Managing Board on the risk appetite; • Providing input to RBS N.V. risk-appetite-setting process in the context of the Group's overall risk appetite; • Overseeing the risk framework within RBS N.V. and report directly to the RBS N.V. Managing Board on the performance of the framework and on issues arising from it; • Monitoring the actual risk profile of RBS N.V., ensuring that this remains within the boundaries of the agreed risk appetite or else escalating excesses to the RBS N.V. Managing Board. Prior to escalation, the RCC can ask the appropriate risk committee in RBS Group or in the business that normally monitors and controls the risk item to address any excess. • The remit of the Committee also includes Credit, Market, Operational and Regulatory Risk within RBS N.V.. Changes to the Terms of Reference of the RBS N.V. RCC must be approved by the RBS N.V. Managing Board. To execute its authority the RCC has access to all relevant risk information relating to RBS N.V. available within RBS Group including escalations from and to Group or segmental Committees.
RBS N.V. Asset and Liability Committee (ALCo) Membership: Seven permanent voting members led by the RBS N.V. Chairman for the Managing Board, RBS N.V. CFO, RBS N.V. CAO, RBS N.V. CRO, RBS N.V. Treasurer, RBS Group Treasurer and Global Head of Equity and Liquidity.	The mandate of ALCo covers the following specific areas in respect of RBS N.V.: <ul style="list-style-type: none"> • The overall governance responsibility for the strategic management of the RBS N.V. Balance Sheet; • The review, approval and allocation of balance sheet, capital, liquidity and funding limits; • The liquidity, funding, foreign exchange and interest rate exposures of RBS N.V.'s balance sheet; • The balance sheet structure and risk-weighted assets position of RBS N.V.; • Decisions on capital repatriation and loss coverage; • Compliance with all regulatory requirements at all times; • The implementation and maintenance of transfer pricing policies (although setting the liquidity spread curve remains the responsibility of the RBS Group ALCo); • The approval and implementation within RBS N.V. of RBS Group Treasury policies and procedures; and • RBS N.V. ALCo is responsible for oversight of retained business (shared assets) and residual ABN AMRO business.

Risk governance* continued

Three lines of defence

The three lines of defence model is used industry-wide for the management of risk. It provides a clear set of principles by which to implement a cohesive operating model, one that defines accountabilities and responsibilities for managing risk across the organisation.

First line of defence - Management and supervision

The first line of defence includes customer franchises, Technology and Operations and support functions such as HR and Communications.

Responsibilities include:

- Owning, managing and supervising, within a defined risk appetite, the risks which exist in the business area.
- Ensuring appropriate controls are in place to mitigate risk: balancing control, cost, customer service and competitive advantage.
- Ensuring that the culture of the business supports balanced risk decisions and compliance with policy, laws and regulations.
- Ensuring that the business has effective mechanisms for identifying, reporting and managing risk and controls.

Second line of defence - Oversight and control

The second line of defence includes RBS Group Risk Management and RBS Group Conduct and Regulatory Affairs.

Responsibilities include:

- Owning and developing the risk and control policies, limits and tools for the business to use to discharge its responsibilities.
- Overseeing and challenging the management of risks and controls.
- Leading the design, development and communication of the bank's risk culture and appetite.
- Analysing the aggregate risk profile and ensuring that risks are being managed to the desired level (risk appetite).
- Providing expert support and advice to the business on risk management.
- Providing senior executives with relevant management information and reports and escalating concerns where appropriate.
- Undertaking assurance.

Third line of defence - Internal Audit

Responsibilities include:

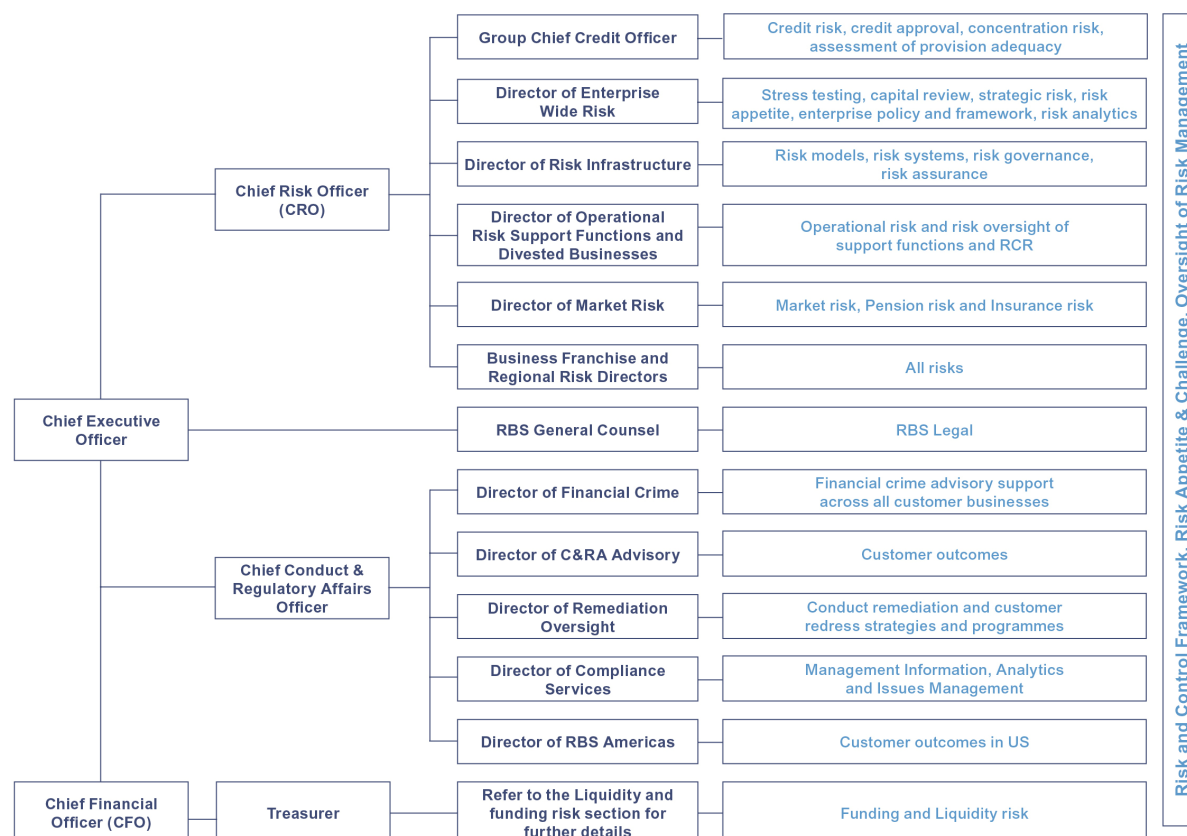

- Providing assurance on the key risks to the organisation by assessing the entire control framework.
- Holding RBS Group Risk Management accountable for establishing an appropriate risk management framework.

*unaudited

Financial review Capital and risk management

Management structure

RBS Group's management structure and the main elements of each role are illustrated below.

Notes:

- (1) RBS Group Risk Management
The RBS Group Chief Risk Officer (CRO) leads RBS Group Risk Management. The CRO reports directly to the RBS Group Chief Executive and the Board Risk Committee, with a right of access to the Chairman of the Board Risk Committee.

RBS Group Risk Management is an independent function, structured by risk discipline to facilitate the effective management of risk.

In 2014, Risk Management, which had previously been spread across the different business segments, re-organised itself into five functional areas: Operational Risk, Support Functions & Divested Businesses; Credit Risk; Market Risk; Enterprise-Wide Risk Management and Risk Infrastructure. Directors of Risk were also appointed for each of the franchises and for Services. The streamlined structure consolidates risk information, allowing for more efficient decision-making.

The directors of risk functions are responsible for RBS Group-wide risk appetite and standards within their respective disciplines and report directly to the CRO.

CROs are in place for certain jurisdictions and legal entities to meet local regulatory and governance requirements. They lead the risk management teams locally in support of functional risk heads where teams follow a functional operating model. The key CRO roles report directly to the RBS Group CRO.

Risk committees in the customer businesses oversee risk exposures arising from their business activities and focus on ensuring that they are adequately monitored and controlled.

- (2) Conduct and Regulatory Affairs
Conduct & Regulatory Affairs (C&RA) is led by the Chief Conduct & Regulatory Affairs Officer, who reports directly to the Chief Executive. It is responsible for providing oversight of conduct risk and regulatory risk at RBS Group, and does so by setting bank-wide policy and standards, providing advice to each customer business, and ensuring that the mitigating controls are suitable. C&RA also provides leadership of the bank's relationships with its regulators.

The functional heads (the directors of Remediation, Compliance Services, RBS Americas, Financial Crime, Regulatory Affairs and Advisory) report directly to the Chief Conduct & Regulatory Affairs Officer. Each is responsible, where appropriate, for the bank-wide risk appetite and standards of their respective areas:

A Chief Compliance Officer in each franchise, reporting to the Director of C&RA Advisory, provides advisory support to assist businesses in their management of conduct, regulatory affairs and financial crime.

*unaudited

Risk appetite and culture*

Risk appetite

RBS N.V.'s risk appetite establishes the level and type of risk that it is willing to accept in order to meet its strategic objectives and its wider obligations to stakeholders.

RBS N.V. has developed a framework that sets and implements an appropriate risk appetite supported by a regular monitoring and review process. A risk appetite statement setting out overall risk limits for different risk types is approved by the Supervisory Board. Risk appetite limits and risk exposures are reported monthly to the Risk & Control Committee, the Managing Board and the Supervisory Board. Any limit breach is reported to the Managing Board. The Managing Board may grant a temporary waiver or require the position to be adjusted to comply with the risk limit.

Strategic risk objectives

Risk management plays an integral role in the delivery of strategic goals. The implementation of a stronger and more effective culture of risk management and control provides the platform necessary to address vulnerabilities, rebuild on core strengths and position RBS Group on a sustainable and profitable path for future growth.

Financial strength and resilience are at the heart of the strategic plan. RBS Group has defined this level of robustness as that which is capable of achieving and sustaining a standalone credit rating (i.e. without government support) that is in line with those of its strongest international peers.

Given this central aim, the RBS Group Board has set out four key strategic objectives, aligned with the strategic plan:

- Maintain capital adequacy.
- Deliver stable earnings growth.
- Ensure stable and efficient access to funding and liquidity.
- Maintain stakeholder confidence.

Each objective is essential in its own right, but also mutually supportive of the others. The strategic risk objectives are the bridge between the RBS Group-wide business strategy and the frameworks, limits and tolerances that are used to set risk appetite and manage risk in the business franchises on a day-to-day basis.

This is how the strategic plan is brought to life in our management of risk:

Risk appetite measures

A range of different but complementary tools has been developed to measure whether strategic plans are consistent with risk appetite, to test broader 'what if' questions and to assess the impact of changes in key assumptions:

- Stress testing - assesses how earnings, capital and funding positions change under an unfavourable, yet plausible, scenario. Stress scenarios can differ by theme, geographical location or severity.
- Economic capital - provides complementary insights, with a breadth of understanding of risk profile changes and 'tail risks' across millions of different modelled scenarios.
- Sensitivity analysis - provides 'ready reckoners' around changes in key variables. It offers a high-level view on questions such as 'what if gross domestic product worsened by a further 1%', identifying certain tipping points where the bank's risk profile moves outside appetite.

*unaudited

Risk control frameworks and limits

Risk control frameworks and their associated limits are an integral part of the risk appetite framework and a key part of embedding risk appetite targets in day-to-day risk management decisions. The risk control frameworks manage risk by expressing a clear tolerance for material risk types that is aligned to business activities.

The Group Policy Framework directly supports the qualitative aspects of risk appetite, helping to rebuild and maintain stakeholder confidence in RBS Group's risk control and governance. Its integrated approach is designed to ensure that an appropriate standard of control is set for each of the material risks it faces, with an effective assurance process put in place to monitor and report on performance. Risk appetite has its own policy standard within the Group Policy Framework. This standard sets out clear roles and responsibilities to set, measure, cascade and report performance against risk appetite, and provides assurances that business is being conducted within approved risk limits and tolerances.

Culture, values and remuneration

Objectives for risk culture

The establishment of a strong risk culture is essential to the realisation of RBS Group's ambition to build "a truly customer-centric bank". A strong risk culture is a key part of ensuring risk appetite is effectively embedded across RBS Group. The link between risk appetite and strategic objectives encourages people at all levels of the business to think about risk, how they identify it and how they manage it. It incorporates the quantitative and qualitative aspects of risk and uses both absolute and relative risk measures.

Risk culture policies

A core principle behind the development of the risk appetite framework is that risk appetite contributes to a strong risk management culture, in which risk is clearly and meaningfully aligned with business behaviours and outcomes. RBS Group's values - of "serving customers", "working together", "doing the right thing" and "thinking long term" - act as a clear starting point for a strong and effective risk culture. A wide range of communication and engagement activities (detailed below) has been undertaken to discuss the meaning of each value with employees and how they affect and guide day-to-day activities.

The embedding of RBS Group's values into a strong risk culture is supported by a revised and more focused Code of Conduct. The Code provides guidance on expected behaviour and sets out the standards of conduct that support the values. It explains the effect of decisions that are taken and describes the principles that must be followed.

These business principles cover conduct-related issues as well as wider business activities. They focus on desired outcomes, with practical guidelines to align the values with commercial strategy and actions. The embedding of business principles facilitates sound decision making and a clear focus on good customer outcomes in 'the moments that matter'. It is aligned with the people management and remuneration processes to support a positive and strong risk culture through appropriate incentive structures.

*unaudited

A simple decision-making guide (called the "YES check") has been included in the Code of Conduct. It is a simple, intuitive set of five questions, designed to ensure the values guide day-to-day decisions:

- Does what I am doing keep our customers and RBS Group safe and secure?
- Would customers and colleagues say I am acting with integrity?
- Am I happy with how this would be perceived on the outside?
- Is what I am doing meeting the standards of conduct required?
- In five years' time would others see this as a good way to work?

Each question is a prompt to think about the situation and how it fits with RBS Group's values. It ensures that employees can think through decisions that do not have a clear answer, guiding the judgements behind their decisions and actions.

Training

Across the risk management function, a series of events and activities have been undertaken to bring alive the bank's values and culture for employees. This is supported by performance management processes that hold individuals to account for poor behaviour and reward the behaviour that supports the bank's purpose, vision and values.

RBS Group Risk Management runs a Risk Academy which helps to train staff and to spread a common risk culture across the bank. Training plans are aligned with Risk function strategy to ensure staff have the skills and capabilities to support business and to meet changing regulatory and policy requirements.

Risk-based key performance indicators

RBS Group-wide remuneration policy requires remuneration to be aligned with, and to support, effective risk management. The policy ensures that the remuneration arrangements for all employees reflect the principles and standards prescribed by the UK Remuneration Code. For further information refer to page 143.

Financial review Capital and risk management

Risk appetite and culture* continued

Risk coverage

The main risk types faced by RBS N.V. are presented below.

Risk type	How the risk arises	2014 overview
Conduct and legal risk	<p>Conduct risk can result in fines and reputational damage if customers are not treated in line with their and other stakeholders' expectations.</p> <p>Conduct risk exists across all stages of RBS N.V.'s relationships with its customers, from sales through service delivery to post-sales processes. It also exists in the activities RBS Group undertakes to manage its business, from the development of business strategies, through governance and human resource management. Conduct risk also exists if RBS N.V. does not take effective action to prevent fraud, bribery and money laundering.</p>	RBS Group continued to remediate historical conduct issues, while also restructuring its customer-facing businesses and support functions around the needs of its customers. In RBS N.V. (legacy) rate setting has also been the primary focus from a conduct perspective. Although the impact of conduct risk is considered less of a concern for RBS N.V. at the end of 2014, it remains of high priority due to its importance to RBS values.
Regulatory risk	Regulatory risk arises from RBS N.V.'s regulatory, business or operating environments and from how it responds to them.	The level of regulatory risk remained high for RBS Group as policymakers and regulators continued to strengthen regulations and supervision in response to the events of 2007 and 2008. For RBSH, regulatory risk is continuously decreasing as a result of significant reduction of the balance sheet of RBSH and the on-going sale of front line businesses.
Operational risk	Operational risk may arise from a failure to manage operations, transactions and assets appropriately. It may arise from human error, an inability to deliver change on time or adequately, or the unavailability of technology services or the loss of customer data. Fraud and theft are sources of operational risk, as is the impact of natural and man-made disasters. It may also arise from a failure to take appropriate measures to protect assets or take account of changes in law.	<p>To ensure operational risk is managed in a more standardised and consistent manner, work was started to enhance the operational risk management framework (ORMF).</p> <p>The threat to the security of RBS Group's information from cyber attacks is a key focus for operational risk as well as measures to address weaknesses after the major IT incident of 2012.</p>
Capital adequacy risk	Capital adequacy risk arises from inefficient management of capital resources.	RBS N.V.'s Core Tier 1 ratio on a CRR transitional basis was 16.2%. RBS N.V. plans for and maintains an adequate amount and mix of capital consistent with its risk profile. The amount of capital required is determined through risk assessment and stress testing.
Liquidity and funding risk	<p>Liquidity and funding risk arise through the maturity transformation role that banks perform. RBS N.V. exposed to capital adequacy risk if it manages its capital resources inefficiently.</p> <p>Liquidity and funding risk arises from day-to-day operations.</p>	As one of the primary operating entities of the RBS Group, RBS N.V.'s liquidity risk is monitored and managed centrally by RBS Group in line with policies and processes set by RBS N.V.'s Managing Board.
Reputational risk	Reputational risk can arise from the conduct of either RBS N.V. as a whole or that of the individuals it employs; as well as its wider conduct, policies and practices.	The most material threat to RBS N.V.'s reputation continued to originate from historical conduct deficiencies. RBS N.V. has been the subject of investigations and review in relation to (legacy) rate setting concerns, some which have resulted in dismissals.

*unaudited

Financial review Capital and risk management

Risk type	How the risk arises	2014 overview
Credit risk	The risk that RBS N.V. will incur losses owing to the failure of a customer or counterparty to meet its obligations to settle amounts outstanding.	RBS N.V. manages credit risk based on a suite of credit approval and risk concentration frameworks and associated risk management systems and tools. Credit risk RWAs were €18.2 billion at 31 December 2014.
Market risk	<p>The majority of RBS N.V.'s traded market risk exposure arises in CIB and RCR through transactions in financial instruments including debt securities, loans, deposits and equities, as well as securities financing and derivatives.</p> <p>The majority of its non-traded market risk exposure arises from commercial banking activities from assets and liabilities that are not classified as held for trading.</p>	Market risk RWAs remained broadly flat at €1.2 billion.
Country risk	<p>Country risk arises from possible economic or political events in each country to which RBS N.V. has exposure, and from unfavourable conditions affecting daily operations in a country.</p> <p>It has the potential to affect all parts of RBS N.V.'s portfolio across wholesale and retail activities that are directly or indirectly linked to the country in question.</p> <p>The activities of several customer businesses, particularly CIB, expose RBS N.V. to country risk.</p>	RBS N.V. maintained a cautious stance as many clients continued to reduce debt levels. Balance sheet exposure to the eurozone countries continued to fall, and was down €6.8 billion to €2.5 billion reflecting risk reduction and capital management focus.
Business risk	Business risk exists at all levels of the organisation and is generated at the transaction level. It is affected by other risks RBS N.V. faces, which could contribute to any adverse changes in the bank's revenues or costs.	RBS N.V. reduced its business risk profile as it made disposals through RCR, sold a large part of its Liquidity Portfolio and transferred out its business in Thailand.
Strategic risk	Strategic risk arises from strategic decisions that fail to reflect the operating environment, or which do not take adequate account of execution challenges. These include decisions related to the RBS Group products and services which have implications for profitability, risk, the customer base, and for business growth.	RBS Group announced the results of a strategic review with a defined plan to shift the business mix towards the UK and the retail and commercial banking segments, with the aim of a lower risk profile.

*unaudited

Conduct risk*

Definition

Conduct risk is the risk that the behaviour of RBS N.V. and its staff towards customers, or in the markets in which it operates, leads to unfair or inappropriate customer outcomes and results in reputational damage, financial loss or both. The damage or loss may be the result of breaches of regulatory rules or laws, or of failing to meet customers' or regulators' expectations.

Sources of risk

Conduct risk exists across all stages of RBS N.V.'s relationships with its customers, from the development of its business strategies, through governance arrangements, to post-sales processes. Activities through which conduct risk may arise are diverse and include product design, marketing and sales, complaint handling, staff training, and handling of confidential and non-public price sensitive information. Conduct risk also exists if RBS N.V. does not take effective action to prevent fraud, bribery and money laundering.

Governance

Effective conduct risk management is a commercial imperative for the bank: customers, clients and counterparties demand it as a precursor to building trust.

Conduct & Regulatory Affairs (C&RA) is responsible for defining appropriate standards of conduct, and for designing the framework for managing conduct risk, driving adherence, and overseeing remediation activity. It also provides appropriate controls, challenge and oversight to ensure good customer outcomes. In so doing, C&RA acts as a second line of defence control function.

Key elements of the governance structure are set out below:

- The C&RA Executive Committee considers emerging issues material to the C&RA strategy, and implements Board and Executive Committee risk management policy decisions; and
- The Financial Crime Accountable Executive Committee (accountable to the Executive Risk Forum) ensures that the customer businesses and the Services function fulfil strategic objectives by identifying and managing their financial crime risks effectively.

Controls and assurance

Under the RBS Group Policy Framework, C&RA owns 26 conduct risk policies, grouped under employee, corporate and market conduct, and; and conduct towards customers. Each policy is designed to provide both high-level direction and RBS Group-wide requirements. The policies and chapters are designed to ensure RBS Group meets its regulatory obligations; and to provide the necessary clarity for staff on their conduct obligations.

Assurance and monitoring activities are essential to help measure the extent to which RBS Group manages its delivery of specific customer outcomes. During 2014, in addition to the provision of risk-based assurance over key conduct, financial crime, systems and infrastructure topics, the C&RA assurance function provided RBS Group-wide assurance in support of Financial Conduct Authority (FCA) attestations, principally those relating to complaints and anti-money laundering (AML).

*unaudited

Risk assessments are used to identify material conduct risks and key controls across all business areas. The risk assessment process is designed to confirm that risks are effectively managed and prioritised and controls are tested to verify that they operate effectively.

Scenario analysis is used to assess the impacts of extreme but plausible conduct risks including financial crime. The scenarios assess the exposures that could significantly affect RBS Group's financial performance or reputation and are an important component in the operational risk framework and capital model.

Risk appetite

RBS Group has articulated a customer-focused vision to be the leading UK bank for trust, customer service and advocacy by 2020. In line with this, C&RA has evolved from focusing on policy compliance towards considering the wider business implications of placing customers at the heart of the business.

A conduct risk appetite framework is being developed to ensure that RBS Group's risk profile is based on its strategic risk objectives, with quantitative targets supplemented by qualitative criteria focused on attaining good customer outcomes, upholding market integrity, meeting stakeholder expectations and promoting a strong risk culture. Work to refine and embed the risk appetite framework and associated control processes continues in 2015.

Risk monitoring and measurement

C&RA works closely with the customer facing businesses to assess business models, strategy and products and influence better outcomes for customers.

RBS Group's senior boards and committees receive updates on conduct risk exposures and action plans through monthly C&RA initiated reporting. The reporting has been enhanced to be more focused, forward-looking and action-oriented.

An annual Money Laundering Reporting Officer's Report is submitted to the RBS Group Board and the FCA. Covering the operation and effectiveness of the systems and controls in place to comply with Anti-Money Laundering law and regulation, it also describes RBS Group's AML framework. In addition, it covers the systems and controls in place to prevent the financing of terrorism and to ensure compliance with sanctions as well as embargoes and export controls imposed by the UN, governments and other supranational bodies.

The RBS Group Audit Committee is provided with an annual Whistleblowing Update Report. It details cases by internal reporting categories based on the Public Interest Disclosure Act (1998) category, identifies underlying causal and subject trends, and highlights the outcome of investigations and actions taken.

C&RA is working with the business franchises to define the data required to ensure appropriate customer outcomes are delivered and are compliant with the Basel Committee on Banking Supervision principles for effective risk data aggregation and risk reporting. RBS Group's ability to aggregate, analyse and report conduct risk internally is being enhanced so it can assess the effectiveness of mitigating actions.

Operational risk*

Definition

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or external events. It arises from day-to-day operations and is relevant to every aspect of the business.

Operational risks may have a direct customer or reputational impact (for example, a major IT systems failure or fraudulent activity) or both. Operational risk failures may also have a link with conduct risk as evidenced by customer complaints made in connection with Payment Protection Insurance.

Sources of risk

Operational risk may arise from a failure to manage operations, transactions and assets appropriately. It may arise from forms of human error, an inability to deliver change on time or adequately, or the unavailability of technology services or the loss of customer data. Fraud and theft are sources of operational risk, as is the impact of natural and man-made disasters. It may also arise from a failure to take appropriate measures to protect assets or take account of changes in law.

Governance

A strong operational risk management function is vital to support profitability. Better management of operational risk directly supports RBS Group's strategic objective of improving stakeholder confidence and is vital for stability and reputational integrity.

The operational risk function, an independent second line of defence, plays a leadership role and seeks to achieve a robust risk management framework and culture across the bank.

The operational risk function is responsible for the design and maintenance of the Operational Risk Management Framework. The Operational Risk Policy and associated standards are incorporated in the RBS Group Policy Framework and provide direction for the consistent identification, assessment, management, monitoring and reporting of operational risk.

The Operational Risk Executive Committee (OREC), which is a sub-committee of the Executive Risk Forum, acts on all operational risk matters. This includes; identifying and assessing material operational risks, encompassing both current and emerging material risks; reviewing and monitoring the operational risk profile; and reviewing and approving material policy changes.

Controls and assurance

Control Environment Certification (CEC) is used to review and assess the internal control framework.

Risk appetite

RBS N.V.'s operational risk appetite statement is agreed by the RBS N.V. Managing and Supervisory Boards. It comprises a number of specific measures of risk. To confirm that RBS N.V. operates within the set risk appetite, the high-level statement is supplemented by specific tolerances for different types of operational risk. Operational risk appetite measures and frameworks are reviewed regularly and approved by the Supervisory Board.

*unaudited

The objective of operational risk management is not to remove operational risk altogether, but to manage it to an acceptable level, taking into account the customer journey and the cost of minimising the risk against the resultant reduction in exposure. Strategies to manage operational risk include avoiding undertaking a particular type of activity or operating in a particular market; transferring the risk to a third party; accepting the risk as a cost of doing business; or mitigating the risk by implementing controls.

Risk identification and assessment

Risk assessments are used to identify and assess material operational risks and key controls across all business areas. To provide a consistent categorisation of risks and controls across RBS Group and to support identification of risk concentrations, all risks and controls are mapped to the risk taxonomy and the control catalogue. Risk assessments are refreshed at least annually to ensure they remain relevant and capture any emerging risks.

The process is designed to confirm that risks are effectively managed and prioritised in line with the stated risk appetite. Controls are tested frequently to verify that they remain fit for purpose and operate effectively. Risk assessments are typically commenced in a workshop, bringing together subject matter experts and key stakeholders from across the bank. Financial and non-financial risk impacts are captured and a risk appetite decision is made.

In 2014 there was a continued focus on implementing and embedding risk assessments across the bank. This included the strengthening of links between risk assessments and other elements of the operational risk framework. In 2015, the risk framework will be further enhanced.

The New Product Risk Assessment (NPRA) process aims to ensure that the risks represented by new products (and material variations to existing products) are identified and assessed before launch. There is now a requirement to demonstrate that all products provide fair outcomes to customers.

Risk mitigation

Risks are mitigated by a suite of regularly assessed controls but, where the residual exposure is outside of risk appetite, the relevant customer business must decide how to reduce it.

RBS Group purchases insurance to provide the business with financial protection against specific losses and to comply with statutory or contractual requirements.

Risk monitoring

Monitoring and reporting are part of RBS Group's operational risk management processes, which aim to ensure that risks and issues are identified, escalated and managed quickly.

Risk measurement

Scenario analysis is used to assess the impact of extreme but plausible operational risks and is a key input to the capital model. It provides a forward-looking basis for managing risk exposures, with a structured and consistent approach to scenario scoping and measurement.

Operational risk* continued

Event and loss data management

The event and loss data management process aims to ensure compliance with standard requirements for the management of operational risk events and the capture of loss data. It also entails reporting operational risk events that meet defined threshold criteria to RBS N.V. senior management. RBS Group has continued to focus on the timely and accurate capture of operational risk losses; the use of a single RBS Group-wide repository of operational risk events; and the escalation of material operational risk events.

All losses and recoveries associated with an operational risk event are reported against their financial accounting date. A single event can result in multiple losses (or recoveries) that may take time to crystallise. Losses and recoveries with a financial accounting date in 2014 may relate to events that occurred, or were identified in, prior years.

Capital

RBS N.V. calculates the Pillar 1 capital requirement for operational risk using the standardised approach. For 2014, RBS N.V.'s minimum Pillar 1 capital requirement was €58 million.

Regulatory risk*

Definition

Regulatory risk is the risk of material loss or liability, legal or regulatory sanctions, or reputational damage, resulting from the failure to comply with (or adequately plan for changes to) relevant official sector policy, laws, regulations, or major industry standards.

Sources of risk

Regulatory risk arises from the regulatory, business or operating environment and from RBS N.V.'s response to it.

Governance

C&RA maintains well-established policies and supporting processes to ensure timely identification of, and effective responses to, changes in official requirements affecting the bank. C&RA also maintains a structured and open engagement with regulators. That engagement underpins a range of other policies and processes that address on-going compliance with regulatory obligations (refer to the section on conduct risk for further information).

To help manage the risks, the Mandatory Change Advisory Committee (MCAC), chaired by C&RA, was established. The MCAC reports to the Bank-Wide Investment Committee, and comprises representatives of the bank's customer businesses and functions. The MCAC acts as the 'reception committee' for reviewing externally mandated changes that may affect RBS Group and recommending appropriate responses, including the timely mobilisation of change implementation activities. In doing so, it agrees business or function owners of individual risks; and commissions and reviews impact assessments from customer businesses and functions. RBS Group Board and Executive Committee oversight of changes to regulatory requirements is supported by the MCAC (refer to above).

*unaudited

C&RA's Regulatory Developments team maintains and develops RBS Group Political, Legislative and Regulatory Environment Policy and supporting documents, together with associated processes, tools and governance. It also oversees the regulatory developments operating framework, to ensure it meets the needs of all businesses and functions, and maintains the Relationships with Regulators Policy.

Risk appetite

RBS Group believes that maintaining a strong regulatory risk framework is fundamental to ensuring sustainable growth, rebuilding its reputation and maintaining stakeholder confidence. Accordingly, its stated regulatory risk and compliance risk appetite is for no material or widespread breaches of rules, expectations, regulations or laws, individually or in aggregate. However, it also recognises that genuine errors occur, and so it accepts limited, non-material regulatory risk and subsequent loss.

Risk monitoring and measurement

C&RA ensures appropriate reporting of all material regulatory reviews and other regulatory developments worldwide to the appropriate bank-wide committees, including the RBS Group Board, the RBS Group Audit Committee, and the RBS Group Risk Committee. Half-yearly reporting to the Group Audit Committee also captures all material investigations and tracks the status of, and trends in, key regulatory relationships.

Regulatory risk remained a high priority during 2014, as policymakers and regulators continued to strengthen regulation and supervision in response to the events of 2007 and 2008. This resulted in high levels of interaction between RBS Group and supervisory authorities through meetings, requests for information, visits and investigations, as well as in policy developments and proposals for new rules.

Risk mitigation

C&RA also communicates information on regulatory developments and follow-up engagement with customer-facing businesses and functions, helping them identify and execute any required mitigating changes to strategy or business models. The key regulatory policies are reviewed annually.

Early identification and effective management of changes in legislation and regulation, as well as other requirements, is critical to the successful mitigation of regulatory risk. All regulatory and compliance changes are managed to ensure timely compliance readiness. Those changes assessed as having a 'high' or 'medium-high' impact are managed especially closely, with the aim of mitigating the impact through, for instance, changes to strategy or business activities, or external engagement

Reputational risk*

Definition

Reputational risk is the risk to RBS N.V.'s public image owing to a failure to meet stakeholders' expectations in relation to performance, conduct and business profile. Stakeholders include customers, investors, employees, suppliers, government, regulators, special interest and consumer groups, media and the general public.

Sources of risk

Reputational risk can arise from the conduct of either RBS N.V. as a whole or that of the individuals it employs; from the activities of customers and the countries in which they operate; from the products RBS N.V. offers and the transactions it supports; and from its operations and infrastructure.

Governance

Managing reputational risk is taken very seriously, with RBS Group Board-level oversight reinforced by a Reputational Risk Policy, and by governance frameworks across business franchises.

The RBS Group Board and the Executive Committee have the ultimate responsibility for managing RBS Group's reputation although all staff have some responsibility. The RBS Group Board has set RBS Group's Purpose, Vision and Values, which outline the objective, which is "to be trusted, respected and valued by our customers, shareholders and communities". Refer to the Risk governance section on page 24.

The Sustainable Banking Committee is responsible for overseeing and challenging how management is addressing sustainable banking and reputation issues including risk appetite for environmental, social and ethical (ESE) issues.

The RBS Group Board's oversight of reputational issues is supported by the senior RBS Group-wide Reputational Risk Forum (RRF) which opines on cases that represent a material reputational risk to the whole organisation. The RRF, which has delegated authority from the Executive Risk Forum, also acts as a central forum to review thematic issues and risk appetite positions. Business franchises also have in place reputational risk approval fora to deliberate on customers, transactions, products or issues that may present a reputational risk for their businesses. An example is the Global Reputational Risk Committee in CIB.

Risk appetite

The Reputational and ESE Risk management team assists business franchises, as well as other control functions, to articulate risk appetite to manage reputational risk. Risk appetite positions for certain issues or markets, for example tax or money remitters, are developed through conducting research on legislation, regulation and potential reputational risk factors, undertaking peer analysis and engaging with internal and external stakeholders to discuss the issues. The risk appetite positions classify risks associated with a particular area into Normal, Sensitive and Prohibited. Customers or transactions designated Sensitive require enhanced due diligence and escalation to a reputational risk forum or individual while those rated Normal can be approved by the business without additional escalation. The team also helps set risk appetite to manage reputational risk related to business engagements and customer relationships in some sensitive industry sectors, such as mining and defence, through the ESE policy framework.

A Reputational Risk Policy has also been developed to help employees, businesses and functions effectively identify, assess and manage issues that potentially represent a reputational risk. In addition, other policies, such as those related to conduct, address key sources of reputational risk. These policies are implemented in accordance with the Policy Framework through business and functional policy standard owners. The effectiveness of these policies within each franchise is reported on through the Control Environment Certification process (Refer to the Operational risk section on page 34). Reputational aspects also form a core part of the RBS Group conduct risk framework, with a series of enhanced policies developed in line with conduct risk appetite.

Risk monitoring and measurement

Emerging reputational issues are identified by the business and relevant teams, including RBS Group Sustainability and Enterprise Wide Risk, which assess new and emerging business, sector and country risks for RBS Group. The Risk Management Monthly Report, provided to the Executive Committee and BRC, may also discuss reputational risks facing RBS Group, and the annual Sustainability Report covers progress on sustainability principles.

ESE ratings of customers and transactions are captured and analysed centrally by the Reputational and ESE Risk Team.

Risk mitigation

Reputational risk is mitigated through governance frameworks and training of staff to ensure early identification, assessment and escalation of customers, transactions or products with potential reputational risk, if appropriate. This includes creating appropriate fora, for example reputational risk committees or individual reputational risk approvers.

Also important is the setting of clear reputational risk appetite criteria, ensuring higher risk cases are escalated for senior level approval. Effective communication channels and incident response planning also ensure that cases that result in reputational impact are appropriately managed, for example by declining or exiting business or by ensuring incident management plans are implemented to manage the impact of negative media coverage.

Capital management*

Definition

RBS Group aims to maintain an appropriate level of capital to meet its business needs and regulatory requirements, and operates within an agreed risk appetite. The appropriate level of capital is determined based on the dual aims of: (i) meeting minimum regulatory capital requirements; and (ii) ensuring RBS Group maintains sufficient capital to uphold customer, investor and rating agency confidence in the organisation, thereby supporting its business franchises and funding capacity.

2014 overview

RBS N.V.'s Tier 1 ratio of 24.5% is higher than the end of 2013 primarily reflecting disposals of liquidity portfolio and the transfer of the Thailand entity to RBS plc. There were also further reductions in the RCR portfolio. In the second half of 2014 RBS Group paid down their Tier 2 capital to RBS N.V. of €2.5 billion and there was a dividend upstream of €300 million from RBS N.V. via RBSH Group. The Tier 2 capital was treated as a full capital deduction under the Capital Requirements Directive IV (CRD IV) rules.

Regulatory developments

Capital requirements regulation and directive

The European Union has implemented the Basel III proposals and a number of important changes to the banking regulatory framework through the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD) collectively known as the CRD IV package. The CRD IV package was implemented on 1 January 2014 with full implementation to be completed on 1 January 2019. As part of the implementation of the CRD IV package, the European Banking Authority's technical standards, which are legal acts specifying particular aspects of the CRD IV package, are either in progress to be finalised through adoption by the European Commission or now adopted.

The CRD IV package continues to require a total amount of capital equal to at least 8% of risk-weighted assets but the share that has to be of the highest quality, that is Common Equity Tier 1 capital, increased from 2% to 4.5%. The CRD IV package also introduces more stringent criteria for capital instruments, harmonised adjustments made to capital recognised for regulatory purposes and establishes new capital buffers to be phased in from 1 January 2014. Once fully implemented on 1 January 2019 the following minimum requirements must be met:

- Pillar 1 requirement of: CET1 of 4.5% of RWAs; Tier 1 of 6%; and total capital of 8%.
- Capital buffers: 'capital conservation buffer' of 2.5% of RWAs; 'countercyclical capital buffer' of up to 2.5%; 'Global-Systemically Important Bank (G-SIB)' surcharge of 1.5%; an 'other systemically important institutions buffer' for domestically or EU important institutions and if required by a member state an additional 'systemic risk buffer'.
- Minimum Tier 1 leverage ratio of 3%.

*unaudited

RBS N.V. is managing the changes to capital requirements from new regulation (including model changes) and the resulting impact on the Common Equity Tier 1 ratio alongside its strategy of risk reduction and deleveraging. This is principally being achieved through the transfers/sales of countries and businesses to RBS plc and other interested parties, the continued run-off and disposal of RCR assets and deleveraging in CIB businesses.

The overall impacts of the regulatory changes are fully factored into the capital plans of RBS N.V. and its businesses.

Banking Union: Single Supervisory Mechanism

On 15 October 2013, the EU Council formally adopted the Regulation on the Single Supervisory Mechanism (SSM) which became operational on 4 November 2014. The SSM is a new framework for banking supervision in Europe with the aims of ensuring the safety and soundness of the European banking system and increasing financial integration and stability in Europe.

The European Central Bank has to ensure that credit institutions not only meet the minimum prudential capital requirements set by the CRR/CRD IV but also have an additional buffer reflecting their individual intrinsic risk profile. This is organised through the SSM. The SSM has to ensure that credit institutions have sufficient capital to cover unexpected losses or survive severe stressed economic and market conditions. The joint capital decision is the key outcome of the Supervisory Review and Evaluation Process. In this process, the supervisor reviews the governance and internal control arrangements used by each individual bank to manage its risks (i.e. the Internal Capital Adequacy Assessment Process).

Overall this framework governs relations between the European Central Bank (ECB), national supervisors and banks and is an important step towards banking union in the EU.

Starting late in 2013 and prior to the adoption of the SSM on 4 November 2014 a comprehensive assessment of significant banks in the euro area (including RBS N.V.) was conducted by the ECB. RBS N.V. successfully passed the comprehensive assessment which was a rigorous "financial health check" that included a comprehensive risk assessment, a detailed asset quality review and a stress test. The results of the comprehensive assessment were made public by the ECB in October 2014.

Governance and approach

RBS N.V. Asset and Liability Management Committee (ALCo) is responsible for ensuring RBS N.V. maintains adequate capital at all times. The ALCo manages and plans RBS N.V. capital levels taking into account current and projected capital levels and provides input to and oversees capital levels agreed in the annual Internal Capital Adequacy Assessment Process (ICAAP).

ALCo also plans and manages capital interaction with RBS Group. Such interaction would include, amongst other matters, ALCo considerations around RBS N.V.'s strategic asset sales/transfers to RBS Group which would need to be capital neutral to RBS Group and are required to be structured in such way so as to satisfy DNB, ECB and PRA regulatory requirements. The ALCo is in turn ultimately governed by RBS N.V.'s Managing Board who approve both ALCo and ICAAP capital management decisions.

Capital management* continued

Determining appropriate capital

RBS N.V. aims to maintain an appropriate level of capital to meet its business needs (which include requirements of its parent company RBS Group) and its regulatory requirements and to operate within an agreed risk appetite. Determination of appropriate capital levels involves regular ALCo capital monitoring and planning, budgeting cycle forecasts, and an annual ICAAP. Capital plans are subjected to governance reviews, RBS N.V.'s Managing Board oversight and approval and the review by the appropriate supervisory authority.

Through the annual ICAAP process, RBS N.V. makes a determination of its desired capital levels based on maintaining a target external credit rating and risk appetite within both current and emerging regulatory requirements. Desired capital levels are evaluated through the application of both internally and externally defined stress tests that quantify changes in capital ratios under a range of scenarios. The stress tests are also used to identify management and recovery actions that RBS N.V. would expect to implement should such eventualities arise. These stress assessments are a key part of capital management and contingency planning and therefore complement agreed capital buffers.

Monitoring and maintenance

RBS N.V. operates a rigorous capital planning process via ALCo aimed at ensuring the capital position is controlled within the agreed parameters. This incorporates regular re-forecasts of the capital position of RBS N.V.. In the event that the projected position deteriorates beyond acceptable levels, RBS N.V. would revise business plans accordingly. RBS N.V. is managing the changes to capital requirements from new regulation and model changes and the resulting impact on the Common Equity Tier 1 ratio, focusing on risk reduction and deleveraging. This is principally being achieved through the transfers to RBS plc, the continued run-off and disposal of RCR assets and deleveraging in CIB as the business focuses on the most productive returns on capital.

The overall impacts of the regulatory changes are fully factored into the capital plans of RBS N.V. and its businesses.

Capital allocation

Capital resources are allocated to RBS N.V.'s businesses based on both key performance parameters agreed by the RBS Group Board in an annual strategic planning process and the requirements of strategic asset transfer programmes and capital allocation requirements determined in consultation with RBS Group.

RBS N.V. has regard to the supervisory requirements of De Nederlandsche Bank (DNB) and the ECB under the SSM. The DNB/ECB uses the capital ratio as a measure of capital adequacy in the Netherlands and Eurozone banking sector, comparing a bank's capital resources with its RWAs (the assets and off-balance sheet exposures are weighted to reflect the inherent credit and other risks).

Capital ratios and risk-weighted assets

RBS N.V. aims to maintain an appropriate level of capital to meet its business needs and regulatory requirements. RBS N.V.'s capital ratios and RWAs are set out below.

Capital ratios

	CRR transitional basis 2014	Basel 2.5 basis 2013	2012
	%	%	%
Core Tier 1	16.2	20.5	11.7
Tier 1	24.5	23.2	13.9
Total	33.9	26.1	19.8

Risk-weighted assets

	€m	€m	€m
Credit risk	18,179	15,094	26,336
Market risk	1,182	1,171	3,389
Operational risk	732	1,088	2,994
Settlement risk	28	32	20
	20,121	17,385	32,739

With effect from 1 January 2014 RBS N.V. is regulated under the CRD IV package of Basel 3. The increase in RWAs in 2014 largely reflects the proportional consolidation of Saudi Hollandi Bank, which was previously treated as a capital deduction.

RBS N.V. has used the basic indicator approach since 2013 to calculate the operational risk capital charge.

Liquidity and funding risk	
42	Definition
42	Liquidity risk
42	Funding risk

Liquidity and funding risk

Definition

Liquidity and funding risk is the risk that RBS N.V. is unable to meet its financial obligations, including financing wholesale maturities or customer deposit withdrawals, as and when they fall due.

The risk arises through the maturity transformation role that banks perform. It is dependent on company specific factors such as maturity profile, composition of sources and uses of funding, the quality and size of the liquidity portfolio as well as broader market factors, such as wholesale market conditions alongside depositor and investor behaviour.

As one of the primary operating entities of the RBS Group, RBS N.V.'s liquidity risk is monitored and managed centrally by the RBS Group in line with the policies and processes set by the RBS N.V.'s Managing Board.

Liquidity risk

Policy, framework and governance

Internal liquidity policies are designed to ensure that RBS N.V.:

- *Has a clearly stated liquidity risk tolerance:* appetite for liquidity risk is set by the Board as a percentage of the Individual Liquidity Adequacy Assessment (ILAA) stressed outflows, and is managed on a daily basis by legal entity, country, region and business. In setting risk limits the Board takes into account the nature of RBS N.V. various activities, the overall risk appetite, market best practice and regulatory compliance.
- *Has in place strategies, policies and practices to ensure that RBS N.V. maintains sufficient liquidity:* the risk management framework determines the sources of liquidity risk and the steps that can be taken when these risks exceed certain actively monitored limits. These actions include when and how to use the liquid asset portfolio, and what other adjustments to the balance sheet should be undertaken to manage these risks within the bank's risk appetite. RBS N.V. maintains an adequate liquid asset portfolio appropriate to the business activities of RBS N.V. and its risk profile.
- *Incorporates liquidity costs, benefits and risks in product pricing and performance management:* RBS N.V. uses internal funds transfer pricing to ensure that these costs are reflected in the measurement of business performance and to correctly incentivise businesses to source the most appropriate mix of funding.

The Asset and Liability Management Committee (ALCo) sets and reviews the liquidity risk management framework and limits within the risk appetite set by the Managing Board. ALCo oversees the implementation of liquidity management across RBS N.V..

In setting risk limits RBS N.V. Board takes into account the nature of RBS N.V.'s various activities, RBS N.V.'s overall risk appetite and regulatory compliance.

Regulatory oversight*

With effect from November 2014, RBS N.V. is subject to the European Central Bank's (ECB), supervisory regime for liquidity and each member of RBS N.V. also complies with their local regulatory framework for the assessment and management of liquidity risk as well as meeting internal standards.

Measurement and monitoring

In implementing RBS N.V.'s liquidity risk management framework, a suite of tools are used to monitor, limit and stress test the risks within the balance sheet. The limits control the amount and composition of funding sources, asset and liability mismatches and funding concentrations, in addition to the level of liquidity risk.

Monitoring, reporting and internal limits are under regular review, given the need to appropriately represent and control the business through its considerable changes over time.

RBS N.V. maintains a Contingency Funding Plan (CFP), which forms the basis of analysis and management actions to be undertaken in a liquidity stress. The CFP is linked to stress test results and forms the foundation for liquidity risk limits. The CFP sets out the circumstances under which the plan would be invoked; this includes material worsening of early warning indicators. It also prescribes a communications plan, roles and responsibilities, as well as potential management actions to take in response to various levels of liquidity stress. RBS N.V.'s CFP is fully integrated with the CFP of RBS Group.

Liquidity reserves

RBS N.V.'s liquidity portfolio is managed centrally by RBS Group's Treasury. In addition, local liquidity reserves are the responsibility of local Treasurers who report to the RBS N.V. Treasurer functionally.

Within the liquidity portfolio RBS N.V. holds cash at central banks (€0.8 billion) and high quality government securities (€1.8 billion).

During 2014 RBS N.V. undertook an exercise to sell c.€9bn of less-liquid legacy securities to de-risk the balance sheet and take advantage of favourable market conditions.

Funding risk

Funding markets

As part of the reduction in RBS N.V.'s balance sheet, funding is now concentrated with RBS Group, who given their active role in the money markets, and access to a broad funding base, provide funding to ensure RBS N.V.'s funding is sufficiently diversified.

RBS N.V. accesses the wholesale funding markets directly or through its main operating subsidiaries via established funding programmes. The use of different entities to access the market from time to time allows RBS N.V. to further diversify its funding mix and in certain limited circumstances demonstrate to regulators that specific operating subsidiaries have market access in their own right.

48	Wholesale credit risk management

Credit risk

Risk management is conducted on an overall basis within RBS Group. Therefore the discussion on pages 44 to 51 refer principally to policies and procedures in RBS Group that also apply to RBS N.V..

Definition

Credit risk is the risk of financial loss due to the failure of a customer or counterparty to meet its obligation to settle outstanding amounts.

Sources of credit risk

RBS N.V. is exposed to credit risk through wholesale lending, derivatives and through off-balance-sheet products such as trade finance and guarantees. RBS N.V. is also exposed to credit risk as a result of debt securities held for liquidity management purposes.

Risk governance

The potential for loss is mitigated through a robust credit risk culture and a focus on sustainable lending practices.

Operating model

The RBS Group credit risk management function, which is led by the Group Chief Credit Officer (GCCO), acts as the ultimate authority for the approval of credit and is responsible for ensuring that credit risk is within the risk appetite set by the RBS Group Board. The function is also responsible for managing concentration risk and credit risk control frameworks as well as developing and ensuring compliance with credit risk policies. In addition, the function conducts RBS Group-wide assessments of provision adequacy.

Credit risk within RBS N.V. is managed by the RBS Group credit risk function through an RBS N.V. credit risk delegate who reports to the GCCO and has a functional line to the RBS N.V. CRO. RBS N.V. credit risk management activities include credit risk appetite setting, transaction and portfolio analysis, and ongoing credit risk monitoring and oversight.

The Executive Risk Forum (ERF) has delegated approval authority to the Credit Risk Committee (CRC) to act on credit risk matters. These include, but are not limited to, credit risk appetite and limits (within the overall risk appetite set by the RBS Group Board and the ERF), credit risk strategy and frameworks, credit risk policy and the oversight of the credit profile across RBS Group. There are separate CRCs for the wholesale and personal portfolios. These are chaired by the GCCO or delegate.

The ERF has delegated approval authority to the RBS Group Provisions Committee to manage provisions adequacy, both individual and collective. The RBS Group Provisions Committee, which is chaired by either the Chief Risk Officer or the GCCO, approves recommendations from lower-level provisions committees, which in turn have delegated approval thresholds for certain provision adequacy decisions.

Key trends in the credit risk profile of RBS N.V., performance against limits and emerging risks are set out in the Risk Report provided to the RBS N.V. Risk Controls Committee (RCC) and the Supervisory Board.

The Risk Infrastructure function provides a variety of services that enable the credit risk management function to operate. These include reporting of credit risk data, risk assurance, provision of credit risk models, systems strategy and change management.

Controls and assurance

The RBS Group credit control and assurance framework has three key components: credit policy, policy compliance assessment and independent assurance. These apply to both wholesale and personal credit risk at both portfolio and individual customer level.

The first component is the RBS Group Credit Policy Standard, which is part of the RBS Group Policy Framework. It sets out the rules that must be followed to ensure that credit risks are identified and effectively managed through the credit lifecycle.

The second component is a policy compliance assessment activity that credit risk undertakes to provide the GCCO with evidence of the effectiveness of credit risk management controls in place across RBS Group. The results of these reviews support the self-certification that credit risk must complete every six months.

The third component of RBS Group credit assurance framework is the credit quality assurance activity carried out independently by Risk Assurance, which is part of the Risk Infrastructure function. Risk Assurance independently reviews lending activities to identify control breaches, assess portfolio quality and recommend process improvements. These findings are escalated to senior management and plans to address shortcomings are recorded and tracked in RBS Group's operational risk system. Risk Assurance's credit quality assurance activities are overseen by the RBS Group Audit Committee and the results of its reviews are regularly shared with the regulators.

In addition, controls and processes are regularly reviewed by RBS Group's Internal Audit (IA) function. IA provides assurance to the Group Audit Committee and senior executive that the main business risks have been identified and that effective controls are in place to manage these risks.

Risk management*

Risk appetite

Risk appetite across all risk types is set by RBS Group using specific quantitative targets under stress, including earnings volatility and capital adequacy. The credit risk appetite framework has been designed to reflect the factors that influence the ability to meet those targets. These include product and asset class, industry sector, single name and country concentrations. Any of these factors could generate higher earnings volatility under stress and, if not adequately controlled, undermine capital adequacy. Tools such as stress testing and economic capital are used to measure credit risk volatility and develop links between risk appetite targets and the credit risk appetite framework. The frameworks are supported by a suite of policies that set out the risk parameters within which franchises must operate. Impairments, and associated key metrics such as loan loss rates and provision coverage, are an integral part of standard credit risk portfolio reviews and are presented to CRC monthly. These metrics are also fully considered as part of the sector and product class appetite reviews. RBS Group also manages its exposures to counterparty credit risk closely, using portfolio limits and specific tools to control more volatile or capital-intensive business areas.

*unaudited

Risk monitoring and problem debt management

A key aspect of credit risk management relates to problem debt management, from early problem identification through to litigation and recovery of cash when there is no realistic potential for rehabilitation. Various tools and techniques are deployed during this part of the credit cycle including the offering of forbearance. For further information refer to the Wholesale credit risk management sub-section.

Impairments and write-offs

Internal measures of credit risk are stated gross of impairments. However, impairments and write-offs are used as key indicators of credit quality as part of the overall assessment of credit risk incurred by RBS Group. These are estimated as follows:

Impaired definition

A financial asset is impaired if there is objective evidence that an event or events since initial recognition of the asset has adversely affected the amount or timing of future cash flows from it. The loss is measured as the difference between the carrying value of the asset and the present value of estimated future cash flows discounted at the original effective interest rate.

For wholesale exposures, days-past-due measures are typically used to identify evidence of impairment. In corporate portfolios, a period of 90 days past due is used. In sovereign portfolios, the period used is 180 days past due. Other factors are considered including: the borrower's financial condition; a forbearance event; a loan restructuring; the probability of bankruptcy; or any evidence of diminished cash flows.

Provisioning

If there is objective evidence that an impairment loss has been incurred, the amount of the loss is measured as the difference between the asset carrying amount and the present value of the estimated future cash flows discounted at the financial asset's original effective interest rate. The current net realisable value of the collateral will be taken into account in determining the need for a provision. This includes cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable. No impairment provision is recognised in cases where amounts due are expected to be settled in full on realisation of the security. RBS N.V. uses primarily one of the following two different methods to assess the amount of provision required: individual; and latent.

Individually-assessed provisions

Loans and securities above a defined threshold deemed to be individually significant are assessed on a case-by-case basis. Assessments of future cash flows take into account the impact of any guarantees or collateral held. Estimating the amount and timing of future cash flows involves judgement based on the facts available at the time and assumptions related to the future financial performance of the customer or counterparty and any guarantors as well as future economic conditions and the value of collateral. Projected cash flows are reviewed on subsequent assessment dates as new information becomes available.

*unaudited

Latent loss provisions

In the performing portfolio, latent loss provisions are held against losses incurred but not identified before the balance sheet date. Latent loss provisions reflect probability of default (PD) and loss given default (LGD) as well as emergence periods. The emergence period is the period between the occurrence of the impairment event and the identification and reporting of a loan as impaired.

Emergence periods are estimated at a portfolio level and reflect the portfolio product characteristics such as coupon period and repayment terms, and the duration of the administrative process required to report and identify an impaired loan as such. Emergence periods in RBS N.V. vary across different portfolios from 150 days for non-forborne exposures to 365 days for forborne exposures. They are based on actual experience within the particular portfolio and are reviewed regularly.

Latent provisions are computed by applying portfolio-level LGDs, PDs and emergence periods. The wholesale calculation is based on similar principles but there is no segmentation into portfolios. PDs and LGDs are calculated individually.

Available-for-sale portfolios

RBS N.V. reviews its portfolios of available-for-sale financial assets for evidence of impairment, which includes: default or delinquency in interest or principal payments; significant financial difficulty of the issuer or obligor; and increased likelihood that the issuer will enter bankruptcy or other financial reorganisation. However, the disappearance of an active market because an entity's financial instruments are no longer publicly traded is not evidence of impairment. Furthermore, a downgrade of an entity's credit rating is not, in itself, evidence of impairment, although it may be evidence of impairment when considered with other available information. A decline in the fair value of a financial asset below its cost or amortised cost is not necessarily evidence of impairment. Determining whether evidence of impairment exists requires the exercise of management judgement. Unrecognised losses on RBS N.V.'s available-for-sale debt securities are concentrated in its portfolios of asset-backed securities. Such losses reflect the widening of credit spreads as a result of the reduced market liquidity in these securities and the current uncertain macroeconomic outlook in Europe. The underlying securities remain unimpaired. See also the AFS analysis table on page 58.

Sensitivity of impairments to assumptions

Key assumptions relating to impairment levels of secured lending relate to the valuation of the security and collateral held, the timing of asset disposals based on the underlying market depth and liquidity and customer cooperation. Assumptions on timing also include an assessment of the ease and timing of the enforceability of loan agreements in varying legal jurisdictions. Assumptions are made on a case by case basis in the case of individually assessed provisions and are often based on judgement.

Key assumptions relating to impairment levels of unsecured lending relate to economic conditions and the interest rate environment, which have a direct impact on customers' debt servicing capabilities. For individual impairments greater than £1 million, oversight is provided by the RBS Group Provisions Committee.

Credit risk continued

Write-offs

Impaired loans and receivables are written-off, that is, the impairment provision is applied in writing down the loan's carrying value partially or in full, when there is no longer any realistic prospect of recovery of part or all of the loan. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs may be prompted by bankruptcy, insolvency, forbearance and similar events.

Risk measurement*

Risk exposure measurement

RBSH Group uses a range of measures for credit risk exposures. The internal measure used, unless otherwise stated, is credit risk assets (CRA) consisting of:

- Lending exposure - measured using drawn balances and includes cash balances at central banks and loans and advances to banks and customers (including overdraft facilities, instalment credit and finance leases).
- Counterparty exposures - measured using the marked-to-market value of derivatives after the effect of enforceable netting agreements and regulator-approved models but before the effect of collateral. Counterparty exposures include rate risk management, which includes those arising from foreign exchange transactions, interest rate swaps, credit default swaps and options.
- Contingent obligations - measured using the value of the committed amount and including primarily letters of credit and guarantees.

CRA exclude issuer risk (primarily debt securities) and securities financing transactions. CRA take account of regulatory netting although, in practice, obligations are settled under legal netting arrangements that provide a right of legal set-off but do not meet the offset criteria under IFRS.

Risk models

RBS Group uses the output of credit risk models in the credit approval process - as well as for ongoing credit risk assessment, monitoring and reporting - to inform credit risk appetite decisions. These models may be divided into three categories:

Probability of default (PD)

PD models assess the probability of a customer failing its credit obligations over a one-year period.

- **Wholesale models** - A number of credit grading models consider risk characteristics relevant to different customer types. These models use a combination of quantitative inputs, such as recent financial performance, and qualitative inputs such as management performance or sector outlook. As part of the credit assessment process, RBS Group assigns each customer an internal credit grade based on its PD.

Exposure at default (EAD)

EAD models provide estimates of credit facility utilisation at the time of a customer default, recognising that customers may make further drawings on unused credit facilities prior to default or that exposures may increase due to market movements. Regulatory requirements stipulate that EAD must always be equal to, or higher, than current utilisation. Exposure can be reduced by a legally enforceable netting agreement.

Loss given default (LGD)

LGD models estimate the amount that cannot be recovered in the event of customer default. When estimating LGD, RBS Group's models assess both borrower and facility characteristics, as well as any credit risk mitigants. The cost of collections and a time-discount factor for the delay in cash recovery are also incorporated.

Changes to credit models

RBS Group reviews and updates models on an ongoing basis, reflecting the impact of more recent data, changes to products and portfolios, and new regulatory requirements. Extensive changes were made to wholesale models in 2012 and 2013. This continued in 2014 with further changes, notably in the corporate exposure class.

New PD models are being implemented for large corporate customers. The roll-out will be completed by mid-2015. The updated calibrations associated with these new models, which reference over 20 years of rating agency default experience, may result in downwards rating migrations across internal asset quality bands. For further information regarding the impact of this change refer to the Asset quality section on page 54.

Economic capital

The credit economic capital model is a framework that allows for the calculation of portfolio credit loss distributions and associated metrics over a given risk horizon for a variety of business purposes.

The model takes into account migration risk (the risk that credit assets will deteriorate in credit quality across multiple years), factor correlation (the assumption that groups of obligors share a common factor) and contagion risk (for example, the risk that the weakening of the sovereign's credit worthiness has a significant impact on the creditworthiness of a business operating in that country).

Risk mitigation

Risk mitigation techniques are used in the management of credit portfolios across RBS Group, typically to mitigate credit concentrations in relation to an individual customer, a borrower group or a collection of related borrowers. Where possible, customer credit balances are netted against obligations.

Mitigation tools applied can include: structuring a security interest in a physical or financial asset; use of credit derivatives, including credit default swaps, credit-linked debt instruments and securitisation structures; and use of guarantees and similar instruments (for example, credit insurance) from related and third parties.

*unaudited

When seeking to mitigate risk, at a minimum RBS Group considers the following:

- The suitability of the proposed risk mitigation, particularly if restrictions apply;
- The means by which legal certainty is to be established, including required documentation, supportive legal opinions and the steps needed to establish legal rights;
- The acceptability of the methodologies to be used for initial and subsequent valuation of collateral, the frequency of valuations and the advance rates given;
- The actions which can be taken if the value of collateral or other mitigants is less than needed;
- The risk that the value of mitigants and counterparty credit quality may deteriorate simultaneously;
- The need to manage concentration risks arising from collateral types; and
- The need to ensure that any risk mitigation remains legally effective and enforceable.

The RBS Group business and credit teams are supported by specialist in-house documentation teams. RBS Group uses industry-standard loan and security documentation wherever possible. However, when non-standard documentation is used, external lawyers are employed to review it on a case-by-case basis. For further information refer to the Wholesale credit risk management sub-section.

Wholesale credit risk management

Wholesale credit risk management focuses on the credit risks arising from activities with corporate and SME clients as well as banks, other financial institutions and sovereigns.

Risk appetite frameworks*

Four formal frameworks are used to manage wholesale credit concentration risk. RBS Group continually reassesses its frameworks to ensure they remain appropriate for its varied business franchises and current economic conditions as well as to reflect further refinements in RBS Group's risk measurement models.

Through the overlay model, RBS N.V.'s concentration risks are captured in and primarily governed by, the RBS Group's risk control frameworks. However, concentration risks are actively monitored from an RBS N.V. perspective through monthly reporting and appropriate action is taken if necessary.

Single name concentration

A single name concentration (SNC) framework addresses the risk of outsized loss arising from a concentration of credit risk to a single borrower or borrower group. The framework includes elevated approval authority, additional reporting and monitoring, and the requirement for plans to address exposures in excess of appetite.

SNC excesses are reviewed on a gross basis as well as on a net basis after taking mitigation into account. All net excesses are managed through an approved, customer specific, exposure management plan. To reduce its SNC exposures, RBS Group may decide to sell excess amounts or rely on mitigation. To be considered effective under the framework, mitigation must be "eligible". Examples of eligible credit risk mitigants include cash collateral, government or bank guarantees, credit default swaps or trade insurance. Eligible credit risk mitigants must also be structurally effective, legally certain, enforceable and characterised by an appropriate maturity profile.

Sector concentration

Sector concentration risk is the risk of an outsized loss arising from a concentration of credit risk to customers in the same sector or across sectors that are susceptible to similar stress events. The sector concentration framework enables RBS Group to manage this risk and acts as one of the primary mechanisms for cascading the RBS Group Board-approved risk appetite to business franchises. It also details the controls for managing and reporting credit exposure to industry sectors.

The sector concentration framework was revised in 2014. Previously, sectors were classified according to size. Under the revised sector framework, sectors are classified according to their risk (based on EC and various qualitative factors) as well as size. This classification drives the level of oversight and frequency of sector reviews. Reviews may include an assessment of business strategy, credit risk profile, key risks and mitigants, the current and expected future external environment, vulnerability to stress events, regulatory developments and economic capital usage to derive a proposed risk appetite along with transaction acceptance standards.

Product and asset class concentration framework

Product and asset class concentration risk is the risk of an outsized loss arising from a concentration in certain products or asset classes. The product and asset class framework monitors specific credit risk types such as settlement or wrong-way risk and products such as long-dated derivatives or securitisations. These product and asset classes may require specific policies and expertise as well as tailored monitoring and reporting measures. In some cases specific limits and thresholds are deployed to ensure that the credit risk inherent in these lines of business and products is adequately controlled. Exposures are reviewed regularly in accordance with the product and asset class concentration framework. The reviews consider the risks inherent in each product or asset class, the risk controls applied, monitoring and reporting of the risk, the client base, and any emerging risks to ensure risk appetite remains appropriate.

Credit risk *continued*

Country concentration

The country concentration framework is described in the Country risk section on pages 67 to 72.

Risk assessment

The credit risk function assesses, approves and manages the credit risk associated with a borrower or group of related borrowers.

The Group Chief Credit Officer has established a framework of individual delegated authorities, which are set out in the RBS Group Credit Risk Policy. The framework requires at least two individuals to approve each credit decision, one from the business and one from the credit risk function. Both must hold appropriate delegated authority, which is dependent on their experience and expertise. Only a small number of senior executives hold the highest authority provided under the framework. While both parties are accountable for the quality of each decision taken, the credit risk approver holds ultimate sanctioning authority.

Assessments of credit risk must, at a minimum, specifically address the following elements:

- The amount, terms, tenor, structure, conditions, purpose and appropriateness of all credit facilities;
- Compliance with applicable RBS Group-wide and/or franchise-level credit policies;
- The customer's ability to meet obligations, based on an analysis of financial information and a review of payment and covenant compliance history;
- The source of repayment and the customer's risk profile, including its sector and sensitivity to economic and market developments, and any credit risk mitigation;
- Refinancing risk - the risk of loss arising from the failure of a customer to settle an obligation on expiry of a facility through the drawdown of another credit facility provided by RBS N.V. or by another lender;
- Consideration of other risks such as environmental, social and ethical, regulatory and reputational risks; and
- The portfolio impact of the transaction, including the impact on any credit risk concentration limits or agreed business franchise risk appetite.

At a minimum, credit relationships are reviewed and re-approved annually. The renewal process addresses borrower performance, including reconfirmation or adjustment of risk parameter estimates; the adequacy of security; compliance with terms and conditions; and refinancing risk.

Risk mitigation

RBS Group mitigates credit risk through the use of netting, collateral and the use of market standard documentation.

The types of collateral RBS Group takes to mitigate the credit risk arising from wholesale lending varies according to the nature of the counterparty and its assets. The most common types are:

- **Physical assets** - These may include stock, plant, equipment, machinery, vehicles, ships and aircraft. Such assets are suitable collateral only if RBS Group can identify, locate, and segregate them from other assets on which it does not have a claim. RBS Group values physical assets in a variety of different ways, depending on the type of asset concerned and may rely on balance sheet valuations in certain cases.
- **Receivables** - These are amounts owed to RBS Group's counterparties by their own customers. RBS Group values them after taking into account the quality of its counterparty's receivable management processes and excluding any that are past due.

All collateral is assessed case-by-case to ensure that it will retain its value independently of the provider. RBS Group monitors the value of the collateral and, if there is a shortfall, will seek additional collateral.

Problem debt management

Early problem identification

Each segment has defined early warning indicators (EWIs) to identify customers experiencing financial difficulty, and to increase monitoring if needed. EWIs may be internal, such as a customer's bank account activity, or external, such as a publicly-listed customer's share price. If EWIs show a customer is experiencing potential or actual difficulty, credit officers within the business franchise may decide to place the customer on the Watchlist.

*Watchlist**

For customers not managed in RCR, there are three Watch classifications - Amber, Red and Black - reflecting progressively deteriorating conditions. Watch Amber customers are performing customers who show early signs of potential financial difficulty, or have other characteristics that warrant closer monitoring. Watch Red customers are performing customers who show signs of declining creditworthiness and so require active management usually by Restructuring (formerly known as Global Restructuring Group). The Watch Black portfolio includes AQ10 exposures.

Once on the Watchlist, depending on the severity of the financial difficulty and the size of the exposure, the customer relationship strategy is reassessed by credit officers, by specialist credit risk or relationship management units in the relevant business or by Restructuring. In accordance with RBS Group-wide policies, a number of mandatory actions are taken, including a review of the customer's credit grade and facility and security documentation.

*unaudited

In more material cases, a forum of experienced credit, portfolio management and remedial management specialists in either the relevant business or Restructuring may reassess the customer relationship strategy.

Appropriate corrective action is taken when circumstances emerge that may affect the customer's ability to service its debt. Such circumstances include deteriorating trading performance, imminent breach of covenant, challenging macroeconomic conditions, a late payment or the expectation of a missed payment.

For all Watch Red cases, credit specialists in the relevant business are required to consult with their counterparts in Restructuring on whether the relationship should be transferred to Restructuring (for more information on Restructuring, refer to the section below). Watch Red customers that continue to be managed by the business tend to be those requiring subject matter expertise that is available in the business rather than in Restructuring.

Remediation strategies available in the business include granting a customer various types of concessions. Any decision to approve a concession will be a function of specific country and sector appetite, the credit quality of the customer, the market environment and the loan structure and security. For further information, refer to the Forbearance section below.

Other potential outcomes of the relationship review are to: take the customer off the Watchlist; offer additional lending and continue monitoring; transfer the relationship to Restructuring if appropriate; or exit the relationship altogether.

Customers managed in RCR are by their nature subject to heightened scrutiny and regular review against specific disposal plans. RCR customers are separately identified in RBS Group's internal Watchlist reporting, with their Watchlist classification based on asset quality.

Restructuring

Separately to the Credit Risk management function, the Restructuring team manages RBS Group's wholesale problem debt portfolio in cases where its exposure to the customer exceeds £1 million. In addition, Restructuring has a specialist credit function, the Strategy Management Unit, for distressed bilateral lending where the exposure is between £250,000 and £1 million.

The factor common to all customers managed by Restructuring is that RBS Group's exposure is outside risk appetite. The primary function of Restructuring is to restore customers to an acceptable credit profile, minimise losses to RBS Group and protect RBS Group's capital.

Specialists in Restructuring work with customers experiencing financial difficulties, and showing signs of financial stress, with the aim of restoring their business to financial health whenever possible. The objective is to find a mutually acceptable solution, including repayment, refinancing or transfer to another bank if that is the customer's preferred option.

The specialists conduct a detailed assessment of the viability of the business, as well as the ability of management to deal with the causes of financial difficulty, focusing on both financial and operational issues.

Following the assessment, various options are discussed with the customer (which may involve debt restructuring or forbearance or both) and bespoke solutions are developed.

If the customer's finances are not viable and a mutually agreed exit is not possible, insolvency may be considered as a last resort. However, helping the customer return to financial health and restoring a normal banking relationship is always the desired goal.

Forbearance

Definition

Forbearance takes place when a concession is made on the contractual terms of a loan in response to a customer's financial difficulties.

Concessions granted where there is no evidence of financial difficulty, or where any changes to terms and conditions are within usual risk appetite (for a new customer), or reflect improving credit market conditions for the customer, are not considered forbearance.

A number of options are available. These are tailored to the customer's individual circumstances. The aim is to restore the customer to financial health and to minimise risk to RBS Group. To ensure that forbearance is appropriate for the needs and financial profile of the customer, RBS Group applies minimum standards when assessing, recording, monitoring and reporting forbearance.

At 31 December 2014, loans totalling €57 million (2013 - €44 million) were subject to forbearance procedures but had not reached legal completion, the forbearance completed in 2014 was €7 million (2013 - nil).

Types of wholesale forbearance

Wholesale forbearance may involve the following types of concessions:

Payment concessions and loan rescheduling, including extensions in contractual maturity, may be granted to improve the customer's liquidity. Concessions may also be granted on the expectation that the customer's liquidity will recover when market conditions improve. In addition, they may be granted if the customer will benefit from access to alternative sources of liquidity, such as an issue of equity capital. These options have been used in CRE transactions, particularly during periods where a shortage of market liquidity has ruled out immediate refinancing and made short-term collateral sales unattractive.

Debt may be forgiven, or exchanged for equity, where the customer's business condition or economic environment is such that it cannot meet obligations and where other forms of forbearance are unlikely to succeed. Debt forgiveness can be used for stressed corporate transactions and are typically structured on the basis of projected cash flows from operational activities, rather than underlying tangible asset values. Provided that the underlying business model, strategy and debt level are viable, maintaining the business as a going concern is the preferred option, rather than realising the value of the underlying assets.

*unaudited

Credit risk continued

The contractual margin may be amended to bolster the customer's day-to-day liquidity to help sustain its business as a going concern. This would normally be a short-term solution. As set out above, RBS Group would seek to obtain a return commensurate to the risk that it is required to take and this can be structured as set out above.

A temporary covenant waiver, a recalibration of covenants or a covenant amendment may be used to cure a potential or actual covenant breach. In return for this relief, RBS Group would seek to obtain a return commensurate with the risk that it is required to take. The increased return for the increased risk can be structured flexibly to take into account the customer's circumstances. For example it may be structured as either increased margin on a cash or payment in kind basis, deferred return instruments or both. While RBS Group considers these types of concessions qualitatively different from other forms of forbearance, they constitute a significant proportion of wholesale forborne loans and are therefore included in these forbearance disclosures.

Loans may be forborne more than once, generally where a temporary concession has been granted and circumstances warrant another temporary or permanent revision of the loan's terms. All customers are assigned a PD and related facilities a LGD. These are re-assessed prior to finalising any forbearance arrangement in light of the loan's amended terms and any revised grading is incorporated in the calculation of the impairment loss provisions for RBS Group's wholesale exposures. Where forbearance is no longer viable, RBS Group will consider other options such as the enforcement of security, insolvency proceedings or both.

The ultimate outcome of a forbearance strategy is unknown at the time of execution. It is highly dependent on the cooperation of the borrower and the continued existence of a viable business. The following are generally considered to be options of last resort:

- Enforcement of security or otherwise taking control of assets - Where RBS Group holds collateral or other security interest and is entitled to enforce its rights, it may enforce its security or otherwise take control of the assets. The preferred strategy is to consider other possible options prior to exercising these rights.
- Insolvency - Where there is no suitable forbearance option or the business is no longer sustainable, insolvency will be considered. Insolvency may be the only option that ensures that the assets of the business are properly and efficiently distributed to relevant creditors.

Impairments for forbearance

Wholesale loans granted forbearance are individually assessed in most cases and are not therefore segregated into a separate risk pool.

Retail and leisure	—	8	99
Services	—	1	4
Other	—	198	122
Total	179	322	441

*unaudited

Forbearance may result in the value of the outstanding debt exceeding the present value of the estimated future cash flows. This may result in the recognition of an impairment loss or a write-off.

Provisions for forborne wholesale loans are assessed in accordance with normal provisioning policies. The customer's financial position and prospects as well as the likely effect of the forbearance, including any concessions granted, are considered in order to establish whether an impairment provision is required.

All wholesale customers are assigned a PD and related facilities a LGD. These are re-assessed prior to finalising any forbearance arrangement in light of the loan's amended terms and any revised grading incorporated in the calculation of the impairment loss provisions for RBS Group's wholesale exposures.

For performing loans, credit metrics are an integral part of the latent provision methodology and therefore the impact of covenant concessions will be reflected in the latent provision. For non-performing loans, covenant concessions will be considered in determining the overall provision for these loans.

In the case of non-performing forborne loans, the loan impairment provision assessment almost invariably takes place prior to forbearance being granted. The amount of the loan impairment provision may change once the terms of the forbearance are known, resulting in an additional provision charge or a release of the provision in the period the forbearance is granted.

The transfer of wholesale loans subject to forbearance from impaired to performing status follows assessment by relationship managers and the Credit Risk function in Restructuring. When no further losses are anticipated and the customer is expected to meet the loan's revised terms, any provision is written-off and the balance of the loan returned to performing status. This course of action is not dependent on a specified time period and follows the credit risk manager's assessment that it is appropriate.

Impairments

Impairments in the wholesale portfolio decreased compared with 2013. This reflected a better economic environment as well as an ongoing decrease of the RBS N.V. credit portfolio following further transfers of assets to RBS Group.

Watchlist*

The following table shows a sector breakdown of credit risk assets of Watchlist Red counterparties managed by Restructuring. At 31 December 2014, exposures to customers reported as Watchlist Red and managed by the business totalled €10.0 million (2013 - €10.2 million; 2012 - € 10.6 million).

Asset quality

The asset quality analysis presented below is based on RBS N.V.'s internal asset quality ratings which have ranges for the probability of default, as set out below. Customers are assigned credit grades, based on various credit grading models that reflect the key drivers of default for the customer type. All credit grades map to both an asset quality scale, used for external financial reporting, and a master grading scale for wholesale exposures used for internal management reporting across portfolios. Debt securities are analysed by external ratings agencies and are therefore excluded from the following table and are set out on page 56.

The following table details, for illustrative purposes only, the relationship between internal asset quality (AQ) bands and external ratings published by S&P, for illustrative purposes only. This relationship is established by observing S&P's default study statistics, notably the one year default rates for each S&P rating grade. A degree of judgement is required to relate the probability of default (PD) ranges associated with the master grading scale to these default rates given that, for example, the S&P published default rates do not increase uniformly by grade and the historical default rate is nil for the highest rating categories.

Asset quality band	Probability of default range	Indicative S&P rating
AQ1	0% - 0.034%	AAA to AA
AQ2	0.034% - 0.048%	AA-
AQ3	0.048% - 0.095%	A+ to A
AQ4	0.095% - 0.381%	A- to BBB-
AQ5	0.381% - 1.076%	BB+ to BB
AQ6	1.076% - 2.153%	BB- to B+
AQ7	2.153% - 6.089%	B+ to B
AQ8	6.089% - 17.222%	B- to CCC+
AQ9	17.222% - 100%	CCC to C
AQ10	100%	D

The mapping to the S&P ratings is used by RBS N.V. as one of several benchmarks for its wholesale portfolios, depending on customer type and the purpose of the benchmark. The mapping is based on all issuer types rated by S&P. It should therefore be considered illustrative and does not, for instance, indicate that exposures reported against S&P ratings either have been or would be assigned those ratings if assessed by S&P. In addition, the relationship is not relevant for retail portfolios, smaller corporate exposures or specialist corporate segments given that S&P does not typically assign ratings to such issuers.

Market risk

Definition

Market risk is the risk of losses arising from fluctuations in interest rates, credit spreads, foreign currency rates, equity prices, commodity prices and other factors, such as market volatilities, that may lead to a reduction in earnings, economic value or both.

Sources of risk

RBS N.V. is exposed to traded market risk through its trading activities and to non-traded market risk as a result of its banking activities. In many respects, it manages its traded and non-traded market risk exposures separately, as described in this section, largely in line with the regulatory definitions of the trading and non-trading books.

Traded market risk

The majority of RBS N.V.'s traded market risk exposure arises in CIB and RCR.

The primary objective of RBS N.V.'s trading activities is to provide a range of financing, risk management and investment services to its customers, including major corporations and financial institutions around the world. From a market risk perspective, RBS N.V.'s trading activities are included within the following markets: currencies; emerging markets; rates; asset-backed products; and traded credit.

RBS N.V. undertakes transactions in financial instruments including debt securities, loans, deposits and equities, as well as securities financing and derivative transactions.

Some of these transactions involve trading or clearing financial instruments on an exchange, including interest rate swaps, futures and options. Holders of these instruments provide margin on a daily basis with cash or other security at the exchange.

Other products are not transacted on an exchange. Of these over-the-counter transactions, those with standard terms are cleared through central counterparties, while those that are more complex are settled directly with the counterparty and may give rise to counterparty credit risk, which RBS N.V. manages actively.

Non-traded market risk

The majority of RBS N.V.'s non-traded market risk exposure arises from assets and liabilities that are not classified as held for trading.

The management of non-traded market risk is largely organised in line with the following two key categories: non-traded interest rate risk (NTIRR) and non-traded foreign exchange risk. RBS N.V. has no material exposure to non-traded equity risk.

Interest rate risk

NTIRR arises from the provision to customers of a range of banking products that have differing interest rate characteristics. Therefore, when aggregated, these products form portfolios of assets and liabilities with varying degrees of sensitivity to changes in market interest rates. Mismatches in these sensitivities can give rise to volatility in net interest income as interest rates rise and fall.

Foreign exchange risk

Non-traded foreign exchange risk exposures for RBS N.V. arise from two main sources:

- *Structural foreign exchange risk* - arising from the capital deployed in foreign subsidiaries, branches and associates and related currency funding where it differs from the euro; and
- *Transactional foreign exchange risk* - arising from customer transactions and profits and losses that are in a currency other than the functional currency of the transacting operation.

Equity risk

RBS N.V. has no material exposure to non-traded equity risk.

Risk governance

RBS Group's Market Risk function is responsible for identifying, measuring, monitoring and controlling the market risk arising from both trading and non-trading activities.

For general information on risk governance, refer to the Risk governance section on page 24.

More specific information on the governance, management and measurement of traded and non-traded market risk is provided in each of the dedicated sections below.

Traded market risk

Controls and assurance

RBS Group's market risk control and assurance framework has three key components: market risk policy; assurance approach policy; and independent assurance.

The Group Market Risk Policy Standard is part of the Group Policy Framework. It sets out the rules that RBS Group's businesses must follow to ensure that market risks are identified, measured and effectively managed.

The assurance approach policy comprises various elements, including the Risk and Control Assurance Framework process. This process ensures that, on an ongoing basis, specifically designed controls are in place for the risks that RBS Group faces to ensure that its exposure does not exceed its appetite. The adequacy and effectiveness of these controls are tested according to their rating, at least annually. The results of this testing are shared regularly at the Market Risk Governance and Control Committee.

Market Risk Assurance forms part of Risk Assurance. This independent second line of defence function provides assurance on the robustness of the market risk framework within RBS Group, via centralised analysis of the control framework, complemented by the application of expert judgement through qualitative reviews. These findings are escalated to senior management and plans to address any shortcomings are recorded and tracked in the operational risk system. Market Risk Assurance activities are also reported directly and independently to the Group Audit Committee.

For information on valuation controls, independent price verification and model validation, refer to page 64.

Traded market risk continued

Risk appetite*

Market risk appetite is the level of market risk that RBS N.V. accepts when pursuing its business objectives, taking into account stressed scenarios. RBS N.V. has a comprehensive structure and controls in place aimed at ensuring that this appetite is not exceeded. RBS N.V.'s risk appetite is aligned with that of RBS Group.

RBS Group's qualitative market risk appetite is set out in policy statements. These define the governance, responsibilities, control framework and requirements for the identification, measurement, analysis, management and reporting of market risk arising from trading and non-trading activities. These policies are also cascaded, as appropriate, to the legal entities, franchises and businesses to ensure there is a consistent control framework throughout.

The quantitative market risk appetite is expressed in terms of limits for the trading and non-trading activities. These limits, which establish a set of comprehensive boundaries within which business activities are conducted and monitored based on business plans, are proposed by the Director of Market Risk.

Once RBS Group-level limits are approved by the Executive Risk Forum (ERF), the Director of Market Risk may cascade the limits further down the organisation as required. For each trading business, a document known as a dealing authority compiles details of all applicable limits and trading restrictions.

The limit framework at RBS Group level comprises value-at-risk (VaR), stressed value-at-risk (SVaR) and sensitivity and stress limits (for more details on VaR and SVaR, refer to pages 61 and 62). The limit framework at the lower levels also comprises additional metrics that are specific to the market risk exposures within its scope. These additional metrics aim to control various risk dimensions such as product type, exposure size, aged inventory, currency and tenor.

The limits are reviewed to reflect changes in risk appetite, business plans, portfolio composition and the market and economic environments.

Limit breaches at RBS Group level require escalation by the Director of Market Risk, as appropriate, to the ERF. Limit breaches at the lower levels require escalation by the head of the relevant market risk segment to the Director of Market Risk, as appropriate.

Risk assessment

Identification and assessment of traded market risk is achieved through gathering, analysing, monitoring and reporting market risk information by business line or at a consolidated level. Industry expertise, continued system developments and techniques such as stress testing are also used to enhance the effectiveness of the identification of all material market risks.

This is complemented by the New Product Risk Assessment process, which requires market risk teams to assess and quantify market risk associated with all proposed new products.

*unaudited

Risk monitoring

RBS N.V.'s traded market risk exposures are monitored against limits and analysed daily by market risk reporting and control functions. A daily report that summarises RBS N.V.'s market risk exposures against the limits is sent to the RBS N.V. Head of Market Risk.

The market risk functions also prepare daily risk reports that detail exposures against a more granular set of limits and triggers.

Finally, a market risk update is included in the monthly risk management report sent to the RBS N.V. Risk and Control Committee (RCC).

Risk control

To ensure approved limits are not breached and that RBS Group remains within its risk appetite, triggers at RBS Group and lower levels have been set such that if exposures exceed a specified level, action plans are developed by the front office, Market Risk and Finance.

Counterparty Exposure Management

Management of the RBS Group's over-the-counter derivative counterparty credit risk and funding risk is carried out by the Counterparty Exposure Management (CEM) desk in CIB. CEM actively manages risk exposures and concentrations on behalf of both CIB and RCR. The hedging transactions CEM enters into are booked in the trading book and therefore contribute to the RBS Group's market risk VaR exposure and capital.

Risk measurement

Value-at-Risk

VaR is a statistical estimate of the potential change in the market value of a portfolio (and, thus, the impact on the income statement) over a specified time horizon at a given confidence level. For internal risk management purposes, RBS Group's VaR assumes a time horizon of one trading day and a confidence level of 99%. RBS Group's VaR model is based on a historical simulation, utilising data from the previous 500 days on an equally weighted basis.

At RBS N.V. level, a different VaR model is employed. It remains based on a historical simulation model and assumes a time horizon of one trading day and a confidence level of 99%. However, it uses 401 observations of historical market data exponentially weighted with a weighted average history of six months.

VaR limitations*

Historical simulation VaR and RBS N.V.'s implementation have a number of known limitations, as summarised below, and RBS N.V.'s VaR should be interpreted in light of these.

- Historical simulation VaR may not provide the best estimate of future market movements. It can only provide a forecast of portfolio losses based on events that occurred in the past. The RBS N.V. model uses the previous 401 days of data; this period represents a balance between model responsiveness to recent shocks and risk factor data coverage.
- The use of a 99% confidence level VaR statistic does not provide information about losses beyond this level, usually referred to as 'tail' risks. These risks are more appropriately assessed using measures such as Stressed VaR and stress testing.

- The use of a one-day time horizon will not fully capture the profit and loss implications of positions that cannot be liquidated or hedged within one day. This may not fully reflect market risk at times of severe illiquidity in the market when a one-day period may be insufficient to liquidate or hedge positions fully. Thus, the regulatory VaR that is used for modelled market risk capital uses a ten-day time horizon.
- RBS N.V. computes the VaR of trading positions at the close of business. Positions may change substantially during the course of the trading day and so intra-day price volatility and trading may not be captured by the model.
- Risk factors relevant to a specific portfolio may be omitted, due to a lack of reliable data, or the use of proxy risk factors, for example. RBS N.V. has developed the Risks not in VaR (RNIV) framework to address these issues.
- RBS N.V.'s approach is to supplement VaR with other metrics that addresses the above limitations to ensure appropriate coverage of all material risks.

VaR validation*

A dedicated model-testing team within RBS Group Market Risk works with the risk managers to:

- Test the accuracy of the valuation methods used in the VaR model on appropriately chosen test portfolios and trades.
- Apply in-house models to perform advanced internal back-testing to complement the regulatory back-testing.
- Identify risks not adequately captured in VaR, and ensure that such risks are addressed via the RNIV framework.
- Identify any model weaknesses or scope limitations and their impact.
- Identify and give early warning of any market or portfolio weakness that may become significant.

As well as being an important market risk measurement and control tool, the VaR model is also used to determine a significant component of the market risk capital requirement. Therefore, it is subject to not only ongoing internal review and validation but also regulator-prescribed back-testing.

VaR back-testing*

The main approach employed to assess the ongoing model performance is back-testing, which counts the number of days when a loss exceeds the corresponding daily VaR estimate, measured at a 99% confidence level. There are two types of profit and loss (P&L) used in back-testing comparisons: Clean P&L and Hypothetical (Hypo) P&L.

The Clean P&L figure for a particular business day is the firm's actual P&L for that day in respect of the trading activities within the scope of the firm's regulatory VaR model, adjusted by stripping out:

- Fees and commissions;
- Brokerage;
- Additions to, and releases from, reserves that are not directly related to market risk; and
- Any Day 1 P&L exceeding an amount of £500,000 (per transaction).

The Hypo P&L reflects the firm's Clean P&L excluding any intra-day activities.

A portfolio is said to produce a back-testing exception when the Clean or Hypo P&L exceeds the VaR level on a given day. Such an event may be caused by a large market movement or may highlight issues such as missing risk factors or inappropriate time series. Any such issues identified are analysed and addressed through taking appropriate remediation or development action. RBS N.V. monitors both Clean and Hypo back-testing exceptions.

Regulatory back-testing is performed and reported on a daily basis.

Market risk teams also perform back-testing at the lower levels as part of the internal ongoing VaR model validation.

The VaR model is categorised as green, amber or red. A green model is consistent with a good working model and is achieved for models that have four or fewer back-testing exceptions in a 12 month period. For RBS N.V.'s trading book, a green model status was maintained throughout 2014.

SVaR*

As with VaR, the SVaR technique produces estimates of the potential change in the market value of a portfolio, over a specified time horizon, at a given confidence level. SVaR is a VaR-based measure using historical data from a one-year period of stressed market conditions.

A simulation is run daily for 99% VaR on the current portfolio for each 260-day period from 1 January 2005 to the current VaR date, moving forward one day at a time. The SVaR is the worst VaR outcome of the simulated results.

This is in contrast with VaR, which is based on a rolling 401-day historical data set. For the purposes of both internal risk management and regulatory SVaR calculation, a time horizon of ten trading days is assumed with a confidence level of 99%.

Risks not in VaR (RNIV)*

The RNIV approach is used for market risks that fall within the scope of VaR and SVaR but that are insufficiently captured by the model methodology, for example due to a lack of suitable historical data. The RNIV framework has been developed to quantify these market risks and to ensure that RBS N.V. holds adequate capital.

*unaudited

Traded market risk continued

The need for an RNIV is typically identified in one of the following two circumstances: (i) as part of the New Product Risk Assessment process, when a risk manager assesses that the associated risk is not adequately captured by the VaR model; or (ii) as a result of a recommendation made by Model Risk or the model validation team when reviewing the VaR model.

The RNIVs provide a capital estimate of risks not captured in the VaR model and are regularly reported and discussed with senior management and the regulator. The methodology used in the material RNIV calculations is internally reviewed by Model Risk. Where appropriate, risk managers set sensitivity limits to control specific risk factors giving rise to the RNIV. RNIVs form an integral part of RBS N.V.'s ongoing model and data improvement efforts to capture all market risks in scope for model approval in VaR and SVaR. Since the introduction of the RNIV framework, progress has been made in transitioning RNIVs into the VaR model.

RBS N.V. adopts two approaches for the quantification of RNIVs:

- A standalone VaR approach. Under this approach, two values are calculated: (i) the VaR RNIV; and (ii) the SVaR RNIV.
- A stress-scenario approach. Under this approach, an assessment of ten-day extreme, but plausible, market moves is used in combination with position sensitivities to give a stress-type loss number – the stressed RNIV value.

For each legal entity covered by RBS Group's PRA VaR model waiver, RNIVs are aggregated to obtain the following three measures: (i) Total VaR RNIV; (ii) Total SVaR RNIV; and (iii) Total stressed RNIV. A similar process is followed for the market risk in RBS N.V.. In each case, no allowance is made for potential diversification in respect of material RNIVs.

Stress testing*

RBS N.V. undertakes daily market risk stress testing to identify vulnerabilities and potential losses in excess of or not captured in VaR. The calculated stresses measure the impact of changes in risk factors on the fair values of RBS N.V.'s trading and available-for-sale portfolios. RBS N.V. conducts scenario-based sensitivity analysis and historical and vulnerability-based stress testing.

Scenario-based sensitivity analysis measures the sensitivity of the current portfolio to defined movements in market risk factors. These risk factor movements and the resulting valuation changes are typically smaller than those considered in other stress tests.

Historical stress testing is a measure that is used for internal management. Using a similar technical framework to VaR, the current portfolio is stressed using historical data since 1 January 2005. The methodology simulates the impact of the worst loss that would be incurred by historical risk factor movements over the period, assuming a holding period specific to the risk factors and the businesses.

At present, a holding period of 60 business days is applied for credit risk factors (including in the case of ABS) and for the AFS portfolios that are held by CIB Treasury and generally a period of 10 business days for other risk factors. RBS Group reviews the holding periods annually.

*unaudited

Historical stress tests form part of the RBS N.V. market risk limit framework and stress test exposures are discussed with senior management and relevant information is reported to the RBS N.V. Risk and Control Committee (RCC), the RBS Group Board and the RBS N.V. Managing Board. Breaches in RBS N.V.'s market risk stress testing limits are monitored and reported.

Vulnerability-based stress testing begins with the analysis of a portfolio and expresses the key vulnerabilities of the portfolio in terms of plausible, so-called vulnerability scenarios under which the portfolio would suffer material losses. These scenarios can be historical, forward-looking, macroeconomic or hypothetical. Vulnerability-based stress testing is used for internal management information and is not subject to limits. However, relevant scenarios are reported to senior management.

In addition, RBS Group carries out macroeconomic stress tests periodically as part of the firm-wide, cross-risk capital planning process. The scenario narratives are translated into risk factor shocks using historical events and insights by economists, risk managers and the front office. Market risk stress results are combined with those for other risks into the capital plan that is presented to the RBS Group Board. The cross-risk capital planning process is conducted twice a year, in April/May and October/November, with a planning horizon of five years. The scenario narratives cover both regulatory scenarios such as the PRA Anchor and the Federal Reserve Comprehensive Capital Analysis and Review and macroeconomic scenarios identified by the firm such as a euro crisis and a China hard landing.

Calculation of regulatory capital*

The market risks subject to capital requirements under Pillar 1 are primarily interest rate, credit spread and equity risks in the trading book. Interest rate and equity risks are split between general and specific risks. General risks represent market risks due to a move in a market as a whole, such as a main index or yield curve, while specific risks represent market risks arising from events particular to an underlying issuer.

Firms can choose from two broad methodologies to calculate their market risk capital charge: (i) the standard rules, whereby regulator-prescribed rules must be applied, and (ii) the internal model approach, where, subject to regulatory approval, a model such as VaR is used to calculate the capital charge.

The VaR model has been approved by the DNB to calculate regulatory capital for the trading book via a scaling approach of 10 days. RBS N.V.'s SVaR model has also been approved by the DNB for use in the capital requirement calculation.

The regulatory VaR and SVaR differ from internal VaR and SVaR as they cover only regulator-approved products, locations and legal entities. VaR and SVaR capture general and specific risks but not risks arising from the impact of defaults and rating changes associated with traded credit products and their derivatives.

The Incremental Risk Charge (IRC) model captures risks arising from defaults and rating changes for the more liquid traded credit instruments and their derivatives held in the trading book. It is calculated over a one year horizon to a 99.9% confidence level, and therefore represents a 1-in-1,000 loss over the following year.

Financial review Capital and risk management

Market risk analyses

Trading VaR

The table below analyses the internal VaR for RBS N.V.'s trading portfolios segregated by type of market risk exposure.

Trading VaR summary	2014				2013				2012			
	Average €m	Period end €m	Maximum €m	Minimum €m	Average €m	Period end €m	Maximum €m	Minimum €m	Average €m	Period end €m	Maximum €m	Minimum €m
Interest rate	2.1	1.8	4.8	1.1	1.7	1.1	3.4	0.7	3.0	2.0	7.4	1.8
Credit spread	2.1	1.8	4.0	0.1	0.2	0.1	0.9	—	1.4	0.8	3.9	0.8
Currency	1.4	1.5	3.0	0.6	1.1	0.8	2.6	0.4	1.7	1.3	11.3	0.6
Equity	0.5	0.2	1.3	0.1	0.3	0.1	1.1	0.1	2.1	0.7	9.7	0.5
Commodity	0.4	0.7	1.0	0.1	0.2	—	1.5	—	0.9	0.6	3.1	0.4
Diversification (1)		(3.3)				(0.5)				(2.8)		
Total	3.2	2.7	5.7	2.0	2.0	1.6	3.4	0.9	4.4	2.6	11.3	2.1

Note:

- (1) RBS N.V. benefits from diversification, which reflects the risk reduction achieved by allocating investments across various financial instrument types, industry counterparties, currencies and regions. The extent of diversification benefit depends on the correlation between the assets and risk factors in the portfolio at a particular time.

Key points

- The main driver of the higher VaR utilisation in 2014 was an increase in volatility related to an onshore renminbi currency position that RBS N.V. holds as a result of the unwinding of the equity business.
- In addition, improvements to certain information technology architectures resulted in a degree of VaR volatility during H1 2014.

Valuation and independent price verification

Within RBS Group, traders are responsible for marking-to-market their trading book positions daily, ensuring that assets and liabilities in the trading book are measured at their fair value. Any profits or losses on the revaluation of positions are recognised daily.

Product controllers are responsible for ensuring that independent price verification processes are in place covering all trading book positions held by their business. Independent price verification and trader supervision are the key controls over front office marking of positions.

The validation of pricing models is discussed below.

Model validation

RBS Group's independent model validation framework governing both pricing models and risk models (including VaR) is described below.

RBS Group uses a variety of models to manage and measure market risk, as described below. These models comprise pricing models (used for valuation of positions) and risk models (for risk measurement and capital calculation purposes). They are developed in both RBS Group-level and lower-level functions and are subject to independent review and sign-off.

A dedicated independent model review and challenge function - Model Risk - performs reviews of relevant models in two instances: (i) for new models or amendments to existing models and (ii) as part of its ongoing programme to assess the performance of these models.

*unaudited

A new model is typically introduced when an existing model is no longer fit for purpose or a new product requires a new methodology or model to quantify the risk appropriately. Amendments are usually made when a weakness is identified during use of a model or following analysis either by the model developers or by Model Risk.

Pricing models*

Pricing models are developed by a dedicated front office quantitative team, in conjunction with the trading desk. They are used for the valuation of positions for which prices are not directly observable and for the risk management of the portfolio.

Any pricing models that are used as the basis for valuing books and records are subject to approval and oversight by asset-level modelled product review committees.

These committees comprise representatives of the major stakeholders in the valuation process - trading, finance, market risk, model development and model review functions.

The review process comprises the following steps:

- The committees prioritise models for review by Model Risk, considering the materiality of the risk booked against the model and an assessment of the degree of model risk, that is the valuation uncertainty arising from the choice of modelling assumptions.
- Model Risk quantifies the model risk by comparing front office model outputs with those of alternative models independently developed by Model Risk.
- The sensitivities derived from the pricing models are validated.
- The conclusions of the review are used by Market Risk to inform risk limits and by Finance to inform model reserves.

Traded market risk continued

Risk models*

All new risk models are subject to review and sign-off by Model Risk. All model changes are approved through model governance at the franchise level. Changes to existing models that have an impact on VaR exceeding 5% at legal entity level or 15% at a major business level are also subject to Model Risk review and sign-off as are all model changes that require regulator approval before implementation.

Model Risk's independent review comprises some or all of the following steps, as appropriate:

- Testing and challenging the logical and conceptual soundness of the methodology;
- Testing the assumptions underlying the model, where feasible, against actual behaviour. In its validation report, Model Risk will opine on the reasonableness and stability of the assumptions and specify which assumptions, if any, should be routinely monitored in production;
- Testing whether all key market risks have been sufficiently captured;
- Re-applying the proposed approach to verify that the same outcome is achieved;
- Comparing outputs with results from alternative methods;
- Testing parameter selection and calibration;
- Ensuring model outputs are sufficiently conservative in areas where there is significant model uncertainty;
- Confirming the applicability of tests for accuracy and stability; recalculating and ensuring that results are robust; and
- Ensuring appropriate sensitivity analysis has been performed and documented.

Based on the review and findings from Model Risk, an internal model governance committee with appropriate delegated authority considers whether a model can be approved for use and whether any conditions need to be imposed, including those relating to the remediation of material issues raised through the review process. Once approved through internal governance, the new or amended model is implemented. Models used by RBS N.V. for regulatory reporting may additionally require DNB approval before implementation.

Model Risk also reassesses the appropriateness of approved risk models on a periodic basis according to the approved Periodic Review Policy. Each periodic review consists of a quick scan assessment and a subsequent decision by an internal model governance committee with appropriate delegated authority to re-ratify a model based on the quick scan assessment or to perform additional work prior to making a decision whether or not to re-ratify a model. In the quick scan assessment Model Risk assesses changes since the last approval along the following dimensions: change in size/composition of the portfolio, market changes, model performance, model changes, status of any outstanding issues, scheduled activities including work carried over from previous reviews.

*unaudited

This independent oversight also provides additional assurance that RBS Group holds appropriate capital for the market risk to which it is exposed.

The model testing team in Market Risk also performs regular VaR model testing, which is discussed in more detail under Risk measurement - value-at-risk on page 61.

Non-traded market risk

RBS N.V. manages non-traded market risk separately for non-traded interest rate risk and non-traded foreign exchange risk.

Controls and assurance

The ERF approves the non-traded market risk framework. The non-traded market risk policy statement sets out the governance and risk management framework through effective identification, measurement, reporting, mitigation, monitoring and control.

The models used for managing non-traded market risk are subject to the validation process described above.

Risk appetite*

RBS N.V.'s appetite for non-traded market risk is approved by the Supervisory Board limits as recommended by the Director of Market Risk and the ALCo. Further information on the process and the limit framework can be found on pages 38 and 39.

Interest rate risk

RBS N.V. policy is to manage interest rate sensitivity in banking book portfolios within defined risk limits. Interest rate risk is transferred from the banking divisions to RBS N.V. Treasury. Aggregate positions are then hedged externally using cash and derivative instruments, primarily interest rate swaps, to manage exposures within the RBS N.V. Asset and Liability Management Committee approved limits. RBS N.V. is required to manage non-traded interest rate risk (NTIRR) through transactions with RBS plc to the greatest extent possible.

Residual risk positions are routinely reported to ALCo, the Managing and Supervisory Boards and the RCC.

Key measures used to evaluate NTIRR are subjected to approval granted by the ALCo. Limits on NTIRR are set according to the Non-Trading Interest Rate and Foreign Currency Risk Policy Statement and are subject to RBS N.V. ALCo approval.

NTIRR is measured using a version of the same Value at Risk (VaR) methodology that is used by RBS Group. VaR metrics are based on interest rate repricing gap reports as at the reporting date. These incorporate customer products and associated funding and hedging transactions as well as non-financial assets and liabilities such as property, equipment, capital and reserves. Behavioural assumptions are applied as appropriate.

NTIRR one-day VaR at 99% confidence level for RBS N.V.'s retail and commercial banking activities was as follows. The figures exclude the banking books of Short Term Markets and Finance (STMF) which are managed by the traded market risk function.

Financial review Capital and risk management

	Average €m	Period end €m	Maximum €m	Minimum €m
2014	8.6	6.3	9.9	5.4
2013	5.4	10.1	10.6	2.0
2012	6.0	5.2	9.6	4.4

Key point

- RBS N.V.'s exposure to interest rate risk fell from end-2013 to end-2014 as a result of further business transfers to RBS plc as well as shorter maturity assumptions for some capital securities.

Structural foreign currency exposures

RBS N.V. does not maintain material non-trading open currency positions, other than the structural foreign currency translation exposures arising from its investments in foreign subsidiaries and associated undertakings and their related currency funding.

The table below sets out RBS N.V.'s structural foreign currency exposures.

	Net investments in foreign operations (1) €m	Net investment hedges €m	Structural foreign currency exposures €m
2014			
US dollar	1,047	(687)	360
Pound sterling	277	(215)	62
Other non-euro	2,025	(1,770)	255
	<u>3,349</u>	<u>(2,672)</u>	<u>677</u>
2013			
US dollar	1,176	(533)	643
Pound sterling	(15)	15	—
Other non-euro	1,768	(1,660)	108
	<u>2,929</u>	<u>(2,178)</u>	<u>751</u>
2012			
US dollar	1,259	(960)	299
Pound sterling	(397)	75	(322)
Other non-euro	2,558	(2,034)	524
	<u>3,420</u>	<u>(2,919)</u>	<u>501</u>

Note:

(1) Includes minority participations.

Key points

- RBS N.V.'s structural foreign currency exposure at 31 December 2014 was €0.7 billion, a net decrease of €0.1 billion on 2013. Net investments in foreign operations increased by €0.4 billion, while net investment hedges increased by €0.5 billion.
- Changes in foreign currency exchange rates will affect equity in proportion to structural foreign currency exposure. A 10% strengthening in foreign currencies against the euro would result in a gain in equity of €75 million (2013 - €75 million; 2012 - €45 million), while a 10% weakening would result in a loss of €62 million (2013 - €75 million; 2012 - €55 million).

Country risk

Definition

Country risk is the risk of losses occurring as a result of either a country event or unfavourable country operating conditions. As country events may simultaneously affect all or many individual exposures to a country, country event risk is a concentration risk. For other types of concentration risks such as product, sector or single-name concentration, refer to the Credit risk section.

Sources of risk

Country risk has the potential to affect all parts of RBS N.V.'s portfolio across wholesale and retail activities that are directly or indirectly linked to the country in question. It arises from possible economic or political events in each country to which RBS N.V. has exposure, and from unfavourable conditions affecting daily operations in a country.

Country events may include a sovereign default, a political conflict, a banking crisis or a deep and prolonged recession leading to possible counterparty defaults. Transfer or convertibility restrictions imposed by a country's government to stem the loss of foreign currency reserves may temporarily prevent counterparties from meeting their foreign currency payment obligations. Major currency depreciation may also affect a customer's income or debt burden, leading to default.

Unfavourable operating conditions may include the risk that a weak or creditor-unfriendly legal system within a country makes it difficult for RBS N.V. to recover its claims in the event of customer default. An unreliable or unstable political system may lead to sudden compliance or reputational issues, or even expropriation without proper compensation.

Overview*

The conflict between Ukraine and Russia and the consequent escalating tensions between Russia and the West triggered an internal review of credit grades and limits.

The eurozone region emerged from recession, with some of the periphery countries recovering but growth in other countries, including Germany mostly sluggish. The EU's Single Supervisory Mechanism (SSM) commenced in November 2014 when the European Central Bank (ECB) assumed supervisory responsibility for the 130 largest banks of the eurozone, after concluding a detailed Asset Quality Review of their books, adjusting balance sheets and stress testing their capital positions. This SSM is the first pillar of the EU Banking Union that should reduce the risk of a repeat of the financial crisis over the longer term and that helps to support the quality of the bank's exposure, particularly in Europe. The other pillar will be the Single Resolution Mechanism, scheduled for 2016.

Important shifts in exposure occurred in 2014 as a result of the sale of a significant portion of RBS N.V.'s liquidity portfolio bonds following internal asset quality reviews and stress tests. The sale consisted of Spanish covered bonds, contributing to a reduction in Spanish net balance sheet exposure to €0.1 billion (2013 - €5.0 billion; 2012 - €6.0 billion).

Outlook for 2015*

In 2015, recovery in the advanced economies will likely remain uneven, with widening differentials between the US and Europe in growth, price levels and policies. The policy divergence will be amplified by the January 2015 ECB announcement of a €1,000 billion quantitative easing programme, aimed at reversing deflation and stimulating credit growth, while the US Federal Reserve is expected to start tightening interest rates in the second half of 2015.

The Chinese economy continues its structural slowdown; broad reforms aim at ensuring more sustainable long-term growth, but accumulated financial vulnerabilities bear downside risks. Growth in emerging markets is expected to be restrained by reduced capital inflows, depressed global commodity prices, and geopolitical conflicts, at times resulting in market volatility in the most vulnerable economies.

Governance*

All country exposures in RBS N.V. are covered by RBS Group's country risk framework and a further set of specific RBS N.V. country limits.

The RBS Group's country risk framework is set by the RBS Group Executive Risk Forum (ERF). This body delegates authority to set sovereign ratings, sovereign loss-given-default rates, and country Watchlist colours to the Group Chief Credit Officer (CCO), who may further delegate this authority to Strategic Risk. The ERF delegates authority to decide on country risk matters such as risk appetite, risk management strategy and framework, and risk exposure and policy to the Credit Risk Committee (CRC), which may further delegate to Country Risk Management (CoRM). This includes the setting of country limits, where appropriate including allocations for specific product groups. The CCO and CRC can escalate issues to the ERF when necessary.

For further information on governance, refer to the Risk governance section on page 24.

Risk appetite*

RBS Group's country risk appetite framework has "top-down" and "bottom-up" components.

The top-down component is guided by RBS Group's global risk appetite; each country's internal sovereign rating; its strategic importance to RBS Group; the composition of RBS Group's portfolio; the funding profile; and an assessment of the potential for losses arising from possible key country risk events. This component provides a clear structure for the consideration of downside scenarios, the identification of countries that pose material concentration risks to RBS Group, and possible management actions.

Bottom-up analysis includes the risk/return relationship as well as reputational and regulatory risk.

*unaudited

Country risk *continued*

RBS Group country limits are set for almost all countries. The UK is an exception, given its home country status. The US is another exception because of the specific local risk management structure, the size of the local portfolio and corresponding role in RBS Group-wide risk management, together with the country's strong ratings and corresponding role in RBS Group-wide risk management, together with the country's strong ratings.

Specific RBS N.V. country limits (capped by the overall RBS Group limits) are set by the RBS N.V. Risk and Control Committee, which reports to the RBS N.V. Board. The RBS N.V. country limits leave only limited headroom for countries to which most of the RBS N.V. exposure has migrated and that are on run-off, while allowing sufficient room for a small number of 'active' countries where exposure is still awaiting migration. Exposures to the Netherlands (the RBS N.V. home country), the UK and the US, are exempt from RBS N.V. country limits.

Risk mitigation*

Part of RBS N.V.'s exposure is mitigated by guarantors or insurers (including export credit agencies), credit default swap (CDS) protection providers, or collateral in third countries, which will not be directly affected by a country event in the obligor's country. Further details on credit mitigation instruments are provided in the Credit risk section.

CDS contracts are used to hedge either entire portfolios or specific individual exposures. These transactions are subject to regular margining, which usually takes the form of cash collateral. For European peripheral sovereigns, credit protection is purchased from a number of major European banks, mostly outside the country of the reference entity. In a few cases where protection was bought from banks in the country of the reference entity, giving rise to wrong-way risk, this risk is mitigated through specific collateralisation and monitored weekly.

Risk monitoring*

The CoRM team monitors and reports on RBS Group exposures to all countries, and follows up in the event of limit excesses. CoRM has delegated authority up to specified levels to decide on RBS Group country limit increases; any such decision must be reported to the CRC. Persistent excesses are escalated to the CRC. Regular reports that summarise RBS N.V.'s remaining country risks are sent to senior RBS N.V. management and RBS N.V. limit excesses are followed up.

A country risk Watchlist process identifies emerging issues, facilitating the development of mitigation strategies.

Countries Watchlisted Amber are monitored closely. Appetite for countries Watchlisted Red is limited to short-term business in areas such as trade finance and derivatives, unless the country is deemed a strategic priority country.

Detailed portfolio reviews are conducted to ensure that the composition of country portfolios remains aligned with RBS Group's country risk appetite in light of economic and political developments. Changes in sovereign ratings or country Watchlist status trigger a review of appetite and, where appropriate, are referred to the CRC for discussion.

Measurement*

In this section, country exposure includes wholesale and retail net on-balance sheet exposure (drawn amounts under lending facilities, net of provisions, mark-to-market derivatives positions and issuer-risk debt securities positions in the banking book and trading book) together with off-balance sheet exposure (contingent obligations and undrawn commitments).

RBS Group also estimates its funding mismatches at risk of redenomination in vulnerable eurozone countries. These mismatches are defined as the exposures (net of provisions) that would be expected to convert to a new national currency minus the liabilities that would be expected to re-denominate at the same time. The exposures exclude balances at low risk of redenomination, as identified through consideration of the relevant documentation, particularly the currency of exposure, governing law, court of jurisdiction, precise definition of the contract currency (for euro facilities), and location of payment. Similar estimates are made for RBS N.V.. It is noted that RBS Group has publicly stated it will support RBS N.V. in case of need.

Basis of preparation

The tables in this section show RBS N.V.'s exposure at 31 December 2014, 2013 and 2012. Exposures are reported by country of operation of the obligor, except exposures to governments and individuals, which are shown by country of residence.

The country of operation is the country where the main operating assets of a legal entity are held, or where its main cash flows are generated, taking account of the entity's dependency on subsidiaries' activities.

Countries shown are those which had ratings of A+ or below from Standard and Poor's, Moody's or Fitch at 31 December 2014, where RBS N.V.'s balance sheet exposure (as defined in this section) to counterparties operating (or individuals residing) in them exceeded €0.5 billion. Also included are selected eurozone countries.

The exposures are stated before taking into account risk mitigants such as guarantees, insurance or collateral (with the exception of reverse repos) which may have been put in place to reduce or eliminate exposure to country risk events. The tables show net CDS positions separately, as RBS N.V. may be either a net buyer or a net seller of protection.

Notes:

- (1) Net lending - Comprises loans and advances, including cash balances and risk elements in lending - net of provisions.
- (2) Debt securities - Comprise securities classified as available-for-sale (AFS), loans and receivables (LAR), held-for-trading (HFT) and designated as at fair value through profit or loss (DFV). All debt securities other than LAR securities are carried at fair value. LAR debt securities are carried at amortised cost less impairment. HFT debt securities are presented as long positions (including DFV securities) net of short positions per country. Impairment losses and exchange differences relating to AFS debt securities, together with interest, are recognised in the income statement. Other changes in the fair value of AFS securities are reported in AFS reserves.
- (3) Derivatives (net) - Comprise the mark-to-market (mtm) value of such contracts after the effect of legally enforceable netting agreements in line with the corresponding regulatory capital models, but before the effect of collateral.
- (4) Securities financing transactions (SFT) (net) - Comprise the mtm value of the cash and securities that are due to RBS Group at a future date under repurchase agreements, reverse repurchase agreements, stock borrowing, stock lending and equity financing transactions, after the effect of collateral intrinsic to the transaction and legally enforceable netting agreements. Counterparty netting is applied as per the corresponding regulatory capital approach. Additional collateral called to offset mtm positions (variation margin) is not included.
- (5) Net balance sheet exposure - Comprises net lending, debt securities, derivatives (net) and SFT (net) exposures, as defined above.
- (6) Off-balance sheet - Comprises net letters of credit, guarantees, other contingent obligations and legally committed undrawn facilities.
- (7) Total exposure - Comprises net balance sheet exposure and off-balance sheet exposure, as defined above.
- (8) Credit default swaps (CDSs) - Under a CDS contract, the credit risk on the reference entity is transferred from the buyer to the seller. 'Fair value' (or 'mtm value') represents the balance sheet carrying value of the resulting exposure. The mtm value of CDSs is included in derivatives against the counterparty of the trade, as opposed to the reference entity. The notional is the par value of the credit protection bought or sold and is included against the reference entity of the CDS contract. The column 'CDS notional less fair value' represents the net effect on exposure should the CDS contracts be triggered by a credit event, assuming a zero recovery rate on the reference exposure. This net effect would be the increase in exposure arising from sold positions netted against the decrease arising from bought positions. For a sold position, the change in exposure equals the notional less the fair value amount; this represents the amount RBS N.V. would owe to its CDS counterparties if the reference entity defaulted. Positive recovery rates would tend to reduce the gross components (increases and decreases) of those numbers. Exposures relating to credit derivative product companies (CDPCs) and related hedges as well as Nth-to-default basket swaps have been excluded, as they cannot be meaningfully attributed to a particular reference entity or country.
- (9) Sovereign - Comprises central, regional and local government, and central banks.
- (10) Eurozone periphery - Italy, Spain, Ireland, Portugal, Greece and Cyprus.
- (11) Other eurozone - Austria, Estonia, Finland, Latvia, Malta, Slovakia and Slovenia. The Netherlands, while being a eurozone country, has been excluded in these country risk tables as RBS N.V. is based in the Netherlands.

Key points*

- During 2014, the US dollar and sterling appreciated against the euro by 13.3% and 7.0% respectively, impacting exposures.
- Balance sheet and off-balance sheet exposures to nearly all countries were further wound down during 2014, after the major exposure migrations to RBS plc in 2012-2013.
- Total eurozone (excluding the Netherlands) – net balance sheet exposure declined by €6.8 billion or 73% to €2.5 billion, largely caused by the sale of AFS debt securities exposure, mostly to Spain, from the bank's liquidity portfolio.
- Eurozone periphery – net balance sheet exposure decreased to €1.2 billion, a reduction of €5.6 billion or 82%, largely caused by the sale of Spanish AFS securities.
 - Italy - AFS government bonds exposure decreased by €0.4 billion. The remaining exposure of €1.0 billion mainly comprised €0.7 billion of (largely collateralised) derivatives exposure to banks and €0.2 billion of AFS government bonds. The latter was covered by bought CDS protection.
 - Spain - net balance sheet exposure decreased to less than €0.1 billion, due to sales of €4.8 billion (mostly covered bonds) from RBS N.V.'s liquidity portfolio, under favourable market conditions. These sales also removed risk concentrations in Spanish banks and commercial real estate.
 - Ireland - The AFS government bonds held in the liquidity portfolio (€0.2 billion) were sold.
 - Funding mismatches - the estimated funding mismatch at risk of redenomination at 31 December 2014 remained approximately €0.5 billion for Italy, and was reduced to minimal for Spain (down from €5.0 billion, due to the sale of AFS bond holdings). The net positions for Ireland, Portugal, Cyprus and Greece all continued to be minimal. With the possible exception of Greece, risks of eurozone break-up (redenomination events) have materially receded since 2011-2012, owing to major improvements in liquidity conditions, driven by the availability of substantial new tools for the European Central Bank, the establishment of the European Stability Mechanism and member countries' progress on reducing imbalances.
- India - lending increased by €0.1 billion, reflecting currency movements and some increases in the non-bank FI and electricity sectors. In AFS debt exposure, €0.2 billion of bonds issues by banks were replaced by government bonds.
- China - lending to banks and off-balance sheet exposure decreased by €0.8 billion and €0.5 billion respectively to €0.2 billion and €0.3 billion, mostly in trade finance, driven by more stringent capital requirements and an effort by RBS N.V. to improve average returns in a highly competitive environment. AFS government bonds increased by €0.1 billion, representing increased liquidity.

*unaudited

Other risks*

Business risk

Definition

Business risk is the risk that RBS N.V. suffers losses as a result of adverse variances in its revenues, costs or both as a result of its business plan and strategy

Sources of risk

Business risk exists at all levels of the organisation and is generated at the transaction level. It is affected by other risks RBS N.V. faces, which could contribute to any adverse changes in revenues or costs.

Governance

The Managing Board has ultimate responsibility for business risk. Responsibility for the day-to-day management of business risk lies primarily with the franchises with oversight by the Finance function.

Risk Management, measurement and mitigation

RBS N.V. seeks to minimise its exposure to business risk, subject to its wider strategic objectives. Business risk is identified, measured and managed through planning cycles and performance management processes. Expected profiles for revenues and costs are determined, on a bottom-up basis, through plans reflecting expectations of the external environment and RBS N.V.'s strategic priorities. The Managing Board has ultimate responsibility for the impact of any volatility in revenues and costs on RBS N.V.'s performance.

Strategic risk

Definition

Strategic risk is the risk that RBS N.V. will make inappropriate strategic choices or that there will be changes in the external environment to which the RNSH Group fails to adapt its strategies.

Sources of risk

Strategic risk arises from decisions that fail to reflect the operating environment, or which do not take adequate account of execution challenges. These include decisions related to RBS N.V. products and services which have implications for profitability, risk, the customer base, and for business growth.

Failure to manage this risk could have a wide-ranging impact. It could lower revenues, profitability and returns to shareholders, and severely impair RBS N.V.'s ability to meet other financial and non-financial objectives.

Governance

Responsibility for the management of the bank's strategic risks resides ultimately with the Managing Board of RBS N.V..

Risk management, measurement and mitigation

Strategic progress is monitored through regular performance reviews and deviations from the expected values are analysed to determine drivers. Also sensitivity analysis of the strategic plan is undertaken to assess the robustness of the plan under stressed conditions represented by a variety of scenarios.

Corporate governance

Introduction

Corporate governance is conducted on an overall basis within RBSH Group, therefore discussions in relation to RBSH Group are relevant for RBS N.V..

RBS N.V. maintains high corporate governance standards and its operations are guided by its code of conduct.

In order to achieve good corporate governance RBS N.V. organises the business in a way that promotes first-class stewardship by the Managing Board and effective supervision by the Supervisory Board. Integrity, transparency and accountability are key elements of RBS N.V.'s corporate governance, as they are embedded in RBS N.V.'s business as a whole. These key elements ensure that the controls and oversight necessary for effective risk management, compliance with regulations, and accurate and complete disclosure of information to the market are effective.

The Supervisory Board of RBS N.V. has prepared its annual report which is published on pages 79 and 80 of this report. The report provides an overview of its activities during 2014.

Corporate governance in the Netherlands Dutch Corporate Governance Code

As a result of the delisting in 2008, RBS Holdings is no longer required to adhere to Dutch Corporate Governance Code. RBS N.V. ensures proper corporate governance by focusing on the Dutch Banking Code (Code Banken) which caters for specific corporate governance rules for banks. However as the Dutch Corporate Governance Code is of great standing within the Netherlands, RBS N.V. adheres where possible.

The Dutch Banking Code (Code Banken)

The Code Banken came into force on 1 January 2010 and was updated on 1 January 2015. It requires banks to either comply with the Code Banken or explain any deviation from it. The Code Banken is applicable to RBS N.V. as it has a banking licence issued under the Dutch Financial Supervision Act. A further explanation on compliance with the Code Banken, including an update on the latest version, is provided on page 89 of this report.

Capital Requirements Directive III (CRD III)

CRD III contains certain provisions on capital requirements for trading portfolios and securitisations. It also contains principles on sound compensation policies. Each member state of the European Union has the requirement to implement the directive in their national legislation.

RBS N.V. adheres fully to the principles of CRD III that were implemented in the Netherlands.

Capital Requirements Directive IV (CRD IV)

On 1 January 2014, CRD IV came into force in the European Union. The Directive contains several Corporate Governance related requirements, which were implemented in Dutch law on 1 August 2014. Specific provisions have been integrated into the operations of the Supervisory Board to comply with the specific requirements.

European Banking Authority (EBA) guidelines on internal governance

The EBA has issued guidelines relating to internal governance arrangements of credit institutions. These take into account weaknesses identified in the financial crisis and build upon the Committee of European Banking Supervisors (CEBS) Guidelines.

The EBA guidelines are implemented by the local competent authorities, which is the Dutch Central Bank. RBS N.V. adheres to the implemented guidelines.

DNB Principles on Sound Remuneration

The principles of sound compensation policies were implemented by the publication of the Regulation by the Dutch Central Bank on Sound Compensation Policies for Financial Institutions, which came into effect on 1 January 2011 and was updated in 2014. RBS N.V. adheres fully to these principles.

Further details of the remuneration policy can be found in the RBS Group's 2014 Annual Report & Accounts, available at www.rbs.com.

Approval of Annual Report

The Managing Board approved the Annual Report at its meeting on 30 April 2015. The Supervisory Board approved the Annual Report at its meeting on 30 April 2015. RBS N.V. has proposed to its Shareholders that it adopts the 2014 financial statements, as included in this Annual Report, and discharge the Managing Board and Supervisory Board in respect of their management and supervision respectively.

Boards and Committees

RBS Holdings and RBS N.V. are both companies with limited liability incorporated under the laws of the Netherlands. Both companies have a two-tier system of corporate governance; consisting of a Supervisory Board and a Managing Board. The day to day management of the companies vests with the Managing Board. The Supervisory Board provides oversight and advice to the Managing Board. The members of the Managing Board and Supervisory Board of RBS Holdings and RBS N.V. are the same.

Corporate governance

The report of the Supervisory Board

Dear Reader,

It is with great pleasure that I present to you the 2014 report of the Supervisory Board. This report provides you with an overview of the tasks and the activities of the Board during 2014.

In 2014 RBS Holdings continued to make good progress towards completing the transfers of businesses and assets to RBS plc. In addition to individual assets & liabilities, the RBS N.V. business in Thailand transferred over to RBS plc.

The Supervisory Board has closely monitored the ongoing integration process in the past years and is pleased that the majority of its integration activities were completed successfully and on schedule by the end of 2013, clearing the road for the one-bank strategy of the RBS Group.

The Supervisory Board had oversight of the execution of this strategy, working together with the Managing Board through its meetings and conference calls. The Supervisory Board challenged the Managing Board on client focus, the timing and speed at which transfers were taking place and the potential impact on the bank's international network. The corporate strategy was regularly discussed at Supervisory Board meetings in 2014.

Succession planning for the Managing Board and senior management was another important subject addressed by the Supervisory Board through the execution of the integration activities. This has been evidenced by the appointment of Mr Idzard van Eeghen to the Managing Board as a replacement for Mr Jeroen Kremers.

The tasks of the Supervisory Board

The main task of the Supervisory Board is to supervise the Managing Board, as well as the general affairs of RBS Holdings and the enterprises connected to it. Furthermore, it assists and advises management and supervises the corporate governance structure of RBS Holdings.

In performing their duties, the members of the Supervisory Board are guided by the interests of RBS N.V. and the businesses connected to it and shall take into account the relevant interests of RBS N.V.'s stakeholders. Certain powers are vested in the Supervisory Board, including the approval of certain resolutions by the Managing Board. A complete overview of the powers vested with the Supervisory Board can be found in the Rules governing the Supervisory Board's Principles and best Practices, which are published on RBS N.V.'s website at www.rbs.nl. These rules are also applicable to the Supervisory Board of RBS N.V. and include provisions on Risk & Audit items that were previously discussed in the separate Risk & Audit Committee of the Supervisory Board. They now also include rules in relation to specific remuneration and nomination topics as prescribed by the implementation of CRD IV in the Netherlands.

Members of the Supervisory Board

The Supervisory Board is an independent corporate body. Members of the Supervisory Board are appointed at the General Meeting of Shareholders. For each vacant seat the Supervisory Board nominates one or more candidates. Under the Dutch Corporate Governance Code, which is mandatory for listed companies and which RBS N.V. adheres to where possible, all members of the Supervisory Board must be independent with the exception of not more than one person. RBS N.V. is not compliant with that standard. RBS N.V. has three Supervisory Board members who cannot be considered as independent within the scope of the Dutch Corporate Governance Code.

Also, the Chairman and Vice-Chairman of the Supervisory Board are appointed by the Supervisory Board from among its members.

On 28 May 2014, Mr Nathan Bostock stepped down as the Chairman of the Supervisory Board. Mr Ewen Stevenson, the RBS Group Chief Financial Officer was appointed as the replacement for Mr Bostock on 11 August 2014.

The Supervisory Board confirms that its current composition has the necessary experience, expertise and independence to ensure that its members are able to properly execute their duties. All appointments were made in accordance with the Supervisory Board profile resulting in the current composition of the board. The Supervisory Board is of the opinion that the addition of a female Supervisory Board member would be beneficial to its functioning and would then align with the RBSG Group policy on diversity and inclusion. The Supervisory Board will therefore strive to identify and nominate a female candidate on the company's Supervisory Board if a vacancy should arise.

Supervisory Board members are appointed for a term of four years and may be re-appointed after that term, with a maximum term of 12 years from the date of their first appointment. In addition, each member is required to resign at the first General Meeting of Shareholders after reaching the age of 70.

Candidates recommended for appointment or re-appointment to the Supervisory Board must meet the criteria of the membership profile, which are set out in the Rules Governing the Supervisory Board's Principles and Best Practices of RBS Holdings, which are also applicable to the Supervisory Board of RBS N.V.

Newly appointed Supervisory Board members undertake an induction programme. The new Supervisory Board members receive relevant documentation necessary for their role in RBS N.V. and undertake a series of meetings with the management of RBS N.V. to gain insight and understanding of RBS N.V. and its enterprises. The programme is tailor-made and is adjusted to the specific needs of the new Supervisory Board member.

Corporate governance

In case of a (potential) conflict of interest of material significance between a member of the Supervisory Board and RBS Holdings, the Chairman of the Supervisory Board shall be notified. If the Chairman of the Supervisory Board has a (potential) conflict of interest of material significance, the Vice-Chairman is notified. The Supervisory Board member concerned will not take part in the assessment by the Supervisory Board where a conflict of interest exists. During 2014, no conflicts of interest have arisen.

Details of the remuneration of the Supervisory Board's can be found on page 150.

Activities of the Supervisory Board

As of the 4th quarter of 2013, the operations of the Risk & Audit Committee, a separate sub committee to the Supervisory Board, were integrated into the operations of the Supervisory Board. As a result, going forward the Supervisory Board does not have a separate sub-committee, but Risk and Audit topics are discussed on a regular basis and a report with deliberations and findings is prepared for each regular meeting. In addition, specific nomination and remuneration topics are discussed on a regular basis. The members of the Supervisory Board collectively have sufficient accounting and financial management expertise to understand RBS N.V.'s business, financial statements and risk profile. The Supervisory Board works alongside RBS Group Remuneration Committee to ensure the implementation of a restrained and long-term remuneration policy which is aligned with the organisation's strategy and risk appetite, whilst also catering for an evermore globalising industry. The Supervisory Board extensively discussed remuneration at one of its meetings, highlighting the focus that this topic continues to receive in the organisation. In addition, specific Remuneration provisions have been included into the Rules of the Supervisory Board.

The Supervisory Board met on 8 occasions during 2014, either via a meeting in person or via telephone conference. On a few occasions the members were also asked to give their approval on a few matters via email procedure.

Composition of the Supervisory Board

The members of the Supervisory Board as at 30 April 2015 are as follows:

		Date of first appointment	Date for re-election
Ewen Stevenson (Chairman)	(49, British/New Zealand, male)	11 August 2014	11 August 2018
Christopher Campbell (Vice-Chairman)	(56, British, male)	23 June 2011	23 June 2015
John Cummins	(53, British, male)	1 October 2013	1 October 2017

Mr Bostock resigned from the Supervisory Board on 28 May 2014.

Mr Stevenson was appointed to the Supervisory Board on 11 August 2014.

Mr Hepkema and Mr Rottinghuis resigned from the Supervisory Board with effect from 1 May 2014.

Furthermore, the Supervisory Board has determined that Mr Ewen Stevenson possesses the necessary relevant expertise in financial administration and accounting for listed companies and other large companies and therefore qualifies as a financial expert within the meaning of the Dutch Corporate Governance Code. It has also been determined that Mr Ewen Stevenson qualifies as an audit committee financial expert in accordance with Section 407 of the Sarbanes-Oxley Act.

The assessment of the functioning of the Managing Board members and Supervisory Board members has taken place in the fourth quarter of 2014 /beginning of 2015.

The Chairman of the Supervisory Board and the Company Secretary prepared the agenda for the meetings of the Supervisory Board in close co-operation with the Chairman of the Managing Board.

The Supervisory Board reviewed and adopted the full year 2013 results at its meeting on 30 April 2014 and reviewed and adopted the half-year financial report 2014 on 28 August 2014. The Board reviewed in these meetings regulatory, control and audit issues, including Sarbanes-Oxley Act 404 compliance.

Throughout 2014, the Supervisory Board received regular updates on the proposed transfers of assets and liabilities to RBS plc. The financial performance of RBS N.V. was extensively discussed during a number of Supervisory Board meetings, which were attended by members of the Managing Board who gave an explanation of the results. Also, relevant members discussed the findings of the internal and external auditors.

Comprehensive information provided by the Managing Board and reviewed by the Supervisory Board gave a clear picture of RBS N.V.'s risks, results, capital and liquidity position.

The strategy of RBS N.V. was determined in conjunction with the divisional strategy of RBS Group and was adopted by the Supervisory Board during its meeting on 9 April 2010 and further updated in their meeting of 8 April 2011. Regular updates were provided during 2014.

The Shareholder reappointed Deloitte Accountants B.V. as the external auditors of RBS Holdings for the statutory reporting of the 2014 financial year. Deloitte LLP was appointed as the auditor for the 2014 20-F filing. All members of the Supervisory Board have complied with the requirement to attend meetings on a frequent basis.

Corporate governance

Ewen Stevenson - Chairman of the Supervisory Board

Mr Stevenson became Chief Financial Officer of The RBS Group in May 2014. He is a member of the RBS Group Board and the RBS Group Executive Committee.

Mr Stevenson was previously at Credit Suisse for 25 years where he was latterly co-Head of the EMEA Investment Banking Division and Co-Head of the Global Financial Institutions Group. Mr Stevenson has over 20 years of experience advising the banking sector while at Credit Suisse.

Mr Stevenson has a Bachelor of Commerce and Administration majoring in Accountancy and a Bachelor of Law from Victoria University of Wellington, New Zealand.

Christopher Campbell - Vice-Chairman of the Supervisory Board

Mr Campbell was appointed as a member of the Supervisory Board on 23 June 2011. Mr Campbell joined RBS Group in August 2005 as Deputy General Counsel and Director, Group Legal and became Group General Counsel in May 2010, in which role Mr Campbell had overall responsibility for advising the RBS Group Board and Executive Committee and for the provision of legal support to all of RBS Group's business globally.

Prior to joining RBS Group, Mr Campbell was a partner for 18 years in Scotland's largest law firm, Dundas & Wilson, and was Managing Partner from 1996 until he joined RBS Group in 2005. Mr Campbell retired from his executive role with RBS Group with effect from 31 March 2015 but continues to be associated with the bank as a non-executive director of Ulster Bank Limited and as a member of the Supervisory Board of RBS Holdings and RBS N.V..

John Cummins

In 2007, Mr Cummins joined RBS Group as Group Treasurer. As Group Treasurer, Mr Cummins manages the treasury function for RBS Group. He is responsible for the management of the RBS Group's capital, liquidity, and structural FX & interest rate risk and his role also includes responsibility for funding the RBS Group balance sheet, and the management of the RBS Group's capital and resources policies.

In his previous role Mr Cummins managed the Treasury function for Standard Life Assurance Group. He also filled the role of Finance Director, Standard Life Bank on an interim basis.

2006 - 2012 Mr Cummins was appointed Director of IFFIm, a AAA rated development institution. The IFFIm Board is responsible for the management of the International Finance Facility for Immunisation Company (IFFIm), registered as a UK Charity. IFFIm has raised over \$4 billion for vaccines in the developing world.

2013 - Mr Cummins was appointed a Trustee for the Sabin Foundation Europe, a UK-registered charity founded in 2011 to support vaccine research and development, advocacy efforts and treatment programs for vaccine - preventable and neglected tropical disease.

Mr Cummins holds an MA in Modern History from Oxford University and an MBA from Bradford University. He completed the Corporate Finance Course at London Business School and attended the Risk Management in Banking programme at INSEAD.

Ewen Stevenson
Chairman of the Supervisory Board

Corporate governance

The report of the Managing Board

The members of the Managing Board of RBS N.V. collectively manage RBS N.V. and are responsible for the general affairs of RBS N.V. business and general affairs of all its subsidiaries. The members are appointed by the General Meeting of Shareholders.

The Supervisory Board of RBS N.V. nominates one or more candidates for each vacant seat. If the Supervisory Board nominates two or more candidates for a vacant seat in the Managing Board, the nomination list is binding. The members of the Managing Board are accountable both collectively and individually for all decisions taken by the Managing Board.

The Chairman of the Managing Board leads the Managing Board in its overall management of RBS N.V. to achieve its performance goals and ambitions. The Chairman of the Managing Board is the main point of liaison with the Supervisory Board. The Chief Financial Officer is responsible for the financial affairs of RBS N.V., and the Chief Risk Officer is responsible for RBS N.V.'s risk management and operational risk control. Alongside their overall corporate responsibilities, the members of the Managing Board are responsible for the management of the segments and control and support functions. The Managing Board has delegated certain tasks to a number of Managing Board committees which are described on page 24 of this report.

Composition of the Managing Board

The members of the Managing Board as at 30 April 2015 are as follows:

		Date of first appointment	Date for re-election
Jan de Ruiter (Chairman)	(53, Dutch, male)	1 April 2010	1 April 2018
Cornelis Visscher	(49, Dutch, male)	18 July 2013	18 July 2017
Michael Geslak	(51, American, male)	1 April 2010	1 April 2018
Idzard van Eeghen	(54, Dutch, male)	18 June 2014	18 June 2018

On 1 April 2014, Mr Jeroen Kremers stepped down from the Managing Board. On 18 June 2014, Mr Idzard van Eeghen was appointed to the Managing Board.

Corporate governance

Jan de Ruiter

Chairman Managing Board RBS Holdings - RBS Group Netherlands Country Executive

Mr de Ruiter started his career at the Dutch Credit Insurance (NCM) in 1984 and moved to ABN Bank in 1987. During his 21 years with ABN AMRO, he held various positions in the wholesale division of the bank. From 1987 until 1993 he was a team member of the Institutional Equity Sales team in Amsterdam and from 1993 until 1998 Head of the European Equity sales team, based in London. In 1998 he became the Head of Equity Capital Markets for the Netherlands (Managing Director ABN AMRO Rothschild). Mr de Ruiter was appointed Corporate Managing Director of ABN AMRO in 2000. In 2003 he became one of the two joint CEO's of ABN AMRO Rothschild. In 2004 he also became responsible for the global Merger & Acquisitions franchise of ABN AMRO. He held both positions until the end of 2007. At the beginning of 2008, following the successful consortium bid for ABN AMRO, he became the country executive of RBS N.V. in the Netherlands. Mr de Ruiter graduated from the HEAO in Utrecht in 1983 (Economics/Law) and also holds an MBA degree from Webster University.

Cornelis Visscher

Chief Financial Officer, RBS Holdings - RBS Group Netherlands Chief Financial Officer

Mr Visscher graduated from the Vrije Universiteit in Amsterdam with a degree in Business Economics, specialised in Financial Accounting and Management Accounting. He started his career at ABN AMRO in 1988, where, after several functions in Divisional and Group Finance, he ultimately became responsible for the delivery of ABN AMRO's Group Management Information. Following the acquisition of (parts of) ABN AMRO by the RBS Group, Mr Visscher became the head of Group Consolidation, in which he was responsible for the split of the ABN Amro accounts between the Consortium members. Furthermore, in 2011 Mr Visscher was seconded to Edinburgh where he became the Head of Financial Control for the Retail & Wealth, Corporate and Business Services Divisions of RBS Group. In this role, he was amongst others responsible for the Offshore programme. As of 2013 he is the CFO for RBS Holdings and a member of the RBS Holdings Managing Board. In addition to this role, he serves as CFO for RBS Netherlands Branch and in this role is part of the Netherlands Country Management team.

Michael Geslak

Chief Administrative Officer - RBS N.V.

Mr Geslak joined ABN AMRO in New York in 1988 as an accountant, in 1992 he formed the Market Risk function in New York, and after moving to Chicago in 1993 became Head of Market Risk for North America. In 1995 he became Head of Investment Banking Operations and Product Control in Chicago, which was later expanded to cover all Investment Banking Operations for North America. In 2000 he was promoted to Chief Administrative Officer for Wholesale Banking in the Americas.

Mr Geslak then moved to London as Global Chief Information Officer for ABN AMRO Wholesale Banking and managed the provision of all technology to the Global Markets and Global Transaction Services businesses. In 2006 he became Head of Services for Global Markets and EMEA. From 2009 to 2012 he became the RBS Group COO for EMEA. His current roles are CAO and Managing Board member for RBS Holdings and Business Services Business Partner for Non-Core and APS.

In addition to these responsibilities, for the past two years Mr Geslak has been leading the programme to de-risk RBS N.V. by transferring businesses to RBS plc.

Idzard van Eeghen

Chief Risk Officer, RBS N.V.

Mr van Eeghen started his career at AMRO Bank in 1984, which later merged into ABN AMRO Bank. From 1988 until 1996 he was corporate relationship manager and senior relationship manager in Eindhoven after which he became senior advisor structured finance in the Wholesale/Investment Bank division. In 1999 he joined the risk management division in Amsterdam where he was respectively Project Manager Regulatory Capital, Head of Credit Ratings & Credit Policies, Head of Credit Ratings & Portfolio Management, and Head of Integrated Risk & Country Risk. After the acquisition of ABN AMRO Bank in 2007 he was a member of the Risk Management Team overseeing the transition of the bank. In this period he was also seconded to Fortis Central Risk Management as Director Risk Performance in Brussels. In 2010 Mr van Eeghen joined RBS Holdings to establish the risk office function of RBS Holdings, which he subsequently headed. In addition, he led the Economic Capital program of RBS Group and was involved with a number of other projects in RBS Group Risk Management. In 2014 Mr. van Eeghen became Chief Risk Officer and member of the Managing Board of RBS Holdings.

Mr. van Eeghen holds a Master's degree in Economics from the State University of Groningen and a Master's degree in Finance from TIAS Business school which is associated with the Tilburg University. Since 2014 he is Executive Fellow of the Duisenberg School of Finance. Mr. van Eeghen is co-author of the book 'Economic Capital: How it Works and What Every Manager Needs to Know' published by Elsevier.

Information, induction and professional development

As part of the Code Banken, both the Managing Board and the Supervisory Board participate in a programme of Life Long Learning. The programme consists of a modular approach, addressing matters that are mentioned in the Code Banken, including relevant developments in the financial sector in general and the banking sector in specific, corporate governance in general the duty of care towards clients, integrity, risk management, financial reporting and audits. Subject matter experts are invited, both from within RBS N.V. and from outside RBS N.V., to deliver education modules on the above mentioned matters.

Performance evaluation

The members of the Managing Board participate in the annual performance management process of RBS Group.

Managing Board committees

In order to provide effective oversight and leadership, the Managing Board has three sub-committees, the Risk & Control committee (RCC), the Asset & Liability management Committee (ALCo) and the Disclosure Committee.

Corporate governance

Risk & Control Committee (RCC)

The Risk & Control Committee (RCC) oversees the risk framework within RBS N.V., monitors the actual risk profile and advises the Managing Board on these matters. Its scope is, amongst others, credit, market, operational and regulatory risk within RBS N.V..

Asset & Liability management Committee (ALCo)

The Managing Board has delegated to the ALCo the responsibility for the management of capital, liquidity, interest rate risk and foreign exchange risk. This includes responsibility for reviewing, approving and allocating balance sheet, capital, liquidity and funding limits.

Disclosure Committee

The Disclosure Committee advises and assists the Managing Board in fulfilling its responsibilities for overseeing the accuracy and timeliness of public disclosures made by RBS N.V.. This inter alia includes advising the Managing Board on the disclosure of financial information.

Code of conduct

The code of conduct applies to everyone who works for RBS Group. It promotes honest and ethical conduct, including the handling of actual or apparent conflicts of interest between personal and professional relationships. RBS N.V. recognises that personal conduct, business integrity and RBS N.V.'s security are crucial, and the code of conduct serves to inform those who work for us of RBS N.V.'s expectations of their behaviour and practices.

The code of conduct is available on RBS Group's website www.rbs.com.

Sustainability

Sustainability at RBS Group means building our business around long term thinking and support for our customers and the communities in which they live. Our core responsibility is to obey the law and to ensure that our business is built on safe and secure financial foundations, and we have worked hard in the years since the financial crisis to achieve this position. This underpins everything that RBS Group does and enables people to run their daily lives and businesses. Our position as a provider of credit supports economic growth and brings wider benefits to society.

But our ambition is to go further, to shape the world around us in a positive way. We recognise that we still have a long way to go achieve this position across our business. Sustainability is therefore not just about the many responsibilities and obligations that RBS Group has, but about taking leadership on a broad range of issues that are important to our Stakeholders.

The RBS Group Sustainable Banking Committee is responsible for overseeing and challenging how management is addressing sustainable banking and reputation issues, considering the long term interests of all stakeholder groups.

For more information on our approach and progress read the RBS Group Sustainability Report, available on rbs.com/sustainable.

Relations with shareholders

Rights of shareholders

Any resolution to amend the Articles of Association of RBS Holdings may only be passed by the General Meeting of Shareholders following a proposal by the Managing Board which has been approved by the Supervisory Board. A copy of the proposal containing the literal text of the proposed amendments shall be made available for inspection by the holders of shares of RBS Holdings at the offices of RBS Holdings and at the offices stated in the convocation to the meeting, from the day of convocation to the end of the Meeting. Each Shareholder may obtain a full copy of the proposal free of charge.

Meetings of shareholders and convocation

The general meetings of shareholders shall be held in Amsterdam, or in The Hague, Rotterdam, Utrecht or Haarlemmermeer (Schiphol). The Annual General Meeting of Shareholders must be held within six months of the end of each financial year. In addition, general meetings of shareholders shall be held as frequently as deemed necessary by the Managing Board or the Supervisory Board and when required by law or by the Articles of Association. General meetings of shareholders shall be convened by the Managing Board or the Supervisory Board, without prejudice to the provisions of Sections 110, 111 and 112 of Book 2 of the Netherlands Civil Code. Convocation shall take place not later than on the fifteenth day prior to the day of the meeting. Convocation shall state the items to be discussed or alternatively notice shall be given that such items may be inspected at the company's offices. Proposals to amend the Articles of Association or proposals relating to a reduction of the company's capital shall always be included in the actual convocation.

Employees

As at 31 December 2014, RBS N.V. employed approximately 1,700 employees (full-time equivalent basis) throughout the world. Details of employee related costs are included in Note 3 on the accounts.

Leadership

Developing great leaders with the capability to deliver our ambition to be number one for customer service, trust and advocacy is a key priority, aligned to our People and Leadership Standards. In 2014 we rolled out Team Effectiveness sessions for new executive teams to help them role model our values and lead the transition to a new RBS Group.

Employee engagement

For RBS Group, building an engaged, healthy and inclusive workforce is crucial. Every year since 1999, through the Our View survey, people in all our businesses have shared their thoughts about what it's like to work at RBS Group. The survey enables our people leaders to monitor levels of engagement and work with their teams to make improvements to the working environment. It also provides a mechanism for RBS Group to track employee perception of our culture and the progress we're making.

Corporate governance

Living our values

The ways that we recruit, promote, reward, and manage our people are all aligned to our values, and this coherent approach is making a difference within the organisation – with more people (year on year) believing our values are making a difference to the way we work.

How we behave forms the character of our company and dictates how others see us. RBS Group's code of conduct, Our Code, reflects our values and applies to everyone who works here. It is supported by the YES Check: a simple decision-making framework to help our people translate Our Code into their day-to-day roles. The YES check has been designed to meet the Financial Conduct Authority's standard of conduct and is underpinned by ethical principles.

Our Code lets everyone know what to expect of each other, what to do when unsure of a decision, and where to go for advice when needed. It's available at [rbs.com>about us>our values](http://rbs.com/about-us/our-values), or without charge, upon request, by contacting Corporate Governance and Secretariat at the telephone number listed on page 194.

Customer performance

Our approach to performance management allows us to provide clarity for our people about how their individual contribution links to our ambition, reward the behaviour that supports our values, and hold individuals to account for behaviour and performance that does not. In 2014 we completed alignment of our approach to performance management across RBS Group, so that in 2015 there is consistent bank-wide use of our balanced scorecard, People standards, Leadership standards, and online system.

Simple organisation

RBS Group is making steady progress towards building a smaller, simpler organisation. In 2014, we defined clear principles and practices around how the organisation would work, and new role accountabilities for the top 150 roles across the RBS Group, as part of redesigning our operating model.

We've moved from seven divisions to three customer franchises, redesigning our supporting functions and services to remove duplication and unnecessary management layers. In addition to supporting our strategic direction, this work has strengthened accountabilities across RBS Group, with robust governance in place to ensure future organisation designs are in line with these principles, positioning us to respond to ongoing regulatory requirements.

Employee consultation

RBS Group recognises employee representatives such as trade unions and work councils in a number of businesses and countries. Our European Employee Council provides an opportunity for elected representatives and management to discuss developments in RBS Group's European operations. Discussions have continued to take place with employee representatives where appropriate on the progress of our strategic plans.

Employee learning and development

RBS Group maintains a strong commitment to providing all our people with the opportunity to grow through learning and development, which in turn helps to achieve business objectives and drive excellent customer service.

Supporting the professionalisation of our front line staff, all of our customer-facing employees are aware of the professional standards expected of them, and as at the end of 2014, 86% have completed related professional development programmes, giving colleagues the skills they need to do their job and serve customers well. Building the capability of our people is also crucial to ensure effective compliance behaviour. RBS Group has mandatory training modules for all employees to improve their understanding of the processes and controls required to properly manage key risks.

Diversity and inclusion

RBS Group's ambition is to be number one for customer service, trust and advocacy in every one of our chosen business areas by 2020, supported by a people commitment to make RBS Group a great place to work. Valuing difference is therefore essential for our customers and colleagues. Our inclusion policy standard applies to all our people globally; and our strategy for diversity and inclusion sits with the RBS Group Board and Executive Committee.

Our approach during 2014/15 focuses on building inclusion into all stages of the employee lifecycle. In 2014 we started rolling out bank-wide unconscious bias learning for all employees, which will continue across 2015. We've introduced a gender target to increase the number of women in senior roles across RBS Group. Also we continue to support our employee-led networks, with membership across RBS Group at over 15,000 people.

This year RBS Group has been recognised for its work on Equality, Diversity and Inclusion by retaining our Platinum ranking from Opportunity Now (gender) for the second year; increasing our ranking from Silver to Gold for Race for Opportunity (race); retaining a position in the Times Top 50 Employers for Women for the eighth consecutive year; and improving upon our ranking in the Stonewall Workplace Equality Index (LGBT).

Wellbeing

Ensuring and supporting the wellbeing of our people is an important responsibility for RBS Group. A wide range of health benefits and services is in place to help them maintain good physical and psychological health, and support them if they do become unwell, including Lifematters, RBS Group's Employee Assistance Programme. We continue to enhance and promote these services, targeting those issues that we know affect our people's ability to bring the best of themselves to work. In 2014, Lifematters Online activity improved significantly through promotion via road shows, wellbeing fairs, and internal communications; and the popularity of the Lifematters App, which was launched in late 2013, continued to grow. In 2014 RBS Group also signed up to Time to Change: the UK's biggest programme to challenge mental health stigma.

Corporate governance

The Dutch Banking Code (Code Banken)

Introduction

The Code Banken was drawn up by the Netherlands Bankers' Association (NVB) in response to the report entitled 'Restoring Trust' (Naar herstel van vertrouwen), which was published by the Advisory Committee on the Future of Banks (Adviescommissie Toekomst Banken) on 7 April 2009. The recommendations of the Advisory Committee's report have been used as the basis for this Code Banken. The Code Banken is mandatory for RBS N.V. as stated in Book 2 of the Civil Code as from 1 January 2010. An updated version of the Code Banken came into force on the 1 of January 2015.

The Code Banken offers specific provisions, but underlying these provisions, its aim is to instil learning in the banking sector following the financial crisis. Drawing lessons and implementing change with the aim to restore trust among all our stakeholders, clients, staff, investors and society at large. RBS Group, including RBS N.V. has undergone and continues to undergo profound change following the crisis and is committed to high standards of corporate governance, business integrity and professionalism in all its activities.

A review is ongoing of the new Code Banken to determine if there are additional steps to be taken, which is expected not to be the case. This will be reported in the 2015 Annual Report.

Corporate Governance codes and the global footprint of RBS Group

RBS N.V. is ultimately owned by RBS Group. When implementing the Code Banken, the Managing Board and Supervisory Board of RBS N.V. will take into account the effects of similar codes of conduct implemented in the RBS Group with the aim to align all businesses with RBS Group.

Clients First

RBS N.V. is aware of the fact that its long term success fully depends on how successful RBS N.V. is in servicing its clients. To that extent, RBS N.V. has taken additional measures to further embed 'a client led culture' in the organisation. Over the past few years certain themes in this area have been fleshed out in detail, resulting in the 'Customer Charter' and the 'Treating Customers Fairly Policy'. The Customer Charter describes 14 'customer commitments' divided into the following four categories:

- Make banking easy
- Help when you need us
- Support the communities in which we work
- Listen to you

More information about the Customer Charter can be found on the website: www.rbs.com.

In the Netherlands, RBS N.V. primarily serves wholesale customers. The products and services which RBS N.V. provides to these customers have been tailored accordingly and the mentioned Treating Customers Fairly Policy is applicable, where appropriate. With respect to the products and services have been offered to retail investors, we use methods including market research to gauge the requirements and opinions of (potential) customers. And as described on page 30 of this report, RBS N.V. fully takes into account the yes-check to determine the suitability of a product being offered to clients.

Compliance with the Code Banken

RBS N.V. considers the Code Banken as an important yardstick for the way banks draw lessons from the crisis. RBS N.V. takes account of all relevant remuneration regulatory regimes, including the Code Banken in designing and implementing its remuneration policy as well as RBS N.V.'s corporate governance structure.

Supervisory Board

The required expertise and experience are well embedded in the Supervisory Board providing for an independent board with a diverse composition. The board consists of executives of RBS Group with broad banking experience. A clearly defined process for the engagement and recruitment of a Supervisory Board member has been established. If a vacancy for a new member exists, a new member is sought based on an established Supervisory Board profile to ensure that the knowledge and expertise obtained when filling the vacancy is fully complementing the composition of the board.

If the position of Chairman of the Supervisory Board became vacant, a separate individual profile would be drawn up based on an established Chairman's profile to ensure alignment with the specific socio-economic and political culture and the social environment of the bank's main markets.

All Supervisory Board members have committed themselves to fulfil their responsibilities as board members to the best of their ability. Their attendance at meetings is recorded. The board furthermore operates according to a set of rules governing the Supervisory Board's principles and best practices. These have been agreed by all board members and are published on the internet site of the bank, www.rbs.nl. The remuneration received as Supervisory Board members is not dependent on RBS N.V.'s results.

A programme covering aspects as stated in the Code Banken is ongoing to accommodate for life long learning of Supervisory Board members and such programme is assessed on an annual basis.

Furthermore the functioning of the Supervisory Board, including its life long learning programme, has been assessed by an independent party. Their conclusion was that the Supervisory Board members discharge their roles and responsibilities in a satisfying way. The independent assessment is in accordance with the Code Banken which requires such independent assessment at least once every three years. As a result, the next assessment will take place in 2015.

In line with the requirement of the Code Banken, Supervisory Board members sign a moral and ethical declaration. Each board member of RBS Holdings has signed such declaration.

Managing Board

The composition of the Managing Board of RBS N.V. ensures that all business areas and all control and support functions are well represented in the board. The board comprises a Chairman, also responsible for Corporate & Institutional Banking, a Chief Risk Officer (CRO), a Chief Financial Officer (CFO) and a Chief Administrative Officer (CAO). To further clarify the specifics of each role on the board and to ensure adherence to agreements made on procedure and governance, a set of rules governing the Managing Board's principles and best practices has been agreed.

Corporate governance

The Dutch Banking Code (Code Banken) continued

A programme covering aspects as stated in the Code Banken is ongoing to accommodate for life long learning of Managing Board members and such programme has been assessed on an annual basis.

The Managing Board will continuously ensure a prudent risk appetite, based on the risk appetite framework approved by the Supervisory Board. The Risk appetite framework shall be approved by the Supervisory Board at least once a year and is actively monitored during the year. Any material changes in the interim shall also require the Supervisory Board's approval. The Managing Board takes the interests of all stakeholders (e.g. employees, clients, shareholders) into account in their decision making. The Managing Board recognises that duty of care for clients is an important component in doing business.

In line with the requirement of the Code Banken, Managing Board members sign a moral and ethical declaration. Each Board member of RBS Holdings has signed such declaration.

The principles in the moral and ethical declaration are incorporated into the RBS Group's code of conduct which is issued to all new employees joining RBS N.V..

Risk Management

The Managing Board has arranged Risk Management in an adequate manner in order to ensure the Managing Board is aware in good time of any material risks run by the bank and to enable the Managing Board to manage these risks properly. The Chief Risk Officer of RBS Holdings is a member of the Managing Board.

The Managing Board, through its sub committees, the Risk & Control Committee (RCC) and the Asset & Liability Management Committee (ALCo) takes any decision that is of material significance to the risk profile, the capital position or the liquidity impact.

Since the 4th quarter of 2013, the former operations of the Risk & Audit Committee have been integrated into the Supervisory Board. Specific provisions have been included in the Rules for the Supervisory Board.

Audit

RBS N.V. has a New Product Approval Process in place to ensure that all products are launched only after careful consideration of the risks and any other relevant factor applicable to such product. Internal Audit checks RBS N.V. New Product Approval Process on design and effectiveness at least once per annum and reports its findings to both the Managing Board and Supervisory Board.

To ensure the function's independence, the Head of RBS Holdings Internal Audit reports into the Chairman of the Managing Board and the Chairman of the Supervisory Board. RBS Holdings Internal Audit also reports its opinion and findings on the quality of the control framework, the system of governance and the risk management of the bank to the Supervisory Board on a bi-annual basis and provides the Supervisory Board with their audit review in the remaining quarters of the year. RBS Holdings Internal Audit furthermore presents their annual audit plan to the Supervisory Board. The Managing Board shall ensure that a systemic audit is conducted of the risks managed in relation to the business activities of the bank.

The external auditors are invited to share their findings and opinion concerning the quality and effectiveness of the system of governance, risk management and the banks' control procedures with the Supervisory Board on a quarterly basis. The external auditors present the annual audit plan to the Supervisory Board and both RBS Holdings Internal Audit and the external auditors take part in a tri-partite meeting with DNB (from November 2014, ECB as the lead regulator also partake in the meeting) to share their audit plans, analysis and findings at least once per annum. There is a clear escalation process by which the external auditors can raise, with management, any significant concerns.

Remuneration Policy

The remuneration policy for RBS Group, which is also applicable to RBS N.V. supports the RBS Group's business strategy and is designed to:

- attract, retain, motivate and reward high calibre employees to deliver superior long-term business performance; and
- ensure that RBS N.V.'s metrics, reward structures and governance processes as a whole provide coverage of the key risks in an appropriate way.

The Supervisory Board is responsible for the implementation and evaluation of the remuneration policy adopted.

All members of the Managing Board are remunerated through RBS plc. The full year remuneration of the Managing Board members in office as at 31 December 2014 continues to comply with the Code Banken.

RBS Group has had claw back provisions in place since 2009. This allows the Remuneration Committee to retrospectively limit any compensation at the time of vesting if it considers that the performance factors on which reward decisions were based have later turned out not to reflect the corresponding performance in the longer term.

The intention is to allow RBS Group to adjust historic remuneration for unforeseen issues arising during the deferral period, particularly those that do not easily lend themselves to quantitative measurement. Further details on the remuneration arrangements for RBS N.V. can be found in note 31 to this Report and Accounts.

Summary Code Banken

All of the principles in the Code Banken are adhered to by RBS N.V., except for one item. The Code Banken has a 'comply' or 'explain' requirement. If a bank is (partially) not compliant, the bank will have to explain the reason for non-compliance in its Annual Report. Sanctions or penalties are not part of the Code Banken. Compliance with the Code Banken is monitored annually by an independent monitoring committee, appointed by the NVB in close consultation with the Minister of Finance. There is no penalty, financial or otherwise, associated with RBS N.V.'s non-compliance with the principles.

Under the Code Banken, there is the requirement for shares granted to Managing Board members without financial consideration to be retained for at least five years or to the end of employment, whichever is sooner. RBS N.V. is part of RBS Group and therefore adheres to the global RBS Group remuneration framework and policy which is compliant with UK regulatory requirements and the Capital Requirements Directive III and IV as implemented in both the UK and the Netherlands.

Corporate governance

Under the RBS Group-wide deferral arrangements, a significant proportion of annual bonus awards for employees deemed to be Material Risk Takers (MRTs) under regulatory requirements are deferred over a minimum three year period. RBS Group also provides long-term incentives which are designed to link reward with the long-term success of RBS N.V. and recognise the responsibility participants have in driving its future success and delivering value for shareholders. Long-term incentive awards are structured as performance-vesting shares, with performance measured over three years and vesting taking place in equal tranches in years four and five.

In line with the requirements of the UK Prudential Regulation Authority and Financial Conduct Authority Remuneration Code, variable pay awards made to MRTs are subject to malus and clawback provisions and an appropriate retention period will also apply post vesting.

Under the RBS Group-wide deferral arrangements a significant proportion of annual incentive awards for the more senior employees are deferred over a three year period. In line with the requirements of the PRA remuneration Code, a proportion of deferred remuneration is subject to an appropriate retention period.

RBS Group also provides long-term incentives which are designed to link reward with the long-term success of RBS N.V. and recognise the responsibility participants have in driving its future success and delivering value for shareholders. Long-term incentive awards are structured as performance-vesting shares. For the most senior roles, vesting will be based partly on divisional or functional performance and partly on performance across RBS Group.

For details of remuneration of the Managing Board and Supervisory Board see Note 31 to the Financial Statements.

Corporate governance

Management's report on internal control over financial reporting under the Dutch Corporate Governance Code

Although RBS N.V. is not obliged to adhere to the Corporate Governance Declaration for the purposes of Corporate Governance Degree (Besluit Corporate Governance) RBS N.V.'s Managing Board has decided nevertheless to adhere to the best practice provision II.1.5 of the Dutch Corporate Governance Code and to substantiate the operation of the internal risk management and control system during the year under review, and to state its adequacy and effectiveness.

RBS N.V.'s internal risk management and control system is a process, effected by the Managing Board, management, and other personnel, which is designed to provide reasonable assurance regarding the achievement of objectives in the following categories: (i) effectiveness and efficiency of operations; (ii) reliability of financial reporting; and (iii) compliance with laws and regulations.

Different sections of this Annual Report 2014, including capital and risk management on pages 22 to 76, elaborate on RBS N.V.'s identified risks, such as liquidity risk, credit risk, market risk, operational risk, reputational and regulatory risk and other risks.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. In addition, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with policies or procedures may deteriorate.

Based on its assessment, management has concluded that, as of 31 December 2014, RBS N.V. internal control over financial reporting is effective.

Managing Board
Amsterdam, 30 April 2015

Management's report on the Annual Report 2014 for purposes of Section 5:25 sub 2 Financial Supervision Act

The Managing Board certifies that, to the best of their knowledge:

- the financial statements give a true and fair view, in all material respects, of the assets, liabilities, financial position and loss of RBS N.V. and its consolidated entities; and
- the Annual Report gives a true and fair view, in all material respects, of RBS N.V. and its consolidated entities as at 31 December 2014 and their state of affairs during 2014; and the Annual Report describes the material risks that RBS N.V. is facing.

Managing Board

Amsterdam, 30 April 2015

Notes:

- (1) Capital injection from RFS Holdings BV reflecting amounts received by RFS Holdings BV from Santander (€72 million) and NL Financial Investments (€67 million).
(2) Includes distribution of €103 million to RFS Holdings BV to fund the repayment of its loan from ABN AMRO Bank and a dividend of €300 million.
(3) Includes €13 million relating to gains recycled to profit and loss due to transfers to RBS plc during 2014 (2013 - €20 million; 2012 - €174 million).

The accompanying notes on pages 100 to 145, the accounting policies on pages 91 to 99 and the audited sections of the Financial review: Capital and risk management on pages 23 to 72 form an integral part of these financial statements.

Consolidated cash flow statement for the year ended 31 December 2014

	Note	2014 €m	2013 €m	2012 €m
Operating activities				
Operating loss before tax from continuing operations		(57)	(142)	(887)
Profit before tax from discontinued operations		27	31	28
Adjustments for:				
Interest on subordinated liabilities		182	203	232
Elimination of foreign exchange differences		242	56	(30)
Impairment losses on debt securities		58	34	48
Other non-cash items		611	267	(1,343)
Net cash inflow/(outflow) from operating activities		1,063	449	(1,952)
Changes in operating assets and liabilities	27	(15,467)	(8,273)	(15,176)
Net cash flows from operating activities before tax		(14,404)	(7,824)	(17,128)
Income taxes received/(paid)		42	(35)	(196)
Net cash flows from operating activities		(14,362)	(7,859)	(17,324)
Investing activities				
Sale and maturity of securities		12,583	8,896	12,946
Purchase of securities		(410)	(305)	(2,360)
Disposal of subsidiaries/businesses (1)		255	(3,362)	(10,188)
Other (divestment)/investment		54	37	256
Net cash flows from investing activities		12,482	5,266	654
Financing activities				
Capital injection		139	—	—
Repayment of subordinated liabilities		(445)	(1,907)	(85)
Distribution		(403)	—	—
Interest on subordinated liabilities		(184)	(212)	(240)
Other		—	—	(21)
Net cash flows from financing activities		(893)	(2,119)	(346)
Effects of exchange rate changes on cash and cash equivalents		127	40	2
Net decrease in cash and cash equivalents		(2,646)	(4,672)	(17,014)
Cash and cash equivalents at 1 January		5,358	10,030	27,044
Cash and cash equivalents at 31 December	29	2,712	5,358	10,030

Note:

(1) 2012 and 2013 relates to the transfer of subsidiaries and businesses to RBSG and RBS plc during the year.

The accompanying notes on pages 100 to 145, the accounting policies on pages 91 to 99 and the audited sections of the Financial review: Capital and risk management on pages 23 to 72 form an integral part of these financial statements.

Accounting policies

1. Corporate information

RBS N.V. (the company) is a public limited liability company, incorporated under Dutch law on 7 February 1825 and registered at Gustav Mahlerlaan 350, 1082 ME Amsterdam, the Netherlands. RBS N.V. offers a wide range of banking products and financial services principally in Europe and Asia.

The company is wholly owned by RBS Holdings N.V. which in turn is wholly owned by RFS Holdings B.V., itself 97.7% owned by The Royal Bank of Scotland Group plc (RBSG). RBSG is incorporated in the UK and registered at 36 St. Andrew Square, Edinburgh, Scotland. RBS Group is the ultimate parent company of RBS Holdings N.V. and RBS N.V.. The consolidated financial statements of RBS N.V. are included in the consolidated financial statements of RBS Group.

The consolidated financial statements of RBS N.V. for the year ended 31 December 2014 incorporate financial information of the company, its controlled entities and interests in associates and joint ventures. The consolidated financial statements were signed and authorised for issue by the Managing Board on 30 April 2015 and by the Supervisory Board on 30 April 2015. The right to request an amendment of the financial statements is embedded in the Netherlands Civil Code. Interested parties have the right to ask the Enterprise Chamber of the Amsterdam Court of Appeal for an amendment of the financial statements.

2. Presentation of accounts

The Managing Board, having made such enquiries as they considered appropriate, including a review of RBS N.V.'s forecasts, projections and other relevant evidence regarding the continuing availability of sufficient resources from the RBS Group, have prepared the financial statements on a going concern basis.

As announced on 19 April 2011, RBS Group is committed to providing the necessary support to ensure that RBS N.V. continues to meet its commitments.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and interpretations as issued by the IFRS Interpretations Committee (IFRIC) of the IASB and IFRS as adopted by the European Union (EU) (together IFRS). The EU has not adopted the complete text of IAS 39 'Financial Instruments: Recognition and Measurement', it has relaxed some of the standard's hedging requirements.

RBS N.V. has not taken advantage of this relaxation and has adopted IAS 39 as issued by the IASB. RBS N.V.'s financial statements are prepared in accordance with IFRS as issued by the IASB.

RBS N.V. adopted a number of new and revised IFRSs effective 1 January 2014:

'Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32)' adds application guidance to IAS 32 to address inconsistencies identified in the application of the standard's criteria for offsetting financial assets and financial liabilities.

'Investment Entities (amendments to IFRS 10, IFRS 12 and IAS 27)' applies to investment entities; such entities should account for their subsidiaries (other than those that provide services related to the entity's investment activities) at fair value through profit or loss.

IFRIC 21 'Levies' provides guidance on accounting for levies payable to public authorities prohibiting recognition of a liability before the trigger point is met.

IAS 36 'Recoverable Amount Disclosures for Non-Financial Assets (Amendments to IAS 36)' aligns the recoverable amount disclosure requirements in IAS 36 with IASB's original intentions.

IAS 39 'Novation of Derivatives and Continuation of Hedge Accounting (Amendments to IAS 39)' provides relief from discontinuing hedge accounting on novation of a derivative designated as a hedging instrument.

The implementation of these requirements has not had a material effect on RBS N.V.'s accounts.

The accounts are prepared on a historical cost basis of measurement except for certain financial instruments that are measured at fair value as described in Accounting Policies 11, 13 and 15. The company's financial statements and RBS N.V.'s consolidated financial statements are presented in euro which is the functional currency of the company.

3. Basis of consolidation

The consolidated financial statements incorporate the financial statements of the company and entities (including certain structured entities) that are controlled by RBS N.V. RBS N.V. controls another entity (a subsidiary) when it is exposed, or has rights, to variable returns from its involvement with that entity and has the ability to affect those returns through its power over the other entity; power generally arises from holding a majority of voting rights. On acquisition of a subsidiary, its identifiable assets, liabilities and contingent liabilities are included in the consolidated accounts at their fair value. A subsidiary is included in the consolidated financial statements from the date it is controlled by RBS N.V. until the date RBS N.V. ceases to control it through a sale or a significant change in circumstances. Changes in RBS N.V.'s interest in a subsidiary that do not result in RBS N.V. ceasing to control that subsidiary are accounted for as equity transactions.

All intergroup balances, transactions, income and expenses are eliminated on consolidation. The consolidated accounts are prepared under uniform accounting policies.

Accounting policies

4. Revenue recognition

Interest income on financial assets that are classified as loans and receivables, available-for-sale or held-to-maturity and interest expense on financial liabilities other than those measured at fair value are determined using the effective interest method. The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Financial assets and financial liabilities held-for-trading or designated as at fair value through profit or loss are recorded at fair value. Changes in fair value are recognised in profit or loss.

Commitment and utilisation fees are determined as a percentage of the outstanding facility. If it is unlikely that a specific lending arrangement will be entered into, such fees are taken to profit or loss over the life of the facility otherwise they are deferred and included in the effective interest rate on the advance.

Fees in respect of services are recognised as the right to consideration accrues through the provision of the service to the customer. The arrangements are generally contractual and the cost of providing the service is incurred as the service is rendered. The price is usually fixed and always determinable. The application of this policy to a significant fee type is outlined below.

Investment management fees - fees charged for managing investments are recognised as revenue as the services are provided. Incremental costs that are directly attributable to securing an investment management contract are deferred and charged as expense as the related revenue is recognised.

5. Assets held for sale and discontinued operations

A non-current asset (or disposal group) is classified as held for sale if RBS N.V. will recover its carrying amount principally through a sale transaction rather than through continuing use. A non-current asset (or disposal group) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. If the asset (or disposal group) is acquired as part of a business combination, it is initially measured at fair value less costs to sell. Assets and liabilities of disposal groups classified as held for sale and non-current assets classified as held for sale are shown separately on the face of the balance sheet.

The results of discontinued operations – comprising the post-tax profit or loss of discontinued operations and the post-tax gain or loss recognised either on measurement to fair value less costs to sell or on the disposal of the discontinued operation are shown as a single amount on the face of the income statement.

6. Pensions

RBS N.V. provides post-retirement benefits in the form of pensions to eligible employees under defined contribution plans.

Contributions to defined contribution pension schemes are recognised in profit or loss when payable.

For defined benefit schemes, the defined benefit obligation is measured on an actuarial basis using the projected unit credit method and discounted at a rate determined by reference to market yields at the end of the reporting period on high quality corporate bonds of equivalent term and currency to the scheme liabilities. Scheme assets are measured at their fair value. The difference between scheme assets and scheme liabilities – the net defined benefit asset or liability - is recognised in the balance sheet. A defined benefit asset is limited to the present value of any economic benefits available to RBS N.V. in the form of refunds from the plan or reduced contributions to it.

The charge to profit or loss for pension costs (recorded in operating expenses) comprises:

- the current service cost.
- interest, computed at the rate used to discount scheme liabilities, on the net defined benefit liability or asset.
- past service cost resulting from a scheme amendment or curtailment.
- gains or losses on settlement.

A curtailment occurs when RBS N.V. significantly reduces the number of employees covered by a plan. A plan amendment occurs when RBS N.V. introduces, or withdraws, a defined benefit plan or changes the benefits payable under an existing defined benefit plan. Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when benefits are withdrawn or changed so that the present value of the defined benefit obligation decreases). A settlement is a transaction that eliminates all further obligation for part or all of the benefits.

Actuarial gains and losses (i.e. gains or/and losses on re-measuring of the net defined benefit asset or liability) are recognised in full in the period in which they arise in other comprehensive income.

7. Foreign currencies

RBS N.V. entities record transactions in foreign currencies in their functional currency - the currency of the primary economic environment in which they operate at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the relevant functional currency at the foreign exchange rates ruling at the balance sheet date. Foreign exchange differences arising on the settlement of foreign currency transactions and from the translation of monetary assets and liabilities are reported in income from trading activities except for differences arising on cash flow hedges and hedges of net investments in foreign operations (see Accounting policy 20).

Accounting policies

Non-monetary items denominated in foreign currencies that are stated at fair value are translated into the relevant functional currency at the foreign exchange rates ruling at the dates the values are determined. Translation differences arising on non-monetary items measured at fair value are recognised in profit or loss except for differences arising on available-for-sale non-monetary financial assets, for example equity shares, which are recognised in other comprehensive income unless the asset is the hedged item in a fair value hedge.

Assets and liabilities of foreign operations are translated into euro at foreign exchange rates ruling at the balance sheet date. Income and expenses of foreign operations are translated into euro at average exchange rates unless these do not approximate to the foreign exchange rates ruling at the dates of the transactions. Foreign exchange differences arising on the translation of a foreign operation are recognised in other comprehensive income. The amount accumulated in equity is reclassified from equity to profit or loss on disposal or partial disposal of a foreign operation.

8. Leases

As lessor

Contracts with customers to lease assets are classified as finance leases if they transfer substantially all the risks and rewards of ownership of the asset to the customer; all other contracts with customers to lease assets are classified as operating leases.

Rental income from operating leases is recognised in income on a straight-line basis over the lease term unless another systematic basis better represents the time pattern of the asset's use. Operating lease assets are included within Property, plant and equipment and depreciated over their useful lives. Operating lease rentals receivable are included in Other operating income.

As lessee

RBS N.V.'s contracts to lease assets are principally operating leases. Operating lease rental expense is included in Premises and equipment costs and recognised as an expense on a straight-line basis over the lease term unless another systematic basis better represents the benefit to RBS N.V..

9. Provisions

RBS N.V. recognises a provision for a present obligation resulting from a past event when it is more likely than not that it will be required to transfer economic benefits to settle the obligation and the amount of the obligation can be estimated reliably.

Provision is made for restructuring costs, including the costs of redundancy, when RBS N.V. has a constructive obligation to restructure. An obligation exists when RBS N.V. has a detailed formal plan for the restructuring and has raised a valid expectation in those affected by starting to implement the plan or announcing its main features.

If RBS N.V. has a contract that is onerous, it recognises the present obligation under the contract as a provision. An onerous contract is one where the unavoidable costs of meeting RBS N.V.'s contractual obligations exceed the expected economic benefits. When RBS N.V. vacates a leasehold property, a provision is recognised for the costs under the lease less any expected economic benefits (such as rental income).

Contingent liabilities are possible obligations arising from past events whose existence will be confirmed only by uncertain future events or present obligations arising from past events that are not recognised because either an outflow of economic benefits is not probable or the amount of the obligation cannot be reliably measured. Contingent liabilities are not recognised but information about them is disclosed unless the possibility of any outflow of economic benefits in settlement is remote.

10. Tax

Income tax expense or income, comprising current tax and deferred tax, is recorded in the income statement except income tax on items recognised outside profit or loss which is credited or charged to other comprehensive income or to equity as appropriate.

Current tax is income tax payable or recoverable in respect of the taxable profit or loss for the year arising in income or in equity. Provision is made for current tax at rates enacted or substantively enacted at the balance sheet date.

Deferred tax is the tax expected to be payable or recoverable in respect of temporary differences between the carrying amount of an asset or liability for accounting purposes and its carrying amount for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that they will be recovered.

Deferred tax is not recognised on temporary differences that arise from initial recognition of an asset or a liability in a transaction (other than a business combination) that at the time of the transaction affects neither accounting nor taxable profit or loss. Deferred tax is calculated using tax rates expected to apply in the periods when the assets will be realised or the liabilities settled, based on tax rates and laws enacted, or substantively enacted, at the balance sheet date.

Deferred tax assets and liabilities are offset where RBS N.V. has a legally enforceable right to offset and where they relate to income taxes levied by the same taxation authority either on an individual RBS N.V. company or on RBS N.V. companies in the same tax group that intend, in future periods, to settle current tax liabilities and assets on a net basis or on a gross basis simultaneously.

Accounting policies

11. Financial assets

On initial recognition, financial assets are classified into held-to-maturity investments; held-for-trading; designated as at fair value through profit or loss; loans and receivables; or available-for-sale financial assets. Regular way purchases of financial assets classified as loans and receivables are recognised on settlement date; all other regular way transactions in financial assets are recognised on trade date.

Held-to-maturity investments - a financial asset may be classified as a held-to-maturity investment only if it has fixed or determinable payments, a fixed maturity and RBS N.V. has the positive intention and ability to hold to maturity. Held-to-maturity investments are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Held-for-trading - a financial asset is classified as held-for-trading if it is acquired principally for sale in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial assets are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses on held-for-trading financial assets are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial assets may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both, that RBS N.V. manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract. Financial assets that RBS N.V. designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial assets that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

Loans and receivables - non-derivative financial assets with fixed or determinable repayments that are not quoted in an active market are classified as loans and receivables, except those that are classified as available-for-sale or as held-for-trading, or designated as at fair value through profit or loss. Loans and receivables are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Available-for-sale financial assets - financial assets that are not classified as held-to-maturity, held-for-trading, designated as at fair value through profit or loss, or loans and receivables are classified as available-for-sale.

Financial assets can be designated as available-for-sale on initial recognition. Available-for-sale financial assets are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at fair value. Unquoted equity investments whose fair value cannot be measured reliably are carried at cost and classified as available-for-sale financial assets. Impairment losses and exchange differences resulting from retranslating the amortised cost of foreign currency monetary available-for-sale financial assets are recognised in profit or loss together with interest calculated using the effective interest method (see Accounting policy 4), as are gains and losses attributable to the hedged risk on available-for-sale financial assets that are hedged items in fair value hedges (see Accounting policy 20).

Other changes in the fair value of available-for-sale financial assets and any related tax are reported in other comprehensive income until disposal, when the cumulative gain or loss is reclassified from equity to profit or loss.

Reclassifications - held-for-trading and available-for-sale financial assets that meet the definition of loans and receivables (non-derivative financial assets with fixed or determinable payments that are not quoted in an active market) may be reclassified to loans and receivables if RBS N.V. has the intention and ability to hold the financial asset for the foreseeable future or until maturity. RBS N.V. typically regards the foreseeable future as twelve months from the date of reclassification. Additionally, held-for-trading financial assets that do not meet the definition of loans and receivables may, in rare circumstances, be transferred to available-for-sale financial assets or to held-to-maturity investments. Reclassifications are made at fair value. This fair value becomes the asset's new cost or amortised cost as appropriate. Gains and losses recognised up to the date of reclassification are not reversed.

Fair value for a net open position in a financial asset that is quoted in an active market is the current bid price times the number of units of the instrument held. Fair values for financial assets not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial assets.

12. Impairment of financial assets

RBS N.V. assesses at each balance sheet date whether there is any objective evidence that a financial asset or group of financial assets classified as held-to-maturity, available-for-sale or loans and receivables is impaired. A financial asset or portfolio of financial assets is impaired and an impairment loss incurred if there is objective evidence that an event or events since initial recognition of the asset have adversely affected the amount or timing of future cash flows from the asset.

Accounting policies

Financial assets carried at amortised cost - if there is objective evidence that an impairment loss on a financial asset or group of financial assets classified as loans and receivables or as held-to-maturity investments has incurred, RBS N.V. measures the amount of the loss as the difference between the carrying amount of the asset or group of assets and the present value of estimated future cash flows from the asset or group of assets discounted at the effective interest rate of the instrument at initial recognition. For collateralised loans and receivables, estimated future cash flows include cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable. Where, in the course of the orderly realisation of a loan, it is exchanged for equity shares or property, the exchange is accounted for as the sale of the loan and the acquisition of equity securities or investment property. Where RBS N.V.'s interest in equity shares following the exchange is such that RBS N.V. controls an entity, that entity is consolidated.

Impairment losses are assessed individually for financial assets that are individually significant and individually or collectively for assets that are not individually significant.

Impairment losses are recognised in profit or loss and the carrying amount of the financial asset or group of financial assets reduced by establishing an allowance for impairment losses. If, in a subsequent period, the amount of the impairment loss reduces and the reduction can be ascribed to an event after the impairment was recognised, the previously recognised loss is reversed by adjusting the allowance. Once an impairment loss has been recognised on a financial asset or group of financial assets, interest income is recognised on the carrying amount using the rate of interest at which estimated future cash flows were discounted in measuring impairment.

Impaired loans and receivables are written off, i.e. the impairment provision is applied in writing down the loan's carrying value partially or in full, when RBS N.V. concludes that there is no longer any realistic prospect of recovery of part or all of the loan. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs will be prompted by bankruptcy, insolvency, renegotiation and similar events. RBS N.V. had no collectively assessed portfolios in 2014 (2013 - €9 million; 2012 - €15 million).

Financial assets carried at fair value - when a decline in the fair value of a financial asset classified as available-for-sale has been recognised directly in other comprehensive income and there is objective evidence that it is impaired, the cumulative loss is reclassified from equity to profit or loss. The loss is measured as the difference between the amortised cost of the financial asset and its current fair value. Impairment losses on available-for-sale equity instruments are not reversed through profit or loss, but those on available-for-sale debt instruments are reversed, if there is an increase in fair value that is objectively related to a subsequent event.

13. Financial liabilities

On initial recognition, financial liabilities are classified into held-for-trading; designated as at fair value through profit or loss; or amortised cost. Issues of financial liabilities measured at amortised cost are recognised on settlement date; all other regular way transactions in financial liabilities are recognised on trade date.

Held-for-trading - a financial liability is classified as held-for-trading if it is incurred principally for repurchase in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship).

Held-for-trading financial liabilities are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial liabilities may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both that RBS N.V. manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract.

Financial liabilities that RBS N.V. designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial liabilities that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

Financial liabilities designated as at fair value through profit or loss principally comprise structured liabilities issued by RBS N.V.: designation significantly reduces the measurement inconsistency between these liabilities and the related derivatives carried at fair value.

Amortised cost - all other financial liabilities are measured at amortised cost using the effective interest method (see Accounting policy 4).

Fair value - fair value for a net open position in a financial liability that is quoted in an active market is the current offer price times the number of units of the instrument issued. Fair values for financial liabilities not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial liabilities.

14. Financial guarantee contracts

Under a financial guarantee contract, RBS N.V., in return for a fee, undertakes to meet a customer's obligations under the terms of a debt instrument if the customer fails to do so. A financial guarantee is recognised as a liability; initially at fair value and, if not designated as at fair value through profit or loss, subsequently at the higher of its initial value less cumulative amortisation and any provision under the contract measured in accordance with Accounting policy 9. Amortisation is calculated so as to recognise fees receivable in profit or loss over the period of the guarantee.

Accounting policies

15. Loan commitments

Provision is made for loan commitments, other than those classified as held-for-trading, if it is probable that the facility will be drawn and the resulting loan will be recognised at a value less than the cash advanced. Syndicated loan commitments in excess of the level of lending under the commitment approved for retention by RBS N.V. are classified as held-for-trading and measured at fair value.

16. Derecognition

A financial asset is derecognised when the contractual right to receive cash flows from the asset has expired or when it has been transferred and the transfer qualifies for derecognition. A transfer requires that RBS N.V. either (a) transfers the contractual rights to receive the asset's cash flows; or (b) retains the right to the asset's cash flows but assumes a contractual obligation to pay those cash flows to a third party. After a transfer, RBS N.V. assesses the extent to which it has retained the risks and rewards of ownership of the transferred asset. The asset remains on the balance sheet if substantially all the risks and rewards have been retained. It is derecognised if substantially all the risks and rewards have been transferred. If substantially all the risks and rewards have been neither retained nor transferred, RBS N.V. assesses whether or not it has retained control of the asset. If it has not retained control, the asset is derecognised. Where RBS N.V. has retained control of the asset, it continues to recognise the asset to the extent of its continuing involvement; if RBS N.V. has not retained control of the asset, it is derecognised.

A financial liability is removed from the balance sheet when the obligation is discharged, or cancelled, or expires. On the redemption or settlement of debt securities (including subordinated liabilities) issued by RBS N.V., RBS N.V. derecognises the debt instrument and records a gain or loss being the difference between the debt's carrying amount and the cost of redemption or settlement. The same treatment applies where the debt is exchanged for a new debt issue that has terms substantially different from those of the existing debt. The assessment of whether the terms of the new debt instrument are substantially different takes into account qualitative and quantitative characteristics including a comparison of the present value of the cash flows under the new terms with present value of the remaining cash flows of the original debt issue discounted at the effective interest rate of the original debt issue.

17. Sale and repurchase transactions

Securities subject to a sale and repurchase agreement under which substantially all the risks and rewards of ownership are retained by RBS N.V. continue to be shown on the balance sheet and the sale proceeds recorded as a financial liability.

Securities acquired in a reverse sale and repurchase transaction under which RBS N.V. is not exposed to substantially all the risks and rewards of ownership are not recognised on the balance sheet and the consideration paid is recorded as a financial asset.

Securities borrowing and lending transactions are usually secured by cash or securities advanced by the borrower. Borrowed securities are not recognised on the balance sheet or lent securities derecognised. Cash collateral given or received is treated as a loan or deposit; collateral in the form of securities is not recognised. However, where securities borrowed are transferred to third parties, a liability for the obligation to return the securities to the stock lending counterparty is recorded.

18. Netting

Financial assets and financial liabilities are offset and the net amount presented in the balance sheet when, and only when, RBS N.V. currently has a legally enforceable right to set off the recognised amounts and it intends either to settle on a net basis or to realise the asset and settle the liability simultaneously. RBS N.V. is party to a number of arrangements, including master netting agreements, that give it the right to offset financial assets and financial liabilities but where it does not intend to settle the amounts net or simultaneously and therefore the assets and liabilities concerned are presented gross.

19. Capital instruments

RBS N.V. classifies a financial instrument that it issues as a liability if it is a contractual obligation to deliver cash or another financial asset, or to exchange financial assets or financial liabilities on potentially unfavourable terms and as equity if it evidences a residual interest in the assets of RBS N.V. after the deduction of liabilities. The components of a compound financial instrument issued by RBS N.V. are classified and accounted for separately as financial assets, financial liabilities or equity as appropriate.

Incremental costs and related tax that are directly attributable to an equity transaction are deducted from equity. The consideration for any ordinary shares of the company purchased by RBS N.V. (treasury shares) is deducted from equity. On the cancellation of treasury shares their nominal value is removed from equity and any excess of consideration over nominal value is added to shareholders' equity. On the sale or reissue of treasury shares the consideration received is credited to equity, net of any directly attributable incremental costs and related tax.

20. Derivatives and hedging

Derivative financial instruments are initially recognised, and subsequently measured, at fair value. RBS N.V.'s approach to determining the fair value of financial instruments is set out in the section of Critical accounting policies and key sources of estimation uncertainty entitled Fair value - financial instruments.

A derivative embedded in a contract is accounted for as a stand-alone derivative if its economic characteristics are not closely related to the economic characteristics of the host contract; unless the entire contract is measured at fair value with changes in fair value recognised in profit or loss. Gains and losses arising from changes in the fair value of derivatives that are not the hedging instrument in a qualifying hedge are recognised as they arise in profit or loss. Gains and losses are recorded in Income from trading activities except for gains and losses on those derivatives that are managed together with financial instruments designated at fair value; these gains and losses are included in Other operating income.

RBS N.V. enters into three types of hedge relationship: hedges of changes in the fair value of a recognised asset or liability or firm commitment (fair value hedges); hedges of the variability in cash flows from a recognised asset or liability or a highly probable forecast transaction (cash flow hedges); and hedges of the net investment in a foreign operation.

Accounting policies

Hedge relationships are formally designated and documented at inception. The documentation identifies the hedged item and the hedging instrument and details the risk that is being hedged and the way in which effectiveness will be assessed at inception and during the period of the hedge. If the hedge is not highly effective in offsetting changes in fair values or cash flows attributable to the hedged risk, consistent with the documented risk management strategy, hedge accounting is discontinued. Hedge accounting is also discontinued if RBS N.V. revokes the designation of a hedge relationship.

Fair value hedge - in a fair value hedge, the gain or loss on the hedging instrument is recognised in profit or loss. The gain or loss on the hedged item attributable to the hedged risk is recognised in profit or loss and, where the hedged item is measured at amortised cost, adjusts the carrying amount of the hedged item. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; or if the hedging instrument expires or is sold, terminated or exercised; or if hedge designation is revoked. If the hedged item is one for which the effective interest rate method is used, any cumulative adjustment is amortised to profit or loss over the life of the hedged item using a recalculated effective interest rate.

Cash flow hedge - in a cash flow hedge, the effective portion of the gain or loss on the hedging instrument is recognised in other comprehensive income and the ineffective portion in profit or loss. When the forecast transaction results in the recognition of a financial asset or financial liability, the cumulative gain or loss is reclassified from equity to profit or loss in the same periods in which the hedged forecast cash flows affect profit or loss. Otherwise the cumulative gain or loss is removed from equity and recognised in profit or loss at the same time as the hedged transaction. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; if the hedging instrument expires or is sold, terminated or exercised; if the forecast transaction is no longer expected to occur; or if hedge designation is revoked. On the discontinuance of hedge accounting (except where a forecast transaction is no longer expected to occur), the cumulative unrealised gain or loss is reclassified from equity to profit or loss when the hedged cash flows occur or, if the forecast transaction results in the recognition of a financial asset or financial liability, when the hedged forecast cash flows affect profit or loss. Where a forecast transaction is no longer expected to occur, the cumulative unrealised gain or loss is reclassified from equity to profit or loss immediately.

Hedge of net investment in a foreign operation - in the hedge of a net investment in a foreign operation, the portion of foreign exchange differences arising on the hedging instrument determined to be an effective hedge is recognised in other comprehensive income. Any ineffective portion is recognised in profit or loss. Non-derivative financial liabilities as well as derivatives may be the hedging instrument in a net investment hedge. On disposal or partial disposal of a foreign operation, the amount accumulated in equity is reclassified from equity to profit or loss.

21. Associates and joint ventures

An associate is an entity over which the RBS N.V. has significant influence. A joint venture is one which it controls jointly with other parties. Investments in associates and interests in joint ventures are recognised using the equity method.

They are stated initially at cost, including attributable goodwill, and subsequently adjusted for post-acquisition changes in RBS N.V.'s share of net assets.

22. Cash and cash equivalents

In the cash flow statement, cash and cash equivalents comprises cash and demand deposits with banks together with short-term highly liquid investments that are readily convertible to known amounts of cash and subject to insignificant risk of change in value.

Critical accounting policies and key sources of estimation uncertainty

The reported results of RBS N.V. are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. Dutch company law and IFRS require the management, in preparing RBS N.V.'s financial statements, to select suitable accounting policies, apply them consistently and make judgements and estimates that are reasonable and prudent. In the absence of an applicable standard or interpretation, IAS 8 'Accounting Policies, Changes in Accounting Estimates and Errors', requires management to develop and apply an accounting policy that results in relevant and reliable information in the light of the requirements and guidance in IFRS dealing with similar and related issues and the IASB's 'Framework for the Preparation and Presentation of Financial Statements'. The judgements and assumptions involved in RBS N.V.'s accounting policies that are considered by management to be the most important to the portrayal of its financial condition are discussed below. The use of estimates, assumptions or models that differ from those adopted by RBS N.V. would affect its reported results.

Provisions for liabilities

Provisions are liabilities of uncertain timing or amount, and are recognised when there is a present obligation as a result of a past event, the outflow of economic benefit is probable and the outflow can be estimated reliably. Judgement is involved in determining whether an obligation exists, and in estimating the probability, timing and amount of any outflows. Professional expert advice is taken on litigation provisions, taxation provisions, property provisions including onerous contracts and similar liabilities. Where RBS N.V. can look to another party such as an insurer to pay some or all of the expenditure required to settle a provision, any reimbursement is recognised when, and only when, it is virtually certain that it will be received.

Provisions for litigation - RBS N.V. is party to legal proceedings in the Netherlands, the United States and other jurisdictions, arising out of their normal business operations. The measurement and recognition of liabilities in respect of litigation involves a high degree of management judgement. Before the existence of a present obligation as a result of a past event a liability can be confirmed, numerous facts may need to be established, involving extensive and time-consuming discovery, and novel or unsettled legal questions addressed. Once it is determined there is an obligation, assessing the probability of economic outflows and estimating the amount of any liability can be very difficult. In many proceedings, it is not possible to determine whether any loss is probable or to estimate the amount of any loss. Furthermore, for an individual matter, there can be a wide range of possible outcomes and often it is not practicable to quantify a range of such outcomes.

Accounting policies

RBS N.V.'s outstanding litigation is periodically assessed in consultation with external professional advisers, where appropriate, to determine the likelihood of RBS N.V. incurring a liability. A detailed description of RBS N.V.'s material legal proceedings and a discussion of the nature of the associated uncertainties are given in Note 26.

Loan impairment provisions

RBS N.V.'s loan impairment provisions are established to recognise incurred impairment losses in its portfolio of loans classified as loans and receivables and carried at amortised cost. A loan is impaired when there is objective evidence that events since the loan was granted have affected expected cash flows from the loan.

Such objective evidence, indicative that a borrower's financial condition has deteriorated can include:

- for loans that are individually assessed, the non-payment of interest or principal; debt renegotiation; probable bankruptcy or liquidation; significant reduction in the value of any security; breach of limits or covenants; and deteriorating trading performance and
- for collectively assessed portfolios: the borrowers' payment status and observable data about relevant macroeconomic measures.

The impairment loss is the difference between the carrying value of the loan and the present value of estimated future cash flows at the loan's original effective interest rate.

At 31 December 2014, loans and advances to customers classified as loans and receivables totalled €3,272 million (2013 - €3,406 million; 2012 - €5,932 million) and customer loan impairment provisions amounted to €114 million (2012 - €194 million; 2012 - €341 million).

There are two components to RBS N.V.'s loan impairment provisions: individual and latent.

Individual component - all impaired loans that exceed specific thresholds are individually assessed for impairment. Individually assessed loans principally comprise RBS N.V.'s portfolio of commercial loans to medium and large businesses. Impairment losses are recognised as the difference between the carrying value of the loan and the discounted value of management's best estimate of future cash repayments and proceeds from any security held. These estimates take into account the customer's debt capacity and financial flexibility; the level and quality of its earnings; the amount and sources of cash flows; the industry in which the counterparty operates; and the realisable value of any security held.

Estimating the quantum and timing of future recoveries involves significant judgement. The size of receipts will depend on the future performance of the borrower and the value of security, both of which will be affected by future economic conditions; additionally, collateral may not be readily marketable. The actual amount of future cash flows and the date they are received may differ from these estimates and consequently actual losses incurred may differ from those recognised in these financial statements.

Latent loss component - provisions are held against estimated impairment losses in the performing portfolio that have yet to be identified as at the balance sheet date. To assess the latent loss within its portfolios, RBS N.V. has developed methodologies to estimate the time that an asset can remain impaired within a performing portfolio before it is identified and reported as such.

Fair value – financial instruments

Financial instruments classified as held-for-trading or designated as at fair value through profit or loss and financial assets classified as available-for-sale are recognised in the financial statements at fair value. All derivatives are measured at fair value. Gains or losses arising from changes in the fair value of financial instruments classified as held-for trading or designated as at fair value through profit or loss are included in the income statement. Unrealised gains and losses on available-for sale financial assets are recognised directly in equity unless an impairment loss is recognised.

Financial instruments measured at fair value include:

Loans and advances (held-for-trading and designated as at fair value though profit or loss) - principally comprise reverse repurchase agreements (reverse repos) and cash collateral.

Debt securities (held-for-trading, designated as at fair value though profit or loss and available-for-sale) - debt securities include those issued by governments, municipal bodies, mortgage agencies and financial institutions as well as corporate bonds, debentures and residual interests in securitisations.

Equity securities (held-for-trading, designated as at fair value though profit or loss and available-for-sale) - comprise equity shares of companies or corporations both listed and unlisted.

Deposits by banks and customer accounts (held-for-trading and designated as at fair value though profit or loss) - deposits measured at fair value principally include repurchase agreements (repos), cash collateral and investment contracts issued by RBS N.V.'s life assurance businesses.

Debt securities in issue (held-for-trading and designated as at fair value though profit or loss) - principally comprise medium term notes.

Short positions (held-for-trading) - arise in dealing and market making activities where debt securities and equity shares are sold which RBS N.V. does not currently possess.

Derivatives - these include swaps (currency swaps, interest rate swaps, credit default swaps, total return swaps and equity and equity index swaps), forward foreign exchange contracts, forward rate agreements, futures (currency, interest rate and equity) and options (exchange-traded options on currencies, interest rates and equities and equity indices and OTC currency and equity options, interest rate caps and floors and swaptions).

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Accounting policies

Fair values are determined from quoted prices in active markets for identical financial assets or financial liabilities where these are available. Fair value for a net open position in a financial instrument in an active market is the number of units of the instrument held times the current bid price (for financial assets) or offer price (for financial liabilities). In determining the fair value of derivative financial instruments, gross long and short positions measured at current mid market prices are adjusted by bid-offer reserves calculated on a portfolio basis. Credit valuation adjustments are made when valuing derivative financial assets to incorporate counterparty credit risk. Adjustments are also made when valuing financial liabilities to reflect RBS N.V.'s own credit standing. Where the market for a financial instrument is not active, fair value is established using a valuation technique. These valuation techniques involve a degree of estimation, the extent of which depends on the instrument's complexity and the availability of market-based data.

Accounting developments

International Financial Reporting Standards (IFRS)

A number of IFRSs and amendments to IFRS were in issue at 31 December 2014 that would affect RBS Group from 1 January 2015 or later.

Effective for 2015

IAS 19 'Defined Benefit Plans: Employee Contributions' was issued in November 2013. This amendment distinguishes the accounting for employee contributions that are related to service from that for those that are independent of service.

Annual Improvements to IFRS 2010 - 2012 and 2011 - 2013 cycles were issued in December 2013 making a number of minor amendments to IFRS.

Implementation of these changes is not expected to have a material effect on RBS N.V.'s financial statements.

Effective after 2015

In July 2014 the IASB published IFRS 9 'Financial Instruments'. IFRS 9 replaces the current financial instruments standard IAS 39, setting out new accounting requirements in a number of areas. First, there are revisions to the classification and measurement of financial instruments. There are new restrictions on the ability to account for financial assets at amortised cost and a prohibition on the bifurcation of embedded derivatives from financial assets. Accounting for financial liabilities is largely unchanged except for the treatment of changes in the fair value of liabilities designated as at fair value through profit or loss attributable to own credit risk; these are recognised in other comprehensive income. Secondly, there are amended requirements for hedge accounting designed to align the accounting more closely to the risk management framework and remove or simplify some of the rule-based requirements of IAS 39. The basic mechanics of hedge accounting: fair value, cash flow and net investment hedges are retained. Finally, there is a new approach to credit impairment provisions moving from IAS 39's incurred loss model to an expected loss model. An expected loss model will result in the recognition of credit impairment losses earlier than an incurred loss model. Subject to EU endorsement, IFRS 9 is applicable for periods beginning on or after 1 January 2018.

IFRS 9 makes major and fundamental changes to accounting for financial instruments. RBS N.V. is continuing its assessment of its effect on RBS N.V.'s financial statements.

IFRS 15 'Revenue from Contracts with Customers' was issued in May 2014. It will replace IAS 11 'Construction Contracts', IAS 18 'Revenue' and several Interpretations. Contracts are bundled or unbundled into distinct performance obligations with revenue recognised as the obligations are met. It is effective from 1 January 2017.

'Accounting for Acquisitions of interests in Joint Operations' issued in May 2014 amends IFRS 11 'Joint Arrangements' to clarify that the donor of assets and liabilities to a joint operation should hold its continuing interest in them at the lower of cost and recoverable amount. The effective date is 1 January 2016.

'Clarification of Acceptable Methods of Depreciation and Amortisation' issued in May 2014 amends IAS 16 'Property, Plant and Equipment' and IAS 38 'Intangible Assets' requiring amortisation to be based on the consumption of an asset, introducing a rebuttable presumption that this is not achieved by an amortisation profile aligned to revenue. The effective date is 1 January 2016.

Annual Improvements to IFRS 2012 - 2014 cycle was issued in September 2014 making a number of minor amendments to IFRS. Its effective date is 1 January 2016.

Amendments to IFRS 10 'Consolidated Financial Statements', IFRS 12 'Disclosure of Interests in Other Entities' and IAS 28 'Investments in Associates and Joint Ventures' were issued in September 2014 to clarify the accounting for sales between an investor, its associate or joint ventures, and in December 2014 to clarify the application of the investment entity consolidation exception. The effective date of these amendments is 1 January 2016.

An amendment to IAS 1 'Presentation of Financial Statements' was issued in December 2014 to clarify the application of materiality to financial statements. Its effective date is 1 January 2016.

RBS N.V. is assessing the effects of these new standards.

Notes on the consolidated accounts

1 Net interest income

	2014 €m	2013 €m	2012 €m
Loans and advances to customers	256	339	865
Loans and advances to banks	48	100	207

Non-interest income	86	199	103

Notes:

(1) The analysis of income from trading activities is based on how the business is organised and the underlying risks managed. Income from trading activities comprises gains and losses on financial instruments held-for-trading, both realised and unrealised, interest income and dividends and the related funding costs.

The types of instruments include:

- Foreign exchange: spot foreign exchange contracts, currency swaps and options, emerging markets and related hedges and funding.
- Interest rate: interest rate swaps, forward foreign exchange contracts, forward rate agreements, interest rate options, interest rate futures and related hedges and funding.
- Credit: asset-backed securities, corporate bonds, credit derivatives and related hedges and funding.
- Equities and commodities: equities, equity derivatives and related hedges and funding, commodities, commodity contracts and related hedges and funding.

(2) Measured as the change in fair value from movements in the year in the credit risk premium payable by RBS N.V..

Non-Core	n/a	600	2,600
Total	1,700	2,500	11,300

The average number of persons employed, rounded to the nearest hundred, in the continuing operations of RBS N.V. during the year was 2,200 (2013 - 5,900; 2012 - 14,500).

Notes on the consolidated accounts

4 Pensions

RBS N.V. sponsors a number of pension schemes overseas. These schemes include both defined contribution and defined benefit plans, whose assets are independent of RBS N.V.'s finances. RBS N.V.'s defined benefit schemes generally provide pensions that are based on average or final salary with annual price evaluation of vested rights. In general, employees do not make contributions for basic pensions but may make voluntary contributions to secure additional benefits.

RBS N.V. has no material post-retirement benefit obligations other than pensions.

During 2012, RBS N.V.'s main pension scheme was transferred to RBS plc. The majority of RBS N.V. pension plans are located in India. At 31 December 2012, all of RBS N.V.'s defined benefit plans were included in assets and liabilities of disposal groups. At 31 December 2014 and 2013, these schemes were no longer classified as disposal groups.

Interim valuations of RBS N.V.'s schemes under IAS 19 'Employee Benefits' were prepared to 31 December with the support of independent actuaries, using the following assumptions:

	All schemes		
	2014 %	2013 %	2012 %
Discount rate	7.9	9.4	—
Expected return on plan assets (weighted average)	7.9	9.4	—
Rate of increase in salaries	5.0	4.0	—

	All schemes		
	2014 %	2013 %	2012 %
Government fixed interest bonds	25.4	48.1	—
Corporate and other bonds	74.6	50.1	—
Cash and other assets	—	1.8	—

	All schemes Fair value of plan assets €m	Present value of defined benefit obligations €m	Net pension (surplus)/ deficit €m
Changes in value of net pension (surplus)/deficit			
At 1 January 2013	—	—	—
Transfers from disposal group	13	37	24

Experience gains/(losses) on plan liabilities	—	—	1	1	(46)
Experience gains/(losses) on plan assets	—	—	—	33	6
Actual return/(loss) on pension schemes assets	1	1	—	92	71
Actual return/(loss) on pension schemes assets - %	10.0%	10.0%	—	7.4%	6.2%

The table below sets out the sensitivities of the pension cost for the year and the present value of defined benefit obligations at the balance sheet dates to a change in the principal actuarial assumptions.

	All schemes Increase/(decrease) in obligation for year		
	2014 €m	2013 €m	2012 €m
0.25% increase in the discount rate	(2)	(1)	—
0.25% increase in inflation	—	—	—
0.25% additional rate of increase in pensions in payment	2	1	—
0.25% additional rate of increase in deferred pensions	—	—	—
0.25% additional rate of increase in salaries	—	—	—
Longevity increase of 1 year	1	1	—

Pension risk

RBS N.V. is exposed to risk from its defined benefit pension schemes to the extent that the assets of the schemes do not fully match the timing and amount of the schemes' liabilities. Pensions scheme liabilities vary with changes to long-term interest rates, inflation, pensionable salaries and the longevity of scheme members as well as changes in legislation. Ultimate responsibility for RBS N.V.'s pension scheme is separate from RBS N.V. management. RBS N.V. is exposed to the risk that the market value of the schemes' assets, together with future returns and any additional future contributions could be considered insufficient to meet the liabilities as they fall due. In such circumstances, RBS N.V. could be obliged, or may choose, to make additional contributions to the schemes.

The pension funds in India are the main source of pension risk. The Trustees or Pension Boards of these schemes are solely responsible for the investment of the schemes' assets which are held separately from the assets of RBS N.V..

Notes on the consolidated accounts

5 Auditor's remuneration

Amounts charged to the income statement relating to RBS N.V.'s auditors for statutory audit and other services are set out below. All audit-related and other services are approved by RBS N.V. Supervisory Board and are subject to strict controls to ensure external auditor's independence is unaffected by the provision of other services. The Committee recognises that for certain assignments the auditors are best placed to perform the work economically. For other work RBS N.V. selects the supplier best placed to meet its requirements. RBS N.V.'s auditors are free to tender for such work in competition with other firms where the work is permissible under audit independence rules.

	2014 €m	2013 €m	2012 €m
Fees for the audit of RBS N.V.'s annual accounts	3.5	5.0	8.5
Audit related services ⁽¹⁾	0.7	0.8	0.9
Total audit and audit-related services	4.2	5.8	9.4
Fees to the auditors and their associates for other services			
- Services relating to taxation	—	—	0.1
- All other services	0.4	0.1	—
Total other services	0.4	0.1	0.1
Total	4.6	5.9	9.5

Note:

(1) Includes fees of €0.1 million in relation to statutory audits and €0.6 million in respect of regulatory audits.

Deloitte Accountants B.V. provided audit and audit-related services amounting to €0.8 million (2013 - €1.2 million; 2012 - €3.5 million). The remaining amounts relate to services provided by other Deloitte Member Firms. The amount paid to Deloitte LLP in 2014 in respect of audit fees was €1.5 million.

6 Tax

	2014 €m	2013 €m	2012 €m
Current tax			
Charge for the year	(57)	(49)	(85)
Over/(under) provision in respect of prior periods	18	162	(105)
	(39)	113	(190)
Deferred tax			
(Charge)/credit for the year	(15)	(45)	95
Under provision in respect of prior periods	(4)	(80)	(34)
Tax charge for the year	(58)	(12)	(129)

The actual tax charge differs from the expected tax credit computed by applying the statutory tax rate of the Netherlands of 25% as follows:

	2014 €m	2013 €m	2012 €m
Expected tax credit	14	36	222
Non-deductible items	(54)	(18)	(5)
Non-taxable items (including recycling of foreign exchange reserve)	65	35	87
Foreign profits taxed at other rates	6	5	(5)
Reduction in deferred tax asset following change in the rate of UK corporation tax ⁽¹⁾	—	—	(32)
Losses in year not recognised	(67)	(163)	(277)
Losses brought forward and utilised	7	26	68
Reduction in carrying value of deferred tax asset in respect of losses in Australia	—	—	(235)
(Increase)/reduction in carrying value of deferred tax liability in respect of associates	(6)	(29)	50
Adjustments in respect of prior years ⁽²⁾	14	111	(2)
Other	(37)	(15)	—
Actual tax charge	(58)	(12)	(129)

Notes:

- (1) In recent years the UK Government has steadily reduced the rate of UK corporation tax, with the latest enacted rate standing at 21% with effect from 1 April 2014 and 20% with effect from 1 April 2015. The closing deferred tax assets and liabilities have been calculated in accordance with rates enacted at the balance sheet date.
- (2) Prior period tax adjustments include the release of tax provisions on investment disposals and adjustments to reflect submitted tax computations in the Netherlands and overseas.

7 Dividends

RBS N.V. paid a dividend of €300 million during the year ended 31 December 2014 (2013 and 2012 - nil).

Notes on the consolidated accounts

8 Financial instruments – classification continued

The following tables show RBS N.V.'s financial assets and liabilities in accordance with the categories of financial instruments in IAS 39 with assets and liabilities outside the scope of IAS 39 shown separately.

Notes:

- (1) Includes reverse repurchase agreements of €1,070 million (2013 - €53 million; 2012 - €68 million).
- (2) Includes reverse repurchase agreements of nil (2013 - €2 million; 2012 - €5 million).
- (3) Includes treasury bills, similar securities and other eligible bills of €272 million (2013 - €84 million; 2012 - €486 million).
- (4) Includes repurchase agreements of €636 million (2013 - €11,710 million; 2012 - €12,624 million).
- (5) Includes repurchase agreements of €1 million (2013 - €33 million; 2012 - €18 million).
- (6) Includes bonds and medium term notes of €1,017 million (2013 - €1,319 million; 2012 - €2,468 million) and certificates of deposit and other commercial paper of nil (2013 - nil; 2012 - €116 million).
- (7) €14 million (2013 - €89 million; 2012 - €865 million) has been recognised in profit or loss for changes in credit risk associated with debt securities in issue designated as at fair value through profit or loss measured as the change in fair value from movements in the period in the credit risk premium payable by RBS N.V..
- (8) Includes the following intergroup balances:
 - Loans and advances to banks of €6,026 million (2013 - €2,823 million; 2012 - €8,903 million).
 - Loans and advances to customers of €373 million (2013 - €42 million; 2012 - nil).
 - Derivative assets of €2,255 million (2013 - €2,569 million; 2012 - €4,624 million).
 - Bank deposits of €3,843 million (2013 - €17,620 million; 2012 - €28,426 million).
 - Derivative liabilities of €3,403 million (2013 - €3,806 million; 2012 - €6,970 million).

Notes on the consolidated accounts

Amounts included in the consolidated income statement:

	2014 €m	2013 €m	2012 €m
Gains/(losses) on financial assets/liabilities designated as at fair value through profit or loss	54	(28)	94
Gains/(losses) on disposal or settlement of loans and receivables	2	(28)	(35)

The tables below present information on financial assets and liabilities that are offset in the balance sheet under IFRS or subject to enforceable master netting agreement together with financial collateral received or given.

9 Financial instruments - valuation

Valuation of financial instruments carried at fair value

Control environment

Common valuation policies, procedures, frameworks and models apply across the RBS Group. Therefore for the most part, discussions on these aspects below reflect those in the RBS Group as relevant for businesses and operations in RBS N.V..

RBS N.V.'s control environment for the determination of the fair value of financial instruments includes formalised protocols for the review and validation of fair values independent of the businesses entering into the transactions. There are specific controls to ensure consistent pricing policies and procedures, incorporating disciplined price verification. RBS N.V. ensures that appropriate attention is given to bespoke transactions, structured products, illiquid products and other instruments which are difficult to price.

A key element of the control environment is the independent price verification (IPV) process. Valuations are first performed by the business which entered into the transaction. Such valuations may be directly from available prices, or may be derived using a model and variable model inputs. These valuations are reviewed, and if necessary amended, by a team independent of those trading the financial instruments, in light of available pricing evidence.

IPV differences are classified according to the quality of independent market observables into IPV quality bands linked to the fair value hierarchy principles, as laid out in IFRS 13 'Fair Value Measurement'. These differences are classified into fair value levels 1, 2 and 3 (with the valuation uncertainty risk increasing as the levels rise from 1 to 3) and then further classified into high, medium, low and indicative depending on the quality of the independent data available to validate the prices. Valuations are revised if they are outside agreed thresholds.

IPV takes place at least monthly, at month end date, for exposures in the regulatory trading book and at least quarterly for exposures in the regulatory banking book. Monthly meetings are held between the business and the support functions to discuss the results of the IPV and pricing reserves. The IPV control includes formalised reporting and escalation of any valuation differences in breach of established thresholds. The Pricing Unit determines IPV policy, monitors adherence to that policy and performs additional independent reviews of highly subjective valuation issues.

Valuation models are subject to a review process which requires different levels of model documentation, testing and review, depending on the complexity of the model and the size of RBS N.V.'s exposure. A key element of the control environment for model use is a Modelled Product Review Committee, made up of valuations experts from several functions within RBS Group. This committee sets the policy for model documentation, testing and review, and prioritises models with significant exposure for review by RBS Group's Pricing Model Risk team. Potential valuation uncertainty is a key input in determining model review priorities at these meetings. The Pricing Model Risk team within RBS Group Risk Management, which is independent of the trading businesses, assesses the appropriateness of the application of the model to the product, the mathematical robustness of the model, and where appropriate, considers alternative modelling approaches.

The RBS Group CIB and RCR Valuation Control Committees meet formally on a monthly basis to discuss independent pricing, reserving and valuation issues. All material methodology changes require review and ratification by these committees. The committees, which include valuation specialists representing several independent review functions, comprise Market Risk, Pricing Model Risk, Finance and senior business representatives.

The RBS Group Executive Valuation Committee discusses the issues escalated by the CIB and RCR Valuations Committees, and other relevant issues including prudential valuation. This committee covers key material and subjective valuation issues within the trading businesses and provides ratification to the appropriateness of areas with high levels of residual valuation uncertainty. Committee members include RBS Group Chief Financial Officer, RBS Group Financial Controller, RBS Group Chief Accountant and other senior members within finance and risk.

The CIB Valuation Committee operates under delegated authority of the CIB Risk Committee. The CIB Valuation Committee submits a quarterly paper covering the key areas that are governed by them to the CIB Risk Committee. Additionally, the CIB Valuation Committee may escalate items to the CIB Risk Committee on a more frequent basis as appropriate.

Market risk metrics such as value-at-risk (VaR), Incremental Risk Charge and stressed value-at-risk (SVaR) cover financial instruments in CIB and RCR. RBS Group has a framework to quantify those market risks not adequately captured by standard market risk framework such as VaR and SVaR - refer to pages 64 and 65 for details.

Valuation hierarchy

There is a process to review and control the classification of financial instruments into the three level hierarchy established by IFRS 13. Some instruments may not easily fall into a level of the fair value hierarchy and judgment may be required as to which level the instrument is classified.

Initial classification of a financial instrument is carried out by the Product Control team following the principles in IFRS 13. They base their judgment on information gathered during the IPV process for instruments which include the sourcing of independent prices and model inputs. The quality and completeness of the information gathered in the IPV process gives an indication as to the liquidity and valuation uncertainty of an instrument.

These initial classifications are reviewed and challenged by the Pricing Unit, and are also subject to senior management review. Particular attention is paid to instruments crossing from one level to another, new instrument classes or products, instruments that are generating significant profit and loss and instruments where valuation uncertainty is high.

Valuation techniques

RBS N.V. derives fair value of its instruments differently depending on whether the instrument is a modelled or non-modelled product.

Non-modelled products

Non-modelled products are valued directly from a price input typically on a position by position basis and include cash, equities and most debt securities.

Notes on the consolidated accounts

Modelled products

Modelled products valued using a pricing model range in complexity from comparatively vanilla products such as interest rate swaps and options (e.g. interest rate caps and floors) through to more complex derivatives. The valuation of modelled products requires an appropriate model and inputs into this model. Sometimes models are also used to derive inputs (e.g. to construct volatility surfaces). RBS N.V. uses a number of modelling methodologies.

Inputs to valuation models

Values between and beyond available data points are obtained by interpolation and extrapolation. When utilising valuation techniques, the fair value can be significantly affected by the choice of valuation model and by underlying assumptions concerning factors such as the amounts and timing of cash flows, discount rates and credit risk. The principal inputs to these valuation techniques are as follows:

- Bond prices - quoted prices are generally available for government bonds, certain corporate securities and some mortgage-related products.
- Credit spreads - where available, these are derived from prices of credit default swaps or other credit based instruments, such as debt securities. For others, credit spreads are obtained from pricing services.
- Interest rates - these are principally benchmark interest rates such as the London Interbank Offered Rate (LIBOR), Overnight Index Swaps rate (OIS) and other quoted interest rates in the swap, bond and futures markets.
- Foreign currency exchange rates - there are observable markets both for spot and forward contracts and futures in the world's major currencies.
- Equity and equity index prices - quoted prices are generally readily available for equity shares listed on the world's major stock exchanges and for major indices on such shares.
- Commodity prices - many commodities are actively traded in spot and forward contracts and futures on exchanges in London, New York and other commercial centres.
- Price volatilities and correlations - volatility is a measure of the tendency of a price to change with time. Correlation measures the degree which two or more prices or other variables are observed to move together. If they move in the same direction there is positive correlation; if they move in opposite directions there is negative correlation. Volatility is a key input in valuing options and the valuation of certain products such as derivatives with multiple underlying variables that are correlation-dependent. Volatility and correlation values are obtained from broker quotations, pricing services or derived from option prices.

- Prepayment rates - the fair value of a financial instrument that can be prepaid by the issuer or borrower differs from that of an instrument that cannot be prepaid. In valuing prepayable instruments that are not quoted in active markets, RBS N.V. considers the value of the prepayment option.
- Counterparty credit spreads - adjustments are made to market prices (or parameters) when the creditworthiness of the counterparty differs from that of the assumed counterparty in the market price (or parameters).
- Recovery rates/loss given default - these are used as an input to valuation models and reserves for asset-backed securities and other credit products as an indicator of severity of losses on default. Recovery rates are primarily sourced from market data providers or inferred from observable credit spreads.

RBS N.V. uses consensus prices for the IPV of some instruments. The consensus service encompasses the equity, interest rate, currency, commodity, credit, property, fund and bond markets, providing comprehensive matrices of vanilla prices and a wide selection of exotic products. CIB and RCR contribute to consensus pricing services where there is a significant interest either from a positional point of view or to test models for future business use. Data sourced from consensus pricing services is used for a combination of control processes including direct price testing, evidence of observability and model testing. In practice this means that RBS N.V. submits prices for all material positions for which a service is available. Data from consensus services are subject to the same level of quality review as other inputs used for IPV process

In order to determine a reliable fair value, where appropriate, management applies valuation adjustments to the pricing information gathered from the above sources. The sources of independent data are reviewed for quality and are applied in the IPV processes using formalised input quality hierarchy. These adjustments reflect RBS N.V.'s assessment of factors that market participants would consider in setting a price.

Furthermore, on an ongoing basis, RBS N.V. assesses the appropriateness of any model used. To the extent that the price determined by internal models does not represent the fair value of the instrument, for instance in highly stressed market conditions, RBS N.V. makes adjustments to the model valuation to calibrate to other available pricing sources. Where unobservable inputs are used, RBS N.V. may determine a range of possible valuations derived from differing stress scenarios to determine the sensitivity associated with the valuation.

When establishing the fair value of a financial instrument using a valuation technique, RBS N.V. considers certain adjustments to the modelled price which market participants would make when pricing that instrument. Such adjustments include the credit quality of the counterparty and adjustments to compensate for any known model limitations.

Credit valuation adjustments

Credit valuation adjustments (CVA) represent an estimate of the adjustment to fair value that a market participant would make to incorporate the risk inherent in counterparty derivative exposures.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

Own credit

RBS N.V. takes into account the effect of its own credit standing when valuing financial liabilities recorded at fair value in accordance with IFRS. Own credit spread adjustments are made to issued debt held at fair value, including issued structured notes, and derivatives. An own credit adjustment is applied to positions where it is believed that counterparties would consider RBS N.V.'s creditworthiness when pricing trades.

For issued debt and structured notes this adjustment is based on debt issuance spreads above average inter-bank rates (at a range of tenors). Secondary senior debt issuance spreads are used in the calculation of the own credit adjustment applied to senior debt.

The fair value of RBS N.V.'s derivative financial liabilities is adjusted to reflect RBS N.V.'s own credit risk (DVA). Expected gains are applied to estimated potential future negative exposures, the modelling of which is consistent with the approach used in calculation of CVA relating to other counterparties. Expected gains are determined from market implied probabilities of default and recovery levels. Funding valuation adjustments (FVA) is also now considered the primary adjustment applied to derivative liabilities; the extent to which DVA and FVA overlap is eliminated from DVA.

The own credit adjustment for fair value does not alter cash flows, is not used for performance management, is disregarded for regulatory capital reporting processes and will reverse over time as the liabilities mature.

The reserve movement between periods will not equate to the reported profit or loss for own credit. The balance sheet reserves are stated by conversion of underlying currency balances at spot rates for each period whereas the income statement includes intra-period foreign exchange sell-offs.

The effect of change in credit spreads could reverse in future periods provided the liability is not repaid at a premium or a discount.

The cumulative own credit adjustments on own liabilities are set out below.

	Debt securities in issue and subordinated liabilities (1) €m	Derivatives €m	Total €m
Cumulative own credit adjustment (decrease)/increase in liability			
2014	(212)	(5)	(217)
2013	(230)	(13)	(243)
2012	(344)	(24)	(368)
Book values of underlying liabilities	€bn		
2014	1.3		
2013	1.4		
2012	2.2		

Note:
(1) Includes wholesale and retail note issuances.

Notes:

(1) Level 1: valued using unadjusted quoted prices in active markets, for identical financial instruments.

Level 2: valued using techniques based significantly on observable market data. Instruments in this category are valued using:

- (a) quoted prices for similar instruments or identical instruments in markets which are not considered to be active; or
(b) valuation techniques where all the inputs that have a significant effect on the valuations are directly or indirectly based on observable market data.

Level 3: instruments in this category have been valued using a valuation technique where at least one input which could have a significant effect on the instrument's valuation, is not based on observable market data. Where inputs can be observed from market data without undue cost and effort, the observed input is used. Otherwise, RBS N.V. determines a reasonable level for the input.

- (2) Sensitivity represents the favourable and unfavourable effect on the income statement or the statement of comprehensive income due to reasonably possible changes to valuations using reasonably possible alternative inputs to RBS N.V.'s valuation techniques or models. Totals for sensitivities are not indicative of the total potential effect on the income statement or the statement of comprehensive income. The level 3 sensitivities above are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely overall potential uncertainty on the whole portfolio. The figures are aggregated and do not reflect the correlated nature of some of the sensitivities. In particular, for some of the portfolios the sensitivities may be negatively correlated where a downwards movement in one asset would produce an upwards movement in another, but due to the additive presentation of the above figures this correlation cannot be observed. The actual potential downside sensitivity of the total portfolio may be less than the non-correlated sum of the additive figures as shown in the above table.
- (3) Transfers between levels are deemed to have occurred at the beginning of the quarter in which the instruments were transferred. There were no significant transfers between level 1 and level 2.
- (4) RBS N.V. does not have any material liabilities measured at fair value that are issued with an inseparable third party credit enhancement.
- (5) Level 3 instruments were €0.2 billion for both assets and liabilities (2013 - €0.4 billion assets and liabilities; 2012 - €0.6 billion assets and €0.5 billion liabilities). 2014 - the decrease during the year primarily related to €0.2 billion sales for both assets and liabilities and income statement losses of €0.1 billion on assets and gains of €0.1 billion on liabilities. Transfers from level 2 to 3 were €66 million assets and €33 million liabilities. There were no material transfers from level 3 to level 2. Amounts recognised in other comprehensive income were not material. 2013 - the decrease during the year primarily related to transfer to disposal groups and sales of €0.3 billion assets and liabilities, transfers from level 2 to level 3 of €0.3 billion liabilities, asset purchases of €0.2 billion and losses of €0.1 billion on assets recognised in the income statement. There were no material transfers from level 3 to level 2. Amounts recognised in other comprehensive income were not material. 2012 - the decrease during the year primarily related to transfer to disposal groups and sales of €1.1 billion for assets and €0.2 billion for liabilities, settlements of €0.3 billion on assets and €0.5 billion on liabilities; and income statement gains of €0.1 billion on assets and income statement losses of €0.1 billion on liabilities. There were no material transfers in or out of Level 3. Amounts recognised in other comprehensive income were not material. The amount of the total gains or losses included in profit or loss that is attributable to the change in unrealised gains or losses relating to those assets and liabilities held at the end of the reporting period was not material for any period presented.
- (6) For an analysis of derivatives by type of contract –see note 12..

Notes on the consolidated accounts

The Level 3 sensitivities above are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely potential uncertainty on the portfolio as a whole. The figures are aggregated and do not reflect the correlated nature of some of the sensitivities. In particular, for some of the portfolios the sensitivities may be negatively correlated where a downwards movement in one asset would produce an upwards movement in another, but due to the additive presentation of the above figures this correlation cannot be displayed. The actual potential downside sensitivity of the total portfolio may be less than the non-correlated sum of the additive figures as shown in the above table.

Judgmental issues

The diverse range of products traded by RBS N.V. results in a wide range of instruments that are classified into Level 3 of the hierarchy. Whilst the majority of these instruments naturally fall into a particular level, for some products an element of judgement is required. The majority of RBS N.V.'s financial instruments carried at fair value are classified as Level 2: inputs are observable either directly (i.e. as a price) or indirectly (i.e. derived from prices).

Active and inactive markets

A key input in the decision making process for the allocation of assets to a particular level is liquidity. In general, the degree of valuation uncertainty depends on the degree of liquidity of an input

Where markets are liquid or very liquid, little judgement is required. However, when the information regarding the liquidity in a particular market is not clear, a judgement may need to be made. This can be made more difficult as assessing the liquidity of a market is not always straightforward. For an equity traded on an exchange, daily volumes of trading can be seen, but for an over-the-counter (OTC) derivative assessing the liquidity of the market with no central exchange can be more difficult.

A key related issue is where a market moves from liquid to illiquid or vice versa. Where this change is considered to be temporary, the classification is not changed. For example, if there is little market trading in a product on a reporting date but at the previous reporting date and during the intervening period the market has been considered to be liquid, the instrument will continue to be classified in the same level in the hierarchy. This is to provide consistency so that transfers between levels are driven by genuine changes in market liquidity and do not reflect short term or seasonal effects.

Interaction with the IPV process

The determination of an instrument's level cannot be made at a global product level as a single product type can be in more than one level. For example, a single name corporate credit default swap could be in Level 2 or Level 3 depending on whether the reference counterparty is liquid or illiquid.

As part of RBS N.V.'s IPV process, data are gathered at a trade level from market trading activity, trading systems, pricing services, consensus pricing providers, brokers and research material amongst other sources.

The breadth and depth of the IPV data allows for a rules based quality assessment to be made of market activity, liquidity and pricing uncertainty, which assists with the process of allocation to an appropriate level. Where suitable independent pricing information is not readily available the instrument will be considered to be Level 3.

Modelled products

For modelled products the market convention is to quote these trades through the model inputs or parameters as opposed to a cash price equivalent. A mark-to-market is derived from the use of the independent market inputs calculated using RBS N.V.'s model.

The decision to classify a modelled asset as Level 2 or 3 will be dependent upon the product/model combination, the currency, the maturity, the observability and quality of input parameters and other factors. All these need to be assessed to classify the asset.

An assessment is made of each input into a model. There may be multiple inputs into a model and each is assessed in turn for observability and quality. As part of the process of classifying the quality of IPV results the IPV quality classifications have been designed to follow the accounting level classifications, although with a further level of granularity. For example there are a number of different IPV quality levels that equate to a Level 2 classification and so on.

If an input fails the observability or quality tests then the instrument is considered to be in Level 3 unless the input can be shown to have an insignificant effect on the overall valuation of the product.

The majority of derivative instruments, for example, vanilla interest rate swaps, foreign exchange swaps and liquid single name credit derivatives are classified as Level 2 as they are vanilla products valued using observable inputs. The valuation uncertainty on these is considered to be low and both input and output testing may be available.

Non-modelled products

Non-modelled products are generally quoted on a price basis and can therefore be considered for each of the three levels. This is determined by the market activity liquidity and valuation uncertainty of the instruments which is in turn measured from the availability of independent data used by the IPV process to allocate positions to IPV quality levels.

The availability and quality of independent pricing information is considered during the classification process. An assessment is made regarding the quality of the independent information. For example where consensus prices are used for non-modelled products, a key assessment of the quality of a price is the depth of the number of prices used to provide the consensus price. If the depth of contributors falls below a set hurdle rate, the instrument is considered to be Level 3. This hurdle rate is that used in the IPV process to determine the IPV quality rating. However, where an instrument is generally considered to be illiquid, but regular quotes from market participants exist, these instruments may be classified as Level 2 depending on frequency of quotes, other available pricing and whether the quotes are used as part of the IPV process or not.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

For some instruments with a wide number of available price sources, there may be differing quality of available information and there may be a wide range of prices from different sources. In these situations the highest quality source is used to determine the classification of the asset. For example, a tradable quote would be considered a better source than a consensus price.

Level 3 portfolios and sensitivity methodologies

Reasonably possible alternative assumptions of unobservable inputs are determined based on a 90% confidence interval. The assessments recognise different favourable and unfavourable valuation movements where appropriate. Each unobservable input within a product is considered separately and sensitivity is reported on an additive basis.

Alternative assumptions are determined with reference to all available evidence including consideration of the following: quality of independent pricing information taking into account consistency between different sources, variation over time, perceived tradability or otherwise of available quotes; consensus service dispersion ranges; volume of trading activity and market bias (e.g. one-way inventory); day 1 profit or loss arising on new trades; number and nature of market participants; market conditions; modelling consistency in the market; size and nature of risk; length of holding of position; and market intelligence.

Other considerations

Valuation adjustments

CVA applied to derivative exposures to other counterparties and own credit adjustments applied to derivative liabilities (DVA) are calculated on a portfolio basis. Whilst the methodology used to calculate each of these adjustments references certain inputs which are not based on observable market data, these inputs are not considered to have a significant effect on the net valuation of the related portfolios. The classification of the derivative portfolios which the valuation adjustments are applied to is not determined by the observability of the valuation adjustments, and any related sensitivity does not form part of the Level 3 sensitivities presented.

Own credit - issued debt

For structured notes issued the own credit adjustment is based on debt issuance spreads above average inter-bank rates at the reporting date (at a range of tenors). Whilst certain debt issuance spreads are not based on observable market data, these inputs are not considered to have a significant effect on the valuation of individual trades. Neither the classification of structured notes issued nor any related valuation sensitivities are determined by the observability of the debt issuance spreads.

Fair value of financial instruments not carried at fair value

The following table shows the carrying value and fair value of financial instruments carried at amortised cost on the balance sheet.

2014	Items where fair value approximates carrying value €m	Carrying value €m	Fair Value €m	Fair value hierarchy level	
				Level 2 €m	Level 3 €m

The fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Quoted market values are used where available; otherwise, fair values have been estimated based on discounted expected future cash flows and other valuation techniques. These techniques involve uncertainties and require assumptions and judgments covering prepayments, credit risk and discount rates. Furthermore there is a wide range of potential valuation techniques. Changes in these assumptions would significantly affect estimated fair values. The fair values reported would not necessarily be realised in an immediate sale or settlement.

The assumptions and methodologies underlying the calculation of fair values of financial instruments at the balance sheet date are as follows:

Short-term financial instruments

For certain short-term financial instruments: cash and balances at central banks, items in the course of collection from other banks, settlement balances, items in the course of transmission to other banks, demand deposits and notes in circulation, fair value approximates to carrying value.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

Loans and advances to banks and customers

In estimating the fair value of loans and advances to banks and customers measured at amortised cost, RBS N.V.'s loans are segregated into appropriate portfolios reflecting the characteristics of the constituent loans. Two principal methods are used to estimate fair value:

- Contractual cash flows are discounted using a market discount rate that incorporates the current spread for the borrower or where this is not observable, the spread for borrowers of a similar credit standing. This method is used for the majority of CIB portfolios where most counterparties have external ratings.
- Expected cash flows (unadjusted for credit losses) are discounted at the current offer rate for the same or similar products. This approach is adopted for lending portfolios reflecting the more homogeneous nature of these portfolios.

Debt securities

The majority of debt securities are valued using quoted prices in active markets or using quoted prices for similar assets in active markets.

Fair values are determined using discounted cash flow valuation techniques.

Deposits by banks and customer accounts

Fair values of deposits are estimated using discounted cash flow valuation techniques.

Debt securities in issue and subordinated liabilities

Fair values are determined using quoted prices for similar liabilities where available or by reference to valuation techniques and adjusting for own credit spreads where appropriate.

10 Financial instruments-maturity analysis

Remaining maturity

The following table shows the residual maturity of financial instruments, based on contractual date of maturity.

	2014			2013			2012

Notes on the consolidated accounts

Assets and liabilities by contractual cash flow maturity

The tables on the following page show the contractual undiscounted cash flows receivable and payable, up to a period of 20 years, including future receipts and payments of interest of on-balance sheet assets by contractual maturity. The balances in the following tables do not agree directly with the consolidated balance sheet, as the tables include all cash flows relating to principal and future coupon payments, presented on an undiscounted basis. The tables have been prepared on the following basis:

Financial assets have been reflected in the time band of the latest date on which they could be repaid, unless earlier repayment can be demanded by RBS N.V.. Financial liabilities are included at the earliest date on which the counterparty can require repayment, regardless of whether or not such early repayment results in a penalty.

If the repayment of a financial instrument is triggered by, or is subject to, specific criteria such as market price hurdles being reached, the asset is included in the time band that contains the latest date on which it can be repaid, regardless of early repayment. The liability is included in the time band that contains the earliest possible date on which the conditions could be fulfilled, without considering the probability of the conditions being met.

For example, if a structured note is automatically prepaid when an equity index exceeds a certain level, the cash outflow will be included in the less than three months period, whatever the level of the index at the year end. The settlement date of debt securities in issue, issued by certain securitisation vehicles consolidated by RBS N.V., depends on when cash flows are received from the securitised assets. Where these assets are prepayable, the timing of the cash outflow relating to securities assumes that each asset will be prepaid at the earliest possible date. As the repayments of assets and liabilities are linked, the repayment of assets in securitisations is shown on the earliest date that the asset can be prepaid, as this is the basis used for liabilities.

The principal amounts of financial assets and liabilities that are repayable after 20 years or where the counterparty has no right to repayment of the principal are excluded from the table, as are interest payments after 20 years.

Held-for-trading assets and liabilities - held-for-trading assets of €5.3 billion (2013 - €6.6 billion; 2012 - €11.2 billion) and liabilities of €5.5 billion (2013 - €6.2 billion; 2012 - €9.3 billion) have been excluded from the tables below in view of their short-term nature.

Debt securities	26	39	133

RBS N.V. holds collateral in respect of certain loans and advances to banks and to customers that are past due or impaired. Such collateral includes mortgages over property; charges over business assets such as plant, inventories and trade debtors; and guarantees of lending from parties other than the borrower.

No loans have been subject to forbearance in the past 12 months that would otherwise have been past due or impaired (2013 and 2012 - nil).

12 Derivatives

Companies in RBS N.V. transact derivatives as principal either as a trading activity or to manage balance sheet foreign exchange, interest rate and credit risks.

RBS N.V. enters into fair value hedges, cash flow hedges and hedges of net investments in foreign operations. The majority of RBS N.V.'s interest rate hedges relate to the management of RBS N.V.'s non-trading interest rate risk. RBS N.V. manages this risk within approved limits. Residual risk positions are hedged with derivatives principally interest rate swaps. Suitable larger ticket financial instruments are fair value hedged and qualifying for hedge accounting. The majority of RBS N.V.'s fair value hedges involve interest rate swaps hedging the interest rate risk in recognised financial assets and financial liabilities. RBS N.V. hedges its net investments in foreign operations with currency borrowings and forward foreign exchange contracts.

For fair value hedge relationships of interest rate risk, the hedged items are typically large corporate fixed-rate loans, fixed-rate finance leases, fixed-rate medium-term notes or preference shares classified as debt.

The initial and ongoing prospective effectiveness of fair value hedge relationships is assessed on a cumulative basis by comparing movements in the fair value of the hedged item attributable to the hedged risk with changes in the fair value of the hedging interest rate swap or by comparing the respective changes in the price value of a basis point. Retrospective effectiveness is assessed by comparing the actual movements in the fair value of the hedged items attributable to the hedged risk with actual movements in the fair value of the hedging derivative over the life to date of the hedging relationship.

Notes on the consolidated accounts

The following table shows the notional amounts and fair values of RBS N.V.'s derivatives.

	2014			2013			2012

At 31 December 2013, RBS N.V. held 38% of the shares of Alcover AG ('Alcover') accounted for as an associate with a carrying value of €59 million. On 2 July 2014, RBS N.V. acquired the remaining 62% of Alcover shares from the other Consortium Members for consideration of €99 million. The acquisition date fair value of Alcover's net assets was €160 million principally: debt securities (€342 million); cash and cash equivalents (€71 million); less insurance claims reserves (€241 million). There was no attributable goodwill. Alcover is consolidated by RBS N.V.; its profit since acquisition was €2 million. Alcover's insurance business is in run-off. Claims reserves represent the risk-adjusted cash outflows required to settle outstanding claims as they develop. These reserves are established on the basis of an external actuarial valuation and reflect historical claims experience.

Impairment losses	—	—	(5)
Operating profit before tax	27	31	28
Tax	(12)	(12)	(11)
Profit after tax	15	19	17

All Dutch State acquired businesses are classified as discontinued operations. Following the successful demerger of the majority of the Dutch State acquired businesses into the new ABN AMRO Bank on 6 February 2010, these businesses met the IFRS requirements of a disposal group held for sale. Legal separation of the new ABN AMRO Bank occurred on 1 April 2010 through a sale of the shares in that entity by RBS Holdings N.V. to a holding company called ABN AMRO Group N.V., a newly incorporated entity owned by the Dutch State. The gain on sale for the Dutch State acquired businesses was included within the distribution paid to RFS Holdings, in favour of the Dutch State. This disposal group represented a major line of business and therefore results for the period are presented as results from discontinued operations as a single line item in the consolidated income statement with prior period amounts re-presented. Profits from discontinued operations include the related operating results and if applicable the gain on sale.

(b) Assets and liabilities of disposal groups

	2014 €m	2013 €m	2012 €m
Assets of disposal groups			
Cash and balances at central banks	—	6	3,565
Loans and advances to banks	—	134	1,278
Loans and advances to customers	1,213	1,328	3,240
Debt securities and equity shares	—	379	2,909
Derivatives	—	154	1,932
Other assets	44	47	880
	1,257	2,048	13,804
Liabilities of disposal groups			
Deposits by banks	—	—	865
Customer accounts	42	205	7,468
Derivatives	—	127	1,902
Other liabilities	4	75	791
	46	407	11,026

As at 31 December 2014, assets and liabilities of disposal groups related mainly to the remaining Dutch State acquired businesses.

As at 31 December 2013, the assets and liabilities of disposal groups related mainly to the Thai business; other assets and liabilities related to certain loan portfolios in the Latin American region, remaining Private Equity portfolios within the Non-Core segment, and the remaining Dutch State acquired businesses.

As at 31 December 2012, the assets and liabilities of disposal groups represented balances of a number of businesses in the Asian region, loan portfolios in the Latin American region and remaining Private Equity portfolios within the Non-Core segment, as well as the remaining Dutch State acquired businesses.

In accordance with the classification of financial instruments in IAS 39, cash and balances at central banks, loans and advances to banks and to customers, deposits by banks and customer accounts and settlement balances included within assets and liabilities of disposal groups are classified as financial instruments at amortised cost. Derivatives included within assets and liabilities of disposal groups are classified as held-for-trading and measured at fair value. The majority of debt securities and equity shares within assets of disposal groups are either classified as held-for-trading (2013 - €29 million and 2012 - €618 million) or as available-for-sale (2013 - €161 million and 2012 - €1,433 million) and are measured at fair value. The majority of financial instruments carried at fair value within assets and liabilities of disposal groups at 31 December, 2013 and 2012 are classified as level 2.

At 31 December 2014	47	4	75

Other provisions include tax provisions and other provisions arising in the normal course of business.

Arising out of its normal business operations, RBS N.V. is party to legal proceedings in the Netherlands, United Kingdom, the United States of America and other jurisdictions. Litigation provisions at 31 December 2014 related to numerous proceedings; no individual provision is material. Detailed descriptions of the Group's legal proceedings and discussion of the associated uncertainties are given in Note 26.

At 31 December 2014 (2)	(1)	(1)	(10)	77	3	—	(1)	—	(13)	54

Note:

- (1) Predominantly relates to losses incurred on UK businesses which were transferred to RBS plc. Under UK tax rules the associated tax losses move to RBS plc as the businesses transfer. RBS Group reimbursed RBSH Group for the value of the losses attached to the transferring businesses. No tax losses were transferred in 2014 (2013: €1.4 billion of tax losses transferred; 2012: nil)
- (2) Other deferred tax assets are recognised, that depend on the availability of future taxable profits in excess of profits arising from the reversal of other temporary differences. Tax losses in the Netherlands can be carried forward for up to nine years, however business projections prepared for impairment review indicate it is probable that insufficient future taxable income will be available against which to offset these recognised deferred tax assets in respect of the unused tax losses. Therefore these tax assets have been fully impaired. For the remaining deferred tax assets, business projections prepared for impairment reviews indicate that it is probable that sufficient future taxable income will be available against which to offset these recognised deferred tax assets. In jurisdictions where doubt exists over the availability of future taxable profits, deferred tax assets of €2,259 million (2013 - €2,492 million; 2012 - €2,930 million) have not been recognised in respect of tax losses carried forward of €9,242 million (2013 - €10,052 million; 2012 - €11,796 million). Of these losses, none will expire within one year, €5,302 million within five years and €2,604 million thereafter. The balance of tax losses carried forward has no time limit.

Notes on the consolidated accounts

21 Subordinated liabilities

	2014 €m	2013 €m	2012 €m

22 Share capital

The company's share capital at 31 December 2014, 2013 and 2012 consisted of 89,287 issued and full paid ordinary shares of €0.56 each. The Company's authorised share capital amounts to €224,000. It comprises 400,000 ordinary shares, each with a nominal value of €0.56. All issued ordinary shares have been fully paid.

The General Meeting of the Shareholders of RBS N.V. approved on 29 February 2012 and executed on 21 June 2012, a reduction of the issued capital to €50,000 through a purchase of 3,306,754,046 shares from its shareholder for no consideration followed by a cancellation of those shares, and to reduce its authorised share capital to €224,000.

Each ordinary share entitles the holder to cast one vote. Subject to certain exceptions provided for by law or in the articles of association, resolutions are passed by an absolute majority of the votes cast. When shares are issued, each holder of shares shall have pre-emptive right, in proportion to the aggregate amount of their shares, except in the case of an issue of shares for a consideration other than in cash.

In the event of the dissolution and liquidation of RBS N.V., the assets remaining after payment of all debts will be distributed to the holders of ordinary shares on a pro-rata basis.

Notes on the consolidated accounts

23 Reserves

Share premium reserve

During 2014, there was a capital injection from RFS Holdings BV reflecting amounts received by RFS Holdings BV from Santander (€72 million) and NL Financial Investments (€67 million). In addition, there was a distribution to RFS Holdings BV of €103 million to fund the repayment of its loan from ABN Amro Bank.

During 2013, the share premium reserve was reduced by €0.2 billion as a result of a cross border merger.

During 2012, the capital reduction described in Note 22 increased share premium by €1.9 billion. It was then reduced by €0.9 billion as a result of the Dutch Scheme.

As a part of the Dutch Scheme one share was issued against the share premium account.

Ordinary shares carry certain pre-emption rights and rank equally in voting, dividend and liquidation rights.

Dutch law prescribes that only the freely distributable reserves of the company are taken into account for the purpose of making distributions and in determining the permissible applications of the share premium account. RBS N.V. optimises capital efficiency by maintaining reserves in subsidiaries, including regulated entities. The remittance of reserves to the company or the redemption of capital by regulated entities may be subject to maintaining the capital resources required by the relevant regulator.

24 Structured entities and asset transfers

Structured entities

A structured entity (SE) is an entity that has been designed such that voting or similar rights are not the dominant factor in deciding who controls the entity, for example when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. SEs are usually established for a specific, limited purpose. They do not carry out a business or trade and typically have no employees. They take a variety of legal forms - trusts, partnerships and companies - and fulfil many different functions. As well as being a key element of securitisations, SEs are also used in fund management activities to segregate custodial duties from the fund management advice.

Consolidated structured entities

Securitisations

In a securitisation, assets, or interests in a pool of assets, are transferred generally to a SE which then issues liabilities to third party investors. The majority of securitisations are supported through liquidity facilities or other credit enhancements. RBS N.V. arranges securitisations to facilitate client transactions and undertakes own asset securitisations to sell or to fund portfolios of financial assets. RBS N.V. also acts as an underwriter and depositor in securitisation transactions in both client and proprietary transactions.

RBS N.V.'s involvement in client securitisations takes a number of forms. It may: sponsor or administer a securitisation programme; provide liquidity facilities or programme-wide credit enhancement; and purchase securities issued by the vehicle.

Own asset securitisations

In own-asset securitisations, the pool of assets held by the SE is either originated by RBS N.V., or (in the case of whole loan programmes) purchased from third parties.

Notes on the consolidated accounts

Unconsolidated structured entities

RBS N.V.'s interests in unconsolidated structured entities are analysed below.

	2014			2013		
	Asset backed securitisation vehicles €m	Investment funds and other €m	Total €m	Asset backed securitisation vehicles €m	Investment funds and other €m	Total €m

Equity shares	—	22	22	—	41	41
Derivative assets	—	—	—	—	66	66
Derivative liabilities	(1)	—	(1)	—	(5)	(5)
Total	7	22	29	—	233	233
Other than held-for-trading						
Loans and advances to customers	38	—	38	26	5	31
Debt securities	153	21	174	5,758	52	5,810
	191	21	212	5,784	57	5,841
Maximum exposure	198	43	241	5,784	290	6,074

Notes:

- (1) Income from interests in unconsolidated structured entities includes interest receivable, changes in fair value, and other income less impairments that may be required.
- (2) A sponsored entity is a structured entity, established by RBS N.V. where RBS N.V. provides liquidity and/or credit enhancements or provides ongoing services to the entity. RBS N.V. can act as sponsor for its own or for customers' transactions.
- (3) The 2013 entities in unconsolidated structured entities have been revised.

Transfers that do not qualify for derecognition

Asset transfers

Under IAS 39 a financial asset is transferred if RBS N.V. either (a) transfers the contractual rights to receive the asset's cash flows; or (b) retains the right to the asset's cash flows but assumes a contractual obligation to pay those cash flows to a third party. Following a transfer the financial asset will be derecognised; not derecognised and retained in full on RBS N.V.'s balance sheet; continue to be recognised on the balance sheet to the extent of RBS N.V.'s continuing involvement.

Securities repurchase agreements and lending transactions

RBS N.V. enters into securities repurchase agreements and securities lending transactions under which it transfers securities in accordance with normal market practice.

Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level. Under standard terms for repurchase transactions in the UK and US markets, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transaction.

Securities sold under such repurchase transactions are not derecognised if RBS N.V. retains substantially all the risks and rewards of ownership. The fair value (and carrying value) of debt securities transferred under repurchase transactions included on the balance sheet was €0.6 billion (2013 - €12.4 billion; 2012 - €10.9 billion). Securities received as collateral under reverse repurchase agreements amounted to €1.1 billion (2013 - €0.1 billion; 2012 - €0.1 billion), of which nil (2013 and 2012 - €0.1 billion) had been sold or repledged as collateral of RBS N.V.'s own transactions.

Notes on the consolidated accounts

24 Structured entities and asset transfers continued

Assets pledged as collateral

RBS N.V. pledges collateral with its counterparties in respect of bank and other borrowings. This primarily relates to assets pledged for bank and other borrowings.

	2014 €m	2013 €m	2012 €m
Assets pledged against liabilities			
Loans and advances to banks	321	804	1,510

Total Tier 2 capital	1,898	494	1,934
Total regulatory capital	6,824	4,533	6,473

It is RBS N.V.'s policy to maintain an appropriate capital base, to expand it as appropriate and to utilise it efficiently throughout its activities to optimise the return to shareholders, while maintaining a prudent relationship between the capital base and the underlying risks of the business. In carrying out this policy, RBS N.V. has regard to the supervisory requirements of DNB. DNB uses Capital Ratios as a measure of capital adequacy in the Dutch banking sector, comparing a bank's capital resources with its risk-weighted assets (RWAs) (the assets and off-balance sheet exposures are weighted to reflect the inherent credit and other risks). RBS N.V. has complied with its capital requirements during the year.

A number of subsidiaries and sub-groups within RBS N.V. are subject to various individual regulatory capital requirements in the UK and overseas. Furthermore, the payment of dividends by subsidiaries and the ability of members of RBS N.V. to lend money to other members of RBS N.V. may be subject to restrictions such as local regulatory or legal requirements, the availability of reserves and financial and operating performance.

Notes on the consolidated accounts

26 Memorandum items

Contingent liabilities and commitments

The amounts shown in the table below are intended only to provide an indication of the volume of business outstanding at 31 December 2014. Although RBS N.V. is exposed to credit risk in the event of non-performance of the obligations undertaken by customers, the amounts shown do not, and are not intended to, provide any indication of RBS N.V.'s expectation of future losses.

	Less than 1 year €m	More than 1 year but less than 3 years €m	More than 3 years but less than 5 years €m	Over 5 years €m	2014 €m	2013 €m	2012 €m
Contingent liabilities:							
Guarantees and assets pledged as collateral security	455	67	1,148	4,024	5,694	6,884	10,070
Other contingent liabilities	139	59	1,118	128	1,444	1,572	1,009
	594	126	2,266	4,152	7,138	8,456	11,079
Commitments:							
Undrawn formal standby facilities, credit lines and other commitments to lend							
- less than one year	492	—	—	—	492	497	1,990
- one year and over	—	48	27	81	156	350	3,004
Other commitments	273	—	—	—	273	125	712
	765	48	27	81	921	972	5,706

Banking commitments and contingent obligations, which have been entered into on behalf of customers and for which there are corresponding obligations from customers, are not included in assets and liabilities. RBS N.V.'s maximum exposure to credit loss, in the event of non-performance by the other party and where all counterclaims, collateral or security proves valueless, is represented by the contractual nominal amount of these instruments included in the table above. These commitments and contingent obligations are subject to RBS N.V.'s normal credit approval processes.

Contingent liabilities

Guarantees - RBS N.V. gives guarantees on behalf of customers. A financial guarantee represents an irrevocable undertaking that RBS N.V. will meet a customer's obligations to third parties if the customer fails to do so. The maximum amount that RBS N.V. could be required to pay under a guarantee is its principal amount as disclosed in the table above. RBS N.V. expects most guarantees it provides to expire unused.

Other contingent liabilities – these include standby letters of credit, supporting customer debt issues and contingent liabilities relating to customer trading activities such as those arising from performance and customs bonds, warranties and indemnities. In the normal course of business, liabilities and contingent liabilities arise in respect of RBS N.V.'s tax position in the various jurisdictions in which it operates. RBS N.V. makes provision for any liabilities in accordance with its accounting policy for provisions (see page 97). Estimating the financial effect of certain contingent tax liabilities, for which the possibility of any outflow in settlement is remote and not probable, is not practicable.

Also included within contingent liabilities as at 31 December 2014 is €4.0 billion (2013 and 2012 - €4.0 billion) which relates to RBS N.V.'s obligations over liabilities held within the Dutch State acquired businesses included in the new ABN AMRO Bank N.V. On the division of an entity by demerger, Dutch law establishes a cross liability between surviving entities in respect of the creditors at the time of the demerger. RBS N.V.'s cross liability is limited by law to the lower of its equity and the eligible debts of ABN AMRO Bank N.V. on 6 February 2010. The likelihood of any cross liability crystallising is considered remote.

Commitments

Commitments to lend - under a loan commitment RBS N.V. agrees to make funds available to a customer in the future. Loan commitments, which are usually for a specified term may be unconditionally cancellable or may persist, provided all conditions in the loan facility are satisfied or waived. Commitments to lend include commercial standby facilities and credit lines, liquidity facilities to commercial paper conduits and unutilised overdraft facilities.

Other commitments - these include documentary credits, which are commercial letters of credit providing for payment by RBS N.V. to a named beneficiary against presentation of specified documents, forward asset purchases, forward deposits placed and undrawn note issuance and revolving underwriting facilities, and other short-term trade related transactions.

Notes on the consolidated accounts

- After 5 years	19	26	30
Total	62	89	107

Note:

(1) Predominantly property leases

Litigation, arbitration investigations and reviews

RBS N.V. and other members of RBS Group are party to legal proceedings and the subject of investigation and other regulatory and governmental action in the Netherlands, the United Kingdom, the European Union, the United States and other jurisdictions.

RBSH Group recognises a provision for a liability in relation to these matters when it is probable that an outflow of economic benefits will be required to settle an obligation resulting from past events, and a reliable estimate can be made of the amount of the obligation. While the outcome of the legal proceedings, investigations and regulatory and governmental matters in which RBSH Group is involved is inherently uncertain, the directors believe that, based on the information available to them, appropriate provisions have been made in respect of legal proceedings, investigations and regulatory and governmental matters as at 31 December 2014. The future outflow of resources in respect of any matter may ultimately prove to be substantially greater than or less than the aggregate provision that RBSH Group has recognised.

In many proceedings, it is not possible to determine whether any loss is probable or to estimate the amount of any loss. Numerous legal and factual issues may need to be resolved, including through potentially lengthy discovery and document production exercises and determination of important factual matters, and by addressing novel or unsettled legal questions relevant to the proceedings in question, before a liability can be reasonably estimated for any claim. RBSH Group cannot predict if, how, or when such claims will be resolved or what the eventual settlement, damages, fine, penalty or other relief, if any, may be, particularly for claims that are at an early stage in their development or where claimants seek substantial or indeterminate damages.

There are also situations where RBSH Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, or in order to take account of the risks inherent in defending claims or investigations even for those matters for which RBSH Group believes it has credible defences and should prevail on the merits. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The future outflow of resources in respect of any matter may ultimately prove to be substantially greater than or less than the aggregate provision that RBSH Group has recognised for that matter.

RBSH Group may not be directly involved in all of the following litigation, arbitration investigations and reviews but due to the potential implications to RBS Group of such litigation, arbitration investigations and reviews, if a final outcome is adverse to RBS Group it may also have an adverse effect on RBSH Group. Other than those discussed below, no member of RBSH Group is or has been involved in governmental, legal or regulatory proceedings (including those which are pending or threatened) that are expected to be material individually or in aggregate.

Litigation

Madoff

In December 2010, Irving Picard, as trustee for the bankruptcy estates of Bernard L. Madoff and Bernard L. Madoff Investment Securities LLC, filed a clawback claim against RBS N.V. in New York bankruptcy court. In the operative complaint, filed in August 2012, the trustee seeks to recover US\$75.8 million in redemptions that RBS N.V. allegedly received from certain Madoff feeder funds and US\$162.1 million that RBS N.V. allegedly received from its swap counterparties at a time when RBS N.V. allegedly 'knew or should have known of Madoff's possible fraud.' The Trustee alleges that those transfers were preferences or fraudulent conveyances under the US bankruptcy code and New York law and he asserts the purported right to claw them back for the benefit of Madoff's estate. A further claim, for US\$21.8 million, was filed in October 2011. This matter is subject to pre-discovery motions to dismiss the claims against RBS N.V..

London Interbank Offered Rate (LIBOR)

Certain members of RBS Group have been named as defendants in a number of class actions and individual claims filed in the US with respect to the setting of LIBOR and certain other benchmark interest rates. The complaints are substantially similar and allege that certain members of RBS Group and other panel banks individually and collectively violated various federal laws, including the US commodities and antitrust laws, and state statutory and common law, as well as contracts, by manipulating LIBOR and prices of LIBOR-based derivatives in various markets through various means.

Notes on the consolidated accounts

Most of the USD LIBOR-related actions in which RBS Group companies are defendants, including all purported class actions relating to USD LIBOR, have been transferred to a coordinated proceeding in the United States District Court for the Southern District of New York. In the coordinated proceeding, consolidated class action complaints were filed on behalf of (1) exchange-based purchaser plaintiffs, (2) over-the-counter purchaser plaintiffs, and (3) corporate debt purchaser plaintiffs. In orders dated 29 March 2013 and 23 June 2014, the Court dismissed plaintiffs' antitrust claims and claims under RICO (Racketeer Influenced and Corrupt Organizations Act), but declined to dismiss (a) certain Commodities Exchange Act claims on behalf of persons who transacted in Eurodollar futures contracts and options on futures contracts on the Chicago Mercantile Exchange (on the theory that defendants' alleged persistent suppression of USD LIBOR caused loss to plaintiffs), and (b) certain contract and unjust enrichment claims on behalf of over-the-counter purchaser plaintiffs who transacted directly with a defendant. Over 35 other USD LIBOR-related actions involving RBS Group, including purported class actions on behalf of lenders and mortgage borrowers, are subject to motions to dismiss that are being litigated. Discovery has been stayed in all cases in the co-ordinated proceeding pending further order from the Court. On 21 January 2015, the U.S. Supreme Court held in *Geboim v. Bank of America Corp.* that plaintiffs in the class action on behalf of corporate debt purchasers do not need to wait until there is a final judgment in the coordinated proceeding before they can appeal the dismissal of their antitrust claims to the United States Court of Appeals for the Second Circuit.

Certain members of RBS Group have also been named as defendants in class actions relating to (i) JPY LIBOR and Euroyen TIBOR (the "Yen action"), (ii) Euribor, and (iii) Swiss Franc LIBOR, all three of which are pending in the United States District Court for the Southern District of New York. On 28 March 2014, the court in the Yen action dismissed the plaintiffs' antitrust claims, but refused to dismiss their claims under the Commodity Exchange Act for price manipulation.

Details of LIBOR investigations and their outcomes affecting RBS Group are set out under 'Investigations and reviews' on page 149.

Complex Systems

As previously disclosed, RBS N.V. was a defendant in an action heard in the United States District Court for the Southern District of New York filed by Complex Systems, Inc (CSI). The plaintiff alleged that RBS N.V. had since late 2007 been using the plaintiff's back-office trade finance processing software without a valid licence, in violation of the US Copyright Act. RBS N.V. and CSI have reached a settlement of the action, and RBS N.V. has paid the agreed settlement sum to CSI. This brings an end to the proceedings and provides RBS Group companies with an on-going, perpetual licence to use the software at issue.

World Online

In November 2009, the Supreme Court in the Netherlands issued a declaratory judgment against World Online International N.V. (World Online), Goldman Sachs International and ABN AMRO Bank N.V. (now RBS N.V.) in relation to claims arising out of the World Online initial public offering of 2000. It held that these defendants had committed certain wrongful acts in connection with the initial public offering. The judgment did not establish liability or the amount of any loss. The defendant banks have paid settlement sums to certain investors.

The potential claim that was brought to RBSH Group's attention in December 2011 was issued in June 2014. It is on behalf of a group of individuals linked to a company acquired by World Online in 2000. RBSH Group does not believe that such settlements or any final liability or loss will have a material adverse effect on RBSH Group's financial position or profitability.

CPDO Litigation

CPDO claims have been served on RBS N.V. in England, the Netherlands and Australia, and on RBS Group in England relating to the sale of a type of structured financial product known as a constant proportion debt obligation (CPDO). In November 2012, the Federal Court of Australia issued a judgment against RBS N.V. and others in one such case, holding that RBS N.V. and others committed certain wrongful acts in connection with the rating and sale of the CPDO. In March 2013, RBS N.V. was ordered to pay A\$19.7 million. RBS N.V. appealed this decision and the appeal court found against RBS N.V. in May 2014. The decision is not being further appealed. RBS N.V. made the required payments totalling A\$19.7 million in March and April 2013. The judgment may potentially have significance to the other claims served and to any future similar claims.

RiverCity

In 2005 RBS Group (Australia) Pty Ltd ("RBSGA"), previously ABN AMRO Australia Pty Limited, a member of RBSH Group, was a member of a consortium that appointed AECOM Australia Pty Ltd (formerly known as Maunsell Australia Pty Ltd) ("AECOM") to forecast traffic for the Clem7 Tunnel in Brisbane, Australia. Three sets of proceedings have been brought against AECOM.

The first (*Hopkins v AECOM*) is a class action relating to the initial public offer of units to retail investors in the RiverCity Motorway Group, which operated the Clem7 Tunnel. The claim relates to allegations that the IPO disclosure was defective, particularly in relation to traffic volume forecasts by AECOM. The second and third proceedings (*RiverCity v AECOM* and *Portigon v AECOM*), involve claims of negligent misstatement and misleading or deceptive conduct in the issuance of traffic forecasts. In all three proceedings AECOM filed a number of cross-claims for contribution in the event it is found liable, including against RBSGA. On 18 July 2014, the court refused to allow the cross-claims to proceed, except in the case of *Hopkins v AECOM*. Discovery is underway.

Credit Default Swap Antitrust Litigation

Certain members of RBS Group, as well as a number of other financial institutions, are defendants in a consolidated antitrust class action pending in the U.S. District Court for the Southern District of New York. The plaintiffs generally allege that defendants violated the U.S. antitrust laws by restraining competition in the market for credit default swaps through various means and thereby causing inflated bid-ask spreads for credit default swaps. On 4 September 2014, the Court largely denied the defendants' motion to dismiss this matter. Discovery is underway.

Notes on the consolidated accounts

26 Memorandum items continued

Fondazione Monte dei Paschi di Siena

A claim for € 285.9 million was brought by Fondazione Monte dei Paschi di Siena (FMPS) in July 2014 against former directors and 13 syndicate banks, including RBS N.V., in connection with an Italian law-governed term facility agreement for € 600 million dated 4 June 2011. The claim is a civil action based on a non-contractual liability arising from the alleged breach of the by-laws of FMPS which set a 20 percent limit for its debt to equity ratio (the Ratio). The lenders are alleged to have aided and abetted the former directors of FMPS to breach the Ratio. It is alleged that as sophisticated financial institutions, each lender should have known FMPS's financial situation, including its debt to equity ratio, and that putting the facility in place would cause it to breach the Ratio. RBS N.V. will defend the claim and the first hearing is scheduled for 14 May 2015.

Freeman v. HSBC Holdings PLC

On 10 November 2014, RBS N.V. and certain other financial institutions (HSBC, Barclays, Standard Chartered, Credit Suisse, and Bank Saderat) were named as defendants in a complaint filed by a number of United States nationals (or their estates, survivors, or heirs), most of whom are or were United States military personnel, who were killed or injured in more than 70 attacks in Iraq between 2004 and 2011. The attacks were allegedly perpetrated by Hezbollah and certain Iraqi terror cells allegedly funded by the Islamic Republic of Iran. According to the complaint, RBS N.V. and the other defendants are liable for damages arising from the attacks because they allegedly conspired with Iran and certain Iranian banks to assist Iran in transferring money to Hezbollah and the Iraqi terror cells, in violation of the U.S. Antiterrorism Act, by agreeing to engage in "stripping" of transactions initiated by the Iranian banks so that the Iranian nexus to the transactions would not be detected.

On 2 April 2015, the plaintiffs filed an amended complaint adding Commerzbank as an additional defendant. The defendants will move to dismiss the case on a schedule to be determined.

Arbitration

Greek Bonds

RBS N.V. and ABN AMRO Bank N.V. are in dispute over the ownership of economic exposure to certain Greek bonds. ABN AMRO Bank N.V. has indicated that it will commence arbitration proceedings, claiming approximately €70 million, against RBS N.V. in the near term.

Investigations and reviews

RBSH Group's businesses and financial condition can be affected by the fiscal or other policies and actions of various governmental and regulatory authorities in the Netherlands, the United Kingdom, the EU, the United States and elsewhere. RBSH Group has engaged, and will continue to engage, in discussions with relevant governmental and regulatory authorities, including in the United Kingdom, the EU, the United States and elsewhere, on an ongoing and regular basis regarding operational, systems and control evaluations and issues including those related to compliance with applicable laws and regulations, including consumer protection, competition, anti-bribery, anti-money laundering and sanctions regimes. It is possible that any matters discussed or identified may result in investigatory or other action being taken by governmental and regulatory authorities, increased costs being incurred by RBSH Group, remediation of systems and controls, public or private censure, restriction of RBSH Group's business activities or fines.

Any of the events or circumstances mentioned below could have a material adverse effect on RBSH Group, its business, authorisations and licences, reputation, results of operations or the price of securities issued by it. RBSH Group is co-operating fully with the investigations and reviews described below.

LIBOR, other trading rates and foreign exchange trading

In February 2013 RBS Group announced settlements with the Financial Services Authority (FSA) in the United Kingdom, the United States Commodity Futures Trading Commission and the United States Department of Justice (DOJ) in relation to investigations into submissions, communications and procedures around the setting of LIBOR. RBS Group agreed to pay penalties of £87.5 million, US\$325 million and US\$150 million to these authorities respectively to resolve the investigations. As part of the agreement with the DOJ, RBS plc entered into a Deferred Prosecution Agreement (DPA) in relation to one count of wire fraud relating to Swiss Franc LIBOR and one count for an antitrust violation relating to Yen LIBOR. On 17 April 2015, following expiry of the DPA, the DOJ filed a motion seeking dismissal of the criminal information underlying the DPA. On 21 April 2015, the U.S. District Court in Connecticut granted the motion and ordered the charges dismissed; as a result, the DPA is of no further effect.

In addition, on 12 April 2013, RBS Securities Japan Limited entered a plea of guilty to one count of wire fraud relating to Yen LIBOR and on 6 January 2014, the US District Court for the District of Connecticut entered a final judgment in relation to the conviction of RBS Securities Japan Limited pursuant to the plea agreement.

In February 2014, RBS Group paid settlement penalties of approximately €260 million and €131 million to resolve investigations by the European Commission (EC) into Yen LIBOR competition infringements and EURIBOR competition infringements respectively.

In July 2014, RBS N.V. and RBS plc entered into an Enforceable Undertaking with the Australian Securities and Investments Commission (ASIC) in relation to potential misconduct involving the Australian Bank Bill Swap Rate. RBS N.V. and RBS plc undertake in the Enforceable Undertaking to (a) comply with existing undertakings arising out of the February 2013 settlement with the United States Commodity Futures Trading Commission as they relate to Australian Benchmark Interest Rates, (b) implement remedial measures with respect to its trading in Australian reference bank bills and (c) appoint an independent compliance expert to review and report on RBS N.V.'s and RBS plc's implementation of such remedial measures. The remediation measures include ensuring appropriate records retention, training, communications surveillance and trading reviews are in place. As part of the Enforceable Undertaking, RBS N.V. and RBS plc also agreed to make a voluntary contribution of A\$1.6 million to fund independent financial literacy projects in Australia.

Notes on the consolidated accounts

On 21 October 2014, the EC announced its findings that RBS Group and one other financial institution had participated in a bilateral cartel aimed at influencing the Swiss franc LIBOR benchmark interest rate between March 2008 and July 2009. RBS Group agreed to settle the case with the EC and received full immunity from fines for revealing the existence of the cartel to the EC and co-operating closely with the EC's ongoing investigation. Also on 21 October 2014, the EC announced its findings that RBS Group and three other financial institutions had participated in a related cartel on bid-ask spreads of Swiss franc interest rate derivatives in the European Economic Area (EEA). Again, RBS Group received full immunity from fines for revealing the existence of the cartel to the EC and co-operating closely with the EC's ongoing investigation.

RBS Group is co-operating with investigations and new and ongoing requests for information by various other governmental and regulatory authorities, including in the UK, US and Asia, into its submissions, communications and procedures relating to a number of trading rates, including LIBOR and other interest rate settings, and non-deliverable forwards.

RBS Group is providing information and documents to the CFTC and the DOJ as part of an investigation into the setting of USD, EUR and GBP ISDAFIX and related trading activities. RBS Group is also under investigation by competition authorities in a number of jurisdictions stemming from the actions of certain individuals in the setting of LIBOR and other trading rates, as well as interest rate-related trading. At this stage, RBS Group cannot estimate reliably what effect, if any, the outcome of these investigations may have on RBS Group.

Foreign exchange related investigations

In November 2014, RBS plc reached a settlement with the FCA in the United Kingdom and the United States Commodity Futures Trading Commission (CFTC) in relation to investigations into failings in the bank's Foreign Exchange businesses within its Corporate & Institutional Banking (CIB) segment. RBS plc agreed to pay penalties of £217 million to the FCA and \$290 million to the CFTC to resolve the investigations. Payment of the fines was made on 19 November 2014.

As previously disclosed, RBS Group remains in discussions with other governmental and regulatory authorities on similar issues relating to failings in the bank's Foreign Exchange business within its CIB segment. These include advanced settlement discussions regarding the criminal investigation being conducted by the DOJ and certain other financial regulatory authorities and RBS Group expects that it will incur financial penalties in conjunction with any such settlements. The timing and final amounts of any settlements and related litigation risks and consequences remain uncertain and could be material.

On 21 July 2014, the Serious Fraud Office announced that it was launching a criminal investigation into allegations of fraudulent conduct in the foreign exchange market, apparently involving multiple financial institutions.

Governance and risk management consent order

In July 2011, RBS Group agreed with the Board of Governors of the Federal Reserve System, the New York State Banking Department, the Connecticut Department of Banking, and the Illinois Department of Financial and Professional Regulation to enter into a consent Cease and Desist Order (Governance Order) to address deficiencies related to governance, risk management and compliance systems and controls in RBS plc and RBS N.V. branches. In the Governance Order, RBS Group agreed to create the following written plans or programmes:

- a plan to strengthen board and senior management oversight of the corporate governance, management, risk management, and operations of RBS Group's U.S. operations on an enterprise-wide and business line basis;
- an enterprise-wide risk management programme for RBS Group's U.S. operations;
- a plan to oversee compliance by RBS Group's U.S. operations with all applicable U.S. laws, rules, regulations, and supervisory guidance;
- a Bank Secrecy Act/anti-money laundering compliance programme for the RBS plc and RBS N.V. branches in the U.S. (the U.S. Branches) on a consolidated basis;
- a plan to improve the U.S. Branches' compliance with all applicable provisions of the Bank Secrecy Act and its rules and regulations as well as the requirements of Regulation K of the Federal Reserve;
- a customer due diligence programme designed to reasonably ensure the identification and timely, accurate, and complete reporting by the U.S. Branches of all known or suspected violations of law or suspicious transactions to law enforcement and supervisory authorities, as required by applicable suspicious activity reporting laws and regulations; and
- a plan designed to enhance the U.S. Branches' compliance with OFAC requirements.

Notes on the consolidated accounts

The Governance Order (which is publicly available) identified specific items to be addressed, considered, and included in each proposed plan or programme. RBS Group also agreed in the Governance Order to adopt and implement the plans and programmes after approval by the regulators, to fully comply with the plans and programmes thereafter, and to submit to the regulators periodic written progress reports regarding compliance with the Governance Order. RBS Group has created, submitted, and adopted plans and/or programmes to address each of the areas identified above. In connection with RBS Group's efforts to implement these plans and programmes, it has, among other things, made investments in technology, hired and trained additional personnel, and revised compliance, risk management, and other policies and procedures for RBS Group's U.S. operations. RBS Group continues to test the effectiveness of the remediation efforts undertaken by RBS Group to ensure they are sustainable and meet regulators' expectations. Furthermore, RBS Group continues to work closely with the regulators in its efforts to fulfil its obligations under the Governance Order, which will remain in effect until terminated by the regulators.

RBS Group may be subject to formal and informal supervisory actions and may be required by its US banking supervisors to take further actions and implement additional remedial measures with respect to these and additional matters. RBS Group's activities in the United States may be subject to significant limitations and/or conditions.

[US dollar processing consent order](#)

In December 2013 RBSG and The Royal Bank of Scotland plc agreed a settlement with the Board of Governors of the Federal Reserve System (Fed), the New York State Department of Financial Services (DFS), and the Office of Foreign Assets Control (OFAC) with respect to The Royal Bank Of Scotland plc's historical compliance with US economic sanction regulations outside the US. As part of the settlement, RBSG and The Royal Bank of Scotland plc entered into a consent Cease and Desist Order with the Fed (US Dollar Processing Order), which remains in effect until terminated by the Fed. The US Dollar Processing Order (which is publicly available) indicated, among other things, that RBSG and The Royal Bank of Scotland plc lacked adequate risk management and legal review policies and procedures to ensure that activities conducted outside the United States comply with applicable OFAC regulations. RBS Group agreed to create an OFAC compliance programme to ensure compliance with OFAC regulations by RBS Group's global business lines outside of the United States, and to adopt, implement, and comply with the programme. Prior to and in connection with the US Dollar Processing Order, RBS Group has made investments in technology, hired and trained personnel, and revised compliance, risk management, and other policies and procedures. RBS Group also agreed in the US Dollar Processing Order (as part of the OFAC compliance programme) to hire an independent consultant to conduct an annual OFAC compliance review of compliance policies and their implementation and an appropriate risk-focused sampling of U.S. dollar payments. . RBS Group appointed the independent consultant on 1st December 2014 and the independent consultant is due to publish the result of its review during the course of Q2 of 2015. In addition, pursuant to requirements of the US Dollar Processing Order, RBS Group has provided the required written submissions, including quarterly updates, in a timely manner.

RBS N.V. had mandatory reserve deposits with central banks of €190 million (2013 - €73 million; 2012 - €165 million).

Notes on the consolidated accounts

30 Segmental analysis

(a) Reportable segments

RBS N.V. is managed primarily by class of business and presents the segmental analysis on that basis. This includes the review of net interest income for each class of business - interest receivable and payable for all reportable segments is therefore presented net. Segments charge market prices for services rendered to other parts of RBS N.V.. The segment measure is operating profit/(loss) before tax.

On 27 February 2014, RBS Group announced the reorganisation of the previously reported operating divisions into three franchises: Personal & Business Banking, Commercial & Private Banking and Corporate & Institutional Banking (CIB). Only CIB, comprising the former Markets and International Banking divisions, is relevant for RBS N.V. CIB is a single reportable segment. RBS N.V.'s reportable segments are as follows:

Corporate & Institutional Banking is the wholesale banking business comprising, Markets and Transaction Services which work closely together to serve customers. The businesses operate internationally providing lending, fixed income, foreign exchange, rates, credit, securitisation and transaction banking services primarily to large UK and international corporates and financial Institutions.

Central Functions comprises corporate functions, such as treasury, finance, risk management, legal, communications and human resources. The Centre manages RBS N.V.'s capital resources and provides services to the operating segments.

RBS Capital Resolution (RCR) became fully operational on 1 January 2014 with a pool of c.£29 billion of RBS Group assets (of which approximately £1.5 billion related to RBS N.V.) with particularly high long-term capital intensity, credit risk and/or potentially volatile outcomes in stressed environments. RCR brings assets under common management and increases focus on managing these assets so as to release capital. No business lines were moved to RCR so comparative data has not been restated

Non-Core was dissolved on 31 December 2013. It managed separately assets that RBS N.V. intended to run off or dispose of. It also included the remaining assets and liabilities in RBSH Group that had not yet been sold, wound down or transferred to the Consortium Members, referred to as 'Shared Assets', in which each of the consortium shareholders has a joint and indirect interest.

Following the implementation of a revised organisational structure in 2014, comparative data has been restated accordingly.

Notes on the consolidated accounts

31 Remuneration of the Managing Board and Supervisory Board Remuneration of the Managing Board

The Managing Board during the year comprised the following members:

- (1) J. de Ruiter.
- (2) J. Kremers (resigned 1 April 2014).
- (3) M. Geslak.
- (4) C. Visscher.
- (5) I. van Eeghen (appointed 18 June 2014).

All current members of the Managing Board also perform roles in their respective fields elsewhere within RBS Group. As a consequence the following table only summarises total remuneration of the members of the Managing Board paid by RBS N.V. in respect of their functions in RBS N.V.. Remuneration has decreased reflecting the reduced time spent by the members on matters relating to RBS N.V. following the transfers to RBS plc from 2011 onwards.

The remuneration of the Managing Board is presented in aggregate in the table below. RBSG and its subsidiaries adhere to relevant statutory requirements and RBS Group discloses individual remuneration of RBS Group executive directors, compliant with the UK PRA Remuneration Code.

	2014 €000	2013 €000
Salaries and short-term benefits	563	722
Pensions	118	231
Termination benefits	—	1,177
Profit sharing and bonus payments	176	196
Long term incentive plan (3)	122	255
Total	979	2,581

Notes:

- (1) There are no loans from RBS N.V. to the Managing Board members.
- (2) RBS N.V. is no longer a Dutch open N.V.
- (3) The vesting of long-term incentive awards in the form of shares in RBS Group will normally be subject to the satisfaction of financial and non-financial performance conditions. The performance conditions will be set by the RBS Group Performance and Remuneration Committee for each award. In addition, awards will only vest to the extent the Committee is satisfied that the vesting outcome reflects underlying financial results and if conduct and risk management during the performance period has been effective.
- (4) One of the tax measures introduced by the Dutch Government is the Dutch wage tax of 16% ('crisisheffing'), payable by the employer for taxable wages above €150,000 per employee. In 2014 this wage tax was no longer applied. In 2013 the wage tax amounted to a total of €105,000 for the Managing Board members

Remuneration of the Supervisory Board

The Supervisory Board during the year comprised the following members:

- (1) E. Stevenson (appointed 11 August 2014).
- (2) C. Campbell.
- (3) S. Hepkema (resigned 1 May 2014).
- (4) H. Rottinghuis (resigned 1 May 2014).
- (5) N. Bostock (resigned 28 May 2014).
- (6) J. Cummins.

The Supervisory Board included members employed elsewhere within RBS Group. The Supervisory Board members from RBS Group were not remunerated for time spent on matters relating to RBS N.V.

The table below provides information on the remuneration of the Supervisory Board in aggregate. Members of the Supervisory Board are not entitled to emoluments in the form of RBSG shares or options on RBSG shares.

	2014 €000	2013 €000
Remuneration	45	140

Notes:

- (1) There are no loans from RBSH Group to the Supervisory Board members.
- (2) RBS N.V. is no longer a Dutch open N.V.

Notes on the consolidated accounts

32 Related parties

RBS N.V. has a related party relationship with associates, joint ventures, key management and shareholders. The UK Government through HM Treasury is the ultimate controlling party of The Royal Bank of Scotland Group plc ('RBS Group') which in turn owns 98% of RFS Holdings B.V., the immediate parent company of RBSH Group. RBS Group is the parent company of RBS N.V.

Parties are considered to be related if one party has the ability to control or exercise significant influence over the other party in making financial or operational decisions. RBS N.V. enters into a number of banking transactions with related parties in the normal course of business. These transactions, which include loans, deposits and foreign currency transactions, have taken place on an arm's length basis. These transactions are carried out on commercial terms and at market rates. Employees are offered preferential terms for certain banking products. No allowances for loan losses have been recognised in respect of loans to related parties in 2014, 2013 and 2012.

Balances with Consortium Members

The transfer of eligible business carried out in the UK, including certain securities issued by RBS N.V. was completed during the last quarter of 2011, the 'UK Transfer', pursuant to Part VII of the UK Financial Services and Markets Act 2000. The UK Transfer moved a large part of the UK Equities & Structured Retail, Markets, Lending and the former GTS businesses as well as part of the UK Non-Core portfolio.

In the first half of 2012, assets and liabilities largely relating to businesses in Singapore, Hong Kong and Kazakhstan were transferred to RBS plc by a combination of local schemes of arrangement, novations and subsidiary share sales.

On 8 August 2012 the Court of Session in Scotland approved the planned transfer of eligible RBS N.V. businesses, including the transfers of certain securities issued by RBS N.V., in the Netherlands and certain EMEA countries to RBS plc on 10 September 2012. The transfer was executed by way of a Dutch statutory demerger (the Demerger) from RBS N.V. into RBS II B.V. (the acquiring company); then onto RBS plc by way of a cross-border merger from RBS II B.V. into RBS plc (the Merger, and together with the Demerger, the Dutch Scheme), after which RBS II B.V. ceased to exist. The Dutch Scheme related largely to Transaction Services business and Lending deals. The Markets business included most Dutch, German and Italian law governed Securitised Products and a number of Over the Counter transactions (OTCs).

Also in the later half of 2012, other eligible businesses in the Netherlands and certain EMEA countries, and businesses in Malaysia, Turkey and the United Arab Emirates were transferred via novations, market mechanisms and subsidiary share sales.

In 2013, assets and liabilities relating to businesses in Russia, Romania, Korea and North America were transferred to RBS plc by a combination of local schemes of arrangement, cross-border merger novations and subsidiary share sales.

During 2014, the Thailand business was transferred to the RBS plc.

RBS N.V. has also entered into two agreements with RBS plc under which it has bought credit protection over the exposures held by RBS N.V. that were subject to RBS Group's Asset Protection Scheme agreement with HM Treasury (HMT). These agreements cover 100% of losses on these assets. One agreement provides protection over a portfolio that includes significant exposure in the form of derivatives; the other covers assets that are measured at amortised cost. The former agreement is accounted for as a credit derivative. The second agreement meets the definition of a financial guarantee contract and is accounted for as such. RBS Group exited the APS effective 18 October 2012. The agreements are not impacted by RBS Group's exit from APS and as a result, there has been no change to these agreements for the year ended the 31 December 2014.

With effect from 1 January 2013, the Managing Board of RBS Holdings N.V. agreed with RBS plc to reduce the number of covered assets included in the agreements as a result of the progress made with the transfers to RBS plc during 2011 and 2012. Unamortised fees relating to the assets previously covered will be reimbursed by RBS plc. The assets covered under the agreement at 31 December 2014 was €1 billion (2013 - €1.0 billion; 2012 - €2.4 billion), with an average remaining maturity of four years. At 31 December 2014 the carrying value of the prepaid fee for the financial guarantee contract was €9 million (2013 - €20 million; 2012 - €145 million).

Financial assets and liabilities positions held-for-trading with RBS Group include positions of which risks have been transferred to RBS plc. The assets and liabilities cannot be offset under IFRS, however master netting agreements are in place that reduce the credit risk in the assets.

Notes on the consolidated accounts

32 Related parties *continued* **Balances with the Dutch State**

Transactions conducted directly with the Dutch State and UK Government are limited to normal banking transactions, taxation and other administrative relationships with the exception of the mandatory convertible securities and guarantee of the Dutch State. In addition RBS N.V. participates in the Dutch State treasuries market and utilises the liquidity support made available to all banks regulated by DNB.

There may be other significant transactions with entities under the common control of or subject to significant influence by the Dutch and/or the UK Government. These would include, amongst others, loans, deposits, guarantees, fee based relationships, or equity holdings. Disclosure is made of any significant transactions with these entities.

33 Post balance sheet events **Strategic review of CIB**

In February 2015, RBS Group announced changes to its Corporate & Institutional Banking (CIB) business to build a stronger, safer and more sustainable business, focused mainly on UK and Western European customers, both corporate and financial institutions, supported by trading and distribution platforms in the UK, US and Singapore. As a consequence, RBS Group will reduce its geographical footprint to approximately 13 countries, compared with 38 at the end of 2014.

As announced, RBS Group are exploring the option of a sale for the countries that are to be exited. If this is not feasible, it is expected that the countries will be wound down. The full impact of the announced changes on RBS N.V. is currently being reviewed.

Under the new structure, the RBS N.V. and its businesses moved to the new Capital Resolution organisation. For 2015, the focus will remain on the further de-risking of our balance sheet.

Sale of International Diamond and Jewellery business

On 10 April 2015 the International Diamond and Jewellery business in India was sold to IndusInd Bank Limited. The sale which includes net assets of approximately €0.5 billion is subject to regulatory approval; the business will be managed by RBS N.V. until completion.

Other than as detailed above, there have been no other significant events between the year end and the date of approval of these accounts which would require a change to or disclosure in the accounts.

Company Financial Statements RBS N.V. (Parent Company) 2014

Accounting policies

The company financial statements of RBS Holdings have been prepared in accordance with the requirements in Title 9 Book 2 of the Dutch Civil Code. RBS N.V. prepares its consolidated financial statements in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU and IFRS as issued by the IASB. The accounting policies applied in the company financial statements are the same as those applied in the consolidated financial statements on pages 95 to 103. RBS Holdings applies the exemption as included in the section 2:362 paragraph 8 of the Netherlands Civil Code. Participating interests in group companies are valued at net asset value determined on the basis of IFRS as issued by the IASB.

Basis of preparation

The financial statements are presented in euros, which is the presentation currency of the company. The income statement has been drawn up in accordance with Section 402, Book 2 of the Netherlands Civil Code.

(3) Includes €13 million relating to gains recycled to profit and loss due to transfers to RBS plc during 2014 (2013 - €20 million; 2012 - €174 million).

Company Financial Statements RBS N.V. (Parent Company) 2014

Loans and advances to banks and Deposits by banks

Loans and deposits and interbank relationships with subsidiary companies are included. The maturity of these loans and receivables is less than one year.

RBS N.V.'s principal subsidiary undertakings and participating interests are shown below.

	Country of incorporation	Group interest
RBS Hollandsche N.V., Rotterdam	The Netherlands	100%
RBS Participaties B.V., Amsterdam	The Netherlands	100%
RBS Ventures II B.V., Amsterdam	The Netherlands	100%
RBS WCS Holding Company, New York	United States of America	100%
The Royal Bank of Scotland (China) Co. Limited, Shanghai	China	100%
RBS Leasing (China) Co. Limited, Beijing	China	100%
RBS Holdings (Australia) Pty Limited, Sydney	Australia	100%
RBS Holdings II (Australia) Pty Limited, Sydney	Australia	100%
RBS Securities (Australia) Pty Limited, Sydney	Australia	100%
Saudi Hollandi Bank, Riyadh ⁽¹⁾	Saudi Arabia	40%

Note:

(1) Participating interests that are not 100% consolidated but are accounted for under the equity method.

All subsidiaries and participating interests operate principally in their country of incorporation.

The list of participating interests for which statements of liability have been issued, has been filed with the Chamber of Commerce in Amsterdam.

Some of RBS N.V. Group's subsidiaries and participating investments are regulated entities and therefore their ability to transfer funds to RBS N.V. is subject to regulatory approvals.

Shareholders' equity

Share capital

There were 11,112 ordinary shares of €4.50 each in issue as at 31 December 2014, 2013 and 2012.

Reserves

	2014 €m	2013 €m	2012 €m
Share premium account	1,639	1,403	2,150

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS AND SUPERVISORY BOARD OF THE ROYAL BANK OF SCOTLAND N.V.

Opinion on the financial statements of The Royal Bank of Scotland N.V.

We have audited the 2014 financial statements of The Royal Bank of Scotland N.V. ("RBS N.V.") based in The Netherlands. The financial statements include the consolidated financial statements and the company financial statements.

In our opinion:

- the consolidated financial statements give a true and fair view of the financial position of RBS N.V as at 31 December 2014 and of its result and its cash flows for the year ended 31 December 2014 in accordance with International Financial Reporting Standards as adopted by the European Union (EU-IFRS) and Part 9 of Book 2 of the Dutch Civil Code.
- the company financial statements give a true and fair view of the financial position of RBS N.V as at 31 December 2014, and of its results for the year ended 31 December 2014 in accordance with Part 9 of Book 2 of the Dutch Civil Code.
-

What we have audited

The consolidated financial statements comprise the consolidated statement of the financial position as at 31 December 2014, the consolidated income statement, the consolidated statements of comprehensive income, changes in equity and cash flows; and the notes comprising a summary of the significant accounting policies and other explanatory information. The company financial statements comprise: the company balance sheet as at 31 December 2014; the company income statement and statement of changes in equity for 2014; and the notes comprising a summary of the significant accounting policies and other explanatory information.

Basis for our opinion

We conducted our audit in accordance with Dutch law, including the Dutch Standards on Auditing. Our responsibilities under those standards are further described in the "Respective responsibilities of the managing board, supervisory board and auditor" section of our report.

We are independent of RBS N.V in accordance with the Verordening inzake de onafhankelijkheid van accountants bij assurance-opdrachten (ViO) and other relevant independence regulations in the Netherlands. Furthermore we have complied with the Verordening gedrags- en beroepsregels accountants (VGBA).

We believe the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

The key audit matters described below are those matters which, in our professional judgement, were of most significance in our audit of the financial statements. We have communicated these key audit matters to the supervisory board. The key audit matters are not a comprehensive reflection of all matters discussed.

Other information

Risk

Loan Impairment Provisions

The managing board members need to exercise significant judgement when determining both when and how much to record as loan impairment provisions. Because of the significance of this judgement and the size of loans and advances in the context of the RBS N.V. balance sheet, the audit of loan impairment provisions is a key area of focus. At 31 December the gross loans and advances were €11,200 million against which loan impairment provisions of €114 million were recorded. The basis of the provisions is summarised in the accounting policies and in note 11 of the financial statements.

As set out in accounting policies, RBS N.V. uses one of three methods to assess the amount of impairment provisions required:

- For the larger, individually significant loans and advances, impairments are assessed on an individual basis. These are largely in the Corporate and Institutional Banking and RBS Capital Resolution ("RCR") segments; and
- Latent loss provisions are held against losses that have been incurred but are not observable at the year-end. Latent provisions are held against loans and advances across all customer segments and RCR and calculated using models based on probabilities of default and loss given defaults as well as emergence periods between the impairment event occurring and an individual or collective impairment being recognised.

Where applicable, the impact of forbearance is assessed individually or on a portfolio basis.

The most significant judgements arise on the impairments recorded against the loans and advances in RCR. As a result of the strategy to exit the RCR assets, the valuation of loans in RCR is particularly sensitive to changes in market conditions. During the year, €8 million was released in RCR impairment provisions following improvements in economic and market conditions, and the realisation of collateral at greater than anticipated amounts together with increases in the valuation of collateral held on assets not disposed.

Valuation of complex or illiquid financial instruments

The valuation of RBS N.V.'s financial instruments was a key area of focus of our audit given the degree of complexity involved in valuing some of the financial instruments and the significance of the judgements and estimates made by the managing board members. As set out in note 8 of the financial statements, financial instruments held at fair value comprised assets of €4.4 billion and liabilities of €4.0 billion. In RBS N.V.'s accounting policies, the managing board members have described the key sources of estimation involved in determining the valuation of financial instruments and in particular when the fair value is established using a valuation technique due to the instrument's complexity or due to the lack of availability of market-based data.

Our audit has focused on testing the valuation adjustments including those for credit risk and own credit. A particular area of focus of our audit has been in testing the valuation of the more illiquid financial instruments disclosed as level 3 instruments which comprised assets of €0.2 billion and liabilities of €0.2 billion.

How the scope of our audit responded to the risk

We tested the design and operating effectiveness of the key controls to determine which loans and advances are impaired and the required provisions against those assets. These included testing:

- System-based and manual controls over the timely recognition of potential problem loans and advances;
- Controls over the impairment calculation models; and
- Governance controls, including attending key meetings that form part of the approval process for loan impairment provisions.

We tested a sample of loans and advances to assess whether impairment events had been identified in a timely manner.

For the latent impairment models used by RBS N.V., we tested a sample of the data used in the models as well as testing the calculations within the models. We assessed whether the modelling assumptions used considered all relevant risks, and whether the additional overlays to reflect those risks not included in the models, were reasonable in light of historic experience, economic climate, current operational processes and the circumstances of the customers. We also tested the extraction, from underlying systems, of historic data used in the models.

For the larger loans where individual provisions are determined, we selected a sample of loans and tested the calculation of the future expected cash flows from customers and, where applicable, from realisation of collateral held. This work involved assessing the work performed by the Bank's external experts used by RBS N.V. to value the collateral or to assess the estimates of the borrowers' future cash flows. In some cases we used our own industry experts, to assess the appropriateness of valuations and estimates used by RBS N.V.

We tested the design and operating effectiveness of the key controls in RBS N.V.'s financial instrument valuation processes including the controls over data feeds and other inputs into valuation models and the controls over testing and approval of new models or changes to existing models.

Our audit work also included testing a sample of the underlying valuation models and the assumptions used in those models using a variety of techniques. This included valuing a sample of financial instruments using independent models and source data and comparing the results to RBS N.V.'s valuations and the investigation of any significant differences.

For instruments with significant, unobservable valuation inputs, we used our own internal valuation experts to assess and challenge the valuation assumptions used, including considering alternative valuation methodologies used by other market participants.

Other information

Risk	How the scope of our audit responded to the risk
<p>Conduct & litigation exposures</p> <p>In note 26 of the financial statements the managing board members have summarised the most significant legal proceedings, investigations and other regulatory and government actions RBS N.V. is currently involved in. The recognition and measurement of provisions and the measurement and disclosure of contingent liabilities in respect of litigation, customer remediation and regulatory investigations requires significant judgement and as a result is a key area of focus in our audit. As set out in the accounting policies, judgement is needed to assess whether:</p> <ul style="list-style-type: none"> • An obligation exists at 31 December 2014; • It is likely that an economic outflow (for example, a payment) is likely; and • The amount of the payment (or other economic outflow) can be estimated reliably. <p>At 31 December 2014 RBS N.V. held provisions for liabilities and charges totalling €126 million and including conduct and litigation claims totalling €47 million. We focused our work on the recognition, measurement and disclosure of litigation and regulatory actions relevant to RBS N.V..</p>	<p>We tested the design and operating effectiveness of RBS N.V.'s key controls over the identification, recording and disclosure of exposures. The controls tested included those over the timely identification of exposures; the completeness and accuracy of data used in any models; and the calculation of the provision and disclosure of exposures in accordance with the relevant accounting standards.</p> <p>We challenged the adequacy of provisions recognised by critically assessing the key assumptions used in the provision models, comparing the assumptions to available peer and historic data. This work also included, amongst other things, reviewing regulatory correspondence and RBS N.V.'s complaint logs.</p> <p>We assessed the legal advice and correspondence with regulators received in connection with legal proceedings, investigations and regulatory matters which RBS N.V. is party to. For the more material matters, we also met with the Bank's external legal counsel.</p> <p>We also assessed the disclosures provided on conduct and litigation exposures in order to determine whether the disclosures were sufficiently clear about the uncertainties that existed in relation to the contingent liabilities and provisions recognised, including the sensitivity of the provisions to changes in the underlying assumptions.</p>
<p>IT access rights</p> <p>The widespread reliance on information systems within the Bank means that the controls over access rights are critical. In 2014 and in previous years management identified a number of deficiencies in the controls over the provision of access to IT application systems and system databases which increased the risk that individuals had inappropriate access. For the IT application systems and databases that support financial reporting, the existence of these deficiencies means there is an increased risk that the data and reports from the affected systems and databases are not reliable.</p>	<p>We tested the design and operating effectiveness of RBS N.V.'s controls over the information systems that are critical to financial reporting and identified weaknesses in the access controls.</p> <p>Where these deficiencies affected applications and databases within the scope of our audit we performed a combination of controls and substantive testing including the following, in order to determine whether we could place reliance on the completeness and accuracy of system generated information:</p> <ul style="list-style-type: none"> • Determined whether unauthorised or inappropriate changes had been made to the affected databases and IT application systems; and • Assessed the design and operating effectiveness of any controls that mitigated the identified risks. <p>In addition and where appropriate we extended the scope of our substantive audit procedures.</p>

Other information

The description of the risks above should be read in conjunction with the significant issues considered by the supervisory board discussed on pages 75 to 77.

Our audit procedures relating to these matters were designed in the context of our audit of the financial statements as a whole, and not to express an opinion on individual accounts or disclosures. Our opinion on the financial statements is not modified with respect to any of the risks described above, and we do not express an opinion on these matters.

Our Application of Materiality

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements. The materiality affects the nature, timing and extent of our audit procedures and the evaluation of the effect of identified misstatements on our opinion.

Based on our professional judgement we determined the materiality for the financial statements as a whole at € 50million (2013 € 50 million). The materiality is based on 1.4% of shareholders' equity at 31 December 2014. We have also taken into account misstatements and/or possible misstatements that in our opinion are material for the users of the consolidated financial statements for qualitative reasons.

We agreed with the supervisory board that misstatements in excess of €2.5million, which are identified during the audit, would be reported to them, as well as smaller misstatements that in our view must be reported on qualitative grounds.

An overview of the scope of our audit

RBS N.V., a fully operational bank within RBS N.V. Group. RBS N.V. is independently rated and regulated by the Dutch Central Bank. The financial information of this entity is included in the consolidated financial statements of RFS Holdings BV and ultimately RBS Group plc.

We determined the scope of our audit by first considering the internal organisation of the RBS N.V. Group and then identifying the components of the audit that have most significance to the financial statements. The significant components of our audit are consistent with the operating segments identified in the financial statements comprising Corporate & Institutional Banking, RCR and the central functions of the Group including Treasury and Services. Full scope audits were performed 3 countries, and a further 3 countries were subject to an audit of specified account balances or specified audit procedures where the extent of our testing was based on our assessment of the risks of material misstatement and of the materiality of RBS N.V.'s operations at those locations.

The group audit team sent component auditors detailed instructions on audit procedures to be undertaken and the information to be reported back to the group audit team. Regular contact was maintained throughout the course of the audit with key component auditors including holding group planning meetings, regular communications on the status of the audits and a programme of planned visits was followed that was designed so that the Senior Statutory Auditor or another senior member of the group audit team visited each significant component audit team a number of times during the year.

By performing the procedures mentioned above we have been able to obtain sufficient and appropriate audit evidence about the financial information of the RBS NV Group to provide an opinion about the consolidated financial statements.

Matters on which we are required to report by exception

Pursuant to legal requirements of Part 9 of Book 2 of the Dutch Civil Code (concerning our obligation to report about the management board report and other information):

- We have no deficiencies to report, as a result of our examination, on whether the management board report, to the extent we can assess, has been prepared in accordance with Part 9 of Book 2 of the Dutch Civil Code, and whether the information as required by Part 9 of Book 2 of the Dutch Civil Code has been annexed.
- We report that the management board report, to the extent we can assess, is consistent with the financial statements.

Respective responsibilities of the managing board, supervisory board and auditor

The managing board is responsible for the preparation and fair presentation of the financial statements in accordance with EU-IFRS and Part 9 of Book 2 of the Dutch Civil Code, and for the preparation of the management board report in accordance with Part 9 of Book 2 of the Dutch Civil Code. Furthermore, management is responsible for such internal control as management determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.

As part of the preparation of the financial statements, management is responsible for assessing the company's ability to continue as a going concern. Based on the financial reporting frameworks mentioned, management should prepare the financial statements using the going concern basis of accounting unless management either intends to liquidate the company or to cease operations, or has no realistic alternative but to do so. Management should disclose events and circumstances that may cast significant doubt on the company's ability to continue as a going concern in the financial statements.

The supervisory board is responsible for overseeing the company's financial reporting process.

Other information

We have been auditor of the RBS N.V. Group since 2010. We were re-appointed as auditor of the RBS N.V. Group for the 2014 year end by the Supervisory Board on 12 January 2015.

Our objective is to plan and perform the audit assignment in a manner that allows us to obtain sufficient and appropriate audit evidence for our opinion.

Our audit has been performed with a high, but not absolute, level of assurance, which means we may not have detected all errors and fraud.

We have exercised professional judgment and have maintained professional scepticism throughout the audit, in accordance with Dutch Standards on Auditing, ethical requirements and independence requirements. Our audit included:

- Identifying and assessing the risks of material misstatement of the financial statements, whether due to fraud or error, designing and performing audit procedures responsive to those risks, and obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtaining an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control.
- Evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Concluding on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the company to cease to continue as a going concern.
- Evaluating the overall presentation, structure and content of the financial statements, including the disclosures; and
- Evaluating whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with the supervisory board regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant findings in internal control that we identify during our audit.

We provide the supervisory board with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the supervisory board, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, not communicating the matter is in the public interest.

Ronald Koppen
For and on behalf of Deloitte Accountants B.V.
Netherlands

Other information

Articles of association

The description set out below is a summary of the material information relating to the Company's share capital, including summaries of certain provisions of the Articles of Association and applicable Dutch law in effect at the relevant date. The Articles of Association of RBS N.V. were last amended by a notarial deed executed by Mr B.J. Kuck, civil law notary in Amsterdam on 5 April 2013, under register entry number 33002587.

As stated in the Articles of Association the object of the Company is:

- The participation in, collaboration with and financing, administration and management of other enterprises and companies and the performance of all acts, activities and services which are related or may be conducive thereto.
- The engagement in banking and stockbroking activities, the management of third party assets, acting as trustee, administrator, executor of wills and executive director, non-executive director or liquidator of companies or other organisations, the provision of insurances and the performance of all other acts and activities which are related or may be conducive thereto, all in the broadest possible sense.
- The fostering of the direct and indirect interests of all those who are involved in any way in the Company and the safeguarding of the continuity of the Company and its affiliated enterprise(s).

Profit appropriation

Profit is appropriated in accordance with article 37 of the articles of association. The main stipulations with respect to shares currently in issue are as follow:

The Managing Board may decide to make appropriations to reserves, subject to the approval of the Supervisory Board (article 37.2.a.).

The allocation of the amount remaining after these appropriations shall be determined by the General Meeting of Shareholders. The Managing Board, subject to the approval of the Supervisory Board, shall make a proposal to that effect. A proposal to pay a dividend shall be dealt with as a separate agenda item at the General Meeting of Shareholders (article 37.2.a.).

RBS N.V.s' policy on reserves and dividends shall be determined and can be amended by the Supervisory Board, upon the proposal of the Managing Board. The adoption of and each subsequent amendment to the policy on reserves and dividends shall be discussed and accounted for at the General Meeting of Shareholders under a separate agenda item (article 37.2.b.).

Subject to approval of the Supervisory Board, the Managing Board may make the dividend or interim dividend on the shares payable, at the discretion of the holders, either in cash or, provided it is authorised to issue shares, partly or wholly in shares in the Company's capital or in a combination thereof, such combination to be determined by the Managing Board (article 37.3.).

Subject to the approval of the Supervisory Board, the Managing Board shall be authorised, in so far as such is permitted by the profit as evidenced by an interim balance sheet drawn up with due observance of the provisions of Section 105, Subsection 4 of Book 2 of the Netherlands Civil Code, to make payable an interim dividend on the shares once or more frequently in the course of any financial year and prior to the approval of the Annual Accounts by the General Meeting of Shareholders (article 37.4.).

Subject to the approval of the Supervisory Board, the Managing Board may decide on a distribution charged against reserves in cash or, if the Board is authorised to issue shares, in the form of shares (article 37.5.).

Proposed profit appropriation

Appropriation of net profit pursuant to articles 37.2 and 37.3 of the articles of association:

	2014 €m	2013 €m	2012 €m
Release from reserves	(100)	(135)	(999)

Other information

Shares and voting rights

Each ordinary share of €0.56 face value in the capital of the Company entitles the holder to cast one vote (art 32.1). Subject to certain exceptions provided for by law or in the Articles of Association, resolutions are passed by an absolute majority of the votes cast (art. 32.4).

When shares are issued, each holder of shares shall have pre-emptive right, in proportion to the aggregate amount of their shares, except in the case of an issue of shares for a consideration other than in cash or an issue of shares to employees of the company or of a group company (art.9).

In the event of the dissolution and liquidation of the Company, the assets remaining after payment of all debts will be distributed to the shareholders of ordinary shares on a pro-rata basis (art 39.3).

Relations with shareholders

Rights of shareholders

Any resolution to amend the Articles of Association or dissolve RBS N.V may only be passed by the General Meeting of Shareholders following a proposal by the Managing Board which has been approved by the Supervisory Board. A copy of the proposal containing the literal text of the proposed amendments shall be made available for inspection by the holders of shares of RBS N.V at the offices of RBS N.V. and at the offices stated in the convocation to the meeting, from the day of convocation to the end of the Meeting. Each Shareholder may obtain a full copy of the proposal free of charge.

Meetings of shareholders and convocation

General meetings of shareholders shall be held in Amsterdam, or in The Hague, Rotterdam, Utrecht or Haarlemmermeer (Schiphol). Annual General Meeting of Shareholders must be held within six months of the end of each financial year. In addition, General meetings of shareholders shall be held as frequently as deemed necessary by the Managing Board or the Supervisory Board and when required by law or by the Articles of Association. General meetings of shareholders shall be convened by the Managing Board or the Supervisory Board, without prejudice to the provisions of Sections 110, 111 and 112 of Book 2 of the Netherlands Civil Code. Convocation shall take place not later than on the fifteenth day prior to the day of the meeting. Convocation shall state the items to be discussed or alternatively notice shall be given that such items may be inspected at the company's offices.

Proposals to amend the Articles of Association or proposals relating to a reduction of the company's capital shall always be included in the actual convocation.

Post balance sheet events

There have been no significant events between the year end and the date of approval of these accounts which would require a change to or disclosure in the accounts.

Incorporation and registration

RBS N.V. is the parent company of the RBS N.V. consolidated group of companies. RBS N.V. is a public limited liability company, incorporated under Dutch law on 7 February 1825, and registered at Gustav Mahlerlaan 350, 1082 ME Amsterdam, the Netherlands and is entered in the Trade Register of the Amsterdam Chamber of Commerce under no 33002587.

Code of conduct

The code of conduct applies to everyone who works for RBS N.V.

It promotes honest and ethical conduct, including the handling of actual or apparent conflicts of interest between personal and professional relationships. RBS N.V. recognises that personal conduct, business integrity and the Group's security are crucial, and the code of conduct serves to inform those who work for us of the Group's expectations of their behaviour and practices.

The code of conduct is available on the RBS Group's website www.rbs.com and will be provided to any person without charge, upon request, by contacting Company Secretariat at the telephone number listed on page 192.

*restated

Notes:

(1) Dividend payout ratio represents dividends declared on a per share basis as a percentage of net (loss)/profit attributable to ordinary shareholders.

(2) Return on average total assets represents profit for the year as a percentage of average total assets. Negative ratios have been excluded.

(3) Return on average ordinary shareholders' equity represents profit attributable to ordinary shareholders expressed as a percentage of average ordinary shareholders' equity. Negative ratios have been excluded.

(4) For this purpose, earnings consist of income before tax plus fixed charges. Fixed charges consist of total interest expense, including or excluding interest on deposits. Deposits include banks and total customer accounts. The coverage deficiency for total fixed charges excluding interest on deposits for the year ended 31 December 2014 is €57 million (2013 - €142 million; 2012 - €887 million and 2011 - €186 million).

Note:

(1) RBS N.V. provides credit facilities at variable rates to its corporate customers. Variable rate credit extended to RBS N.V.'s corporate and commercial customers includes bullet and instalment loans, finance lease agreements and overdrafts; interest is generally charged at a margin over a benchmark rate such as EURIBOR, LIBOR or base rate. Interest on variable rate retail loans may also be based on EURIBOR, LIBOR or base rate. RBS N.V. does not provide interest only loans to its retail customers.

Forbearance

The table below shows loans whose terms were subject to forbearance during the year that are unimpaired: either the loan was performing both before and after or it was non-performing before and subsequently transferred to the performing book. Loans subject to forbearance with impairment provisions continue to be reported as impaired loans.

	2014 €m	2013 €m	2012 €m	2011 €m	2010 €m
Forbearance loans (1)	7	—	—	194	438

Note:
(1) Loans subjected to forbearance include only those arrangements above thresholds set individually by the segments, ranging from nil to €10 million.

Additional information

Financial summary continued

Risk elements in lending and potential problem loans

Risk elements in lending (REIL) comprises impaired loans and accruing loans past due 90 days or more as to principal or interest.

Impaired loans are all loans (including forbearance loans) for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans.

Accruing loans past due 90 days or more comprise loans past due 90 days where no impairment loss is expected.

	2014 €m	2013 €m	2012 €m	2011 €m	2010 €m
Impaired loans (1)					
Domestic	130	178	253	339	445
Foreign	73	132	253	1,591	1,719
Total	203	310	506	1,930	2,164
Accruing loans which are contractually overdue 90 days or more as to principal or interest					
Domestic	—	—	—	78	51
Foreign	—	—	—	89	9
Total	—	—	—	167	60
Total REIL	203	310	506	2,097	2,224
Closing provisions for impairment as a % of total REIL	56.2%	62.6%	67.4%	75.0%	70.7%
REIL as a % of gross lending to customers	5.6%	7.9%	7.5%	6.8%	4.8%

Note:

(1) The write off of impaired loans affects the closing provisions for impairment as a % of total risk elements in lending (the coverage ratio). The coverage ratio reduces if the loan written off carries a higher than average provision and increases if the loan written off carries a lower than average provision. There were no Impaired loans at 31 December 2014 whose terms were subject to forbearance (2013 - nil; 2012 - €27 million).

	2014 €m	2013 €m	2012 €m	2011 €m	2010 €m
Gross income not recognised but which would have been recognised under the original terms of impaired loans					
Domestic	23	24	20	80	64
Foreign	8	22	34	85	325
	31	46	54	165	389

Potential problem loans

Potential problem loans (PPL) are loans for which an impairment event has taken place but no impairment loss is expected. This category is used for advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

	2014 €m	2013 €m	2012 €m	2011 €m	2010 €m
Potential problem loans	10	9	27	220	133

Both REIL and PPL are reported gross and take no account of the value of any security held which could reduce the eventual loss should it occur, nor of any provision marked. Therefore impaired assets which are highly collateralised, such as mortgages, will have a low coverage ratio of provisions held against the reported impaired balance.

Additional information

Cross border exposures

Cross border exposures are loans and advances including finance leases and instalment credit receivables and other monetary assets, such as debt securities and net derivatives, including non-local currency claims of overseas offices on local residents.

RBS N.V. monitors the geographical breakdown of these exposures based on the country of domicile of the borrower or guarantor of ultimate risk. Cross border exposures exclude exposures to local residents in local currencies.

The table below sets out cross border exposures greater than 0.5% of RBS N.V.'s total assets.

	2014				2013	2012
	Government €m	Banks €m	Other €m	Total €m	€m	€m

Financial summary continued

Short-term borrowings

The table below shows details of short-term borrowings, comprising repurchase agreements, commercial paper and certificates of deposit.

	Repurchase agreements	Other	Total	Total 2013	Total 2012
At year end					
- balance (€m)	637	1	638	11,744	12,758
- weighted average interest rate	0.7%	1.4%	0.7%	0.1%	0.5%
During the year					
- maximum balance (€m)	11,768	2	11,770	14,748	21,225
- average balance (€m)	7,656	1	7,657	12,392	10,989
- weighted average interest rate	0.1%	1.7%	0.1%	0.3%	0.6%

Balances are generally based on monthly data. Average interest rates during the year are computed by dividing total interest expense by the average amount borrowed. Average interest rates at year end are average rates for a single day and as such may reflect one-day market distortions, which may not be indicative of generally prevailing rates.

Other contractual cash obligations

The table below summarises other contractual cash obligations by payment date.

	0 – 3 months €m	3 – 12 months €m	1 – 3 years €m	3 – 5 years €m	5 – 10 years €m
Operating leases (1):					
2014	5	10	15	13	19
2013	8	19	21	15	26
2012	8	21	33	16	29

Note:

(1) No obligations extend beyond 10 years.

RBS N.V.'s undrawn formal facilities, credit lines and other commitments to lend were €648million (2013 - €847 million; 2012 - €4,994 million). While RBS N.V. has given commitments to provide these funds, some facilities may be subject to certain conditions being met by the counterparty. RBS N.V. does not expect all facilities to be drawn, and some may lapse before drawdown.

Exchange rates

The following tables show the Noon Buying Rate in New York for cable transfers in euro as certified for customs purposes by the Federal Reserve Bank of New York.

US dollars per €1	March 2015	February 2015	January 2015	December 2014	November 2014	October 2014
Noon Buying Rate						
High	1.12	1.15	1.20	1.25	1.26	1.28
Low	1.05	1.12	1.13	1.22	1.24	1.25
			2014	2013	2012	2011
Noon Buying Rate						
Period end rate			1.22	1.38	1.32	1.30
Average rate for the period (1)			1.32	1.33	1.29	1.40
Consolidation rate (2)						
Period end rate			1.22	1.38	1.32	1.29
Average rate for the period			1.32	1.33	1.29	1.39

Notes:

(1) The average of the Noon Buying Rates on the last business day of each month during the year.

(2) The rates used by RBS N.V. for translating US dollars into euro in the preparation of its financial statements.

(3) On 24 April 2015, the Noon Buying Rate was €1.00 = \$1.0876.

Additional information

Economic and monetary environment

The UK economy performed relatively well in 2014 with GDP expanding by 2.6% compared with 2013. By contrast, the eurozone's modest recovery struggle to gain traction as growth of just 0.9% was realised. Inflation fell over the course of 2014 on the back of falling food and oil prices. The Consumer Price Index rose just 0.5% in December 2014 compared to December 2013.

The UK labour market performed strongly. In October to December 2014, the number of unemployed people was 486,000 lower than a year earlier. The unemployment rate was 5.7% - the lowest level since the summer of 2008. Real wage growth turned positive in late 2014 after falling almost consistently for over six years. However, this was more a reflection of lower inflation rather than a significant uplift in wage settlements. Nominal earnings in the three months to December 2014 were 2.1% higher than in the three months to December 2013, approximately twice the pace of a year earlier but still very low on a historical basis.

UK house prices continued to increase through most of 2014 and in December 2014 they were 11.5% higher than at the pre-crisis peak in January 2008. The strength of the UK recovery in 2014 prompted talk of when interest rates will begin to rise. Earlier in the year markets anticipated an increase as soon as in 2014, but at the end of 2014 market expectations were for the first increase to take place in 2016, given below target UK inflation, exceptionally weak wage growth, a high household debt burden, daunting economic challenges in the eurozone and sluggish global growth.

The Dutch economy returned to growth in 2014, growing by an estimated 0.9% after contracting by 0.7% in 2013. 2014 was rounded off on a strong note as the economy grew by 0.8% in the three months to December 2014 compared to the three months to September 2014 on the back of broad-based growth with investment, consumer spending and exports all making a contribution. Real household earnings growth moved firmly into positive territory in 2014 on the back of lower inflation, bringing an end to almost four straight years of falling real incomes. The labour market began to heal too with unemployment falling from 7.9% in January 2014 to 7.2% by the end of 2014.

Supervision Netherlands

RBS N.V. is regulated in the Netherlands by the European Central Bank ("ECB") under the Single Supervisory Mechanism ("SSM"). As part thereof, a Joint Supervisory Team comprising of ECB and De Nederlandsche Bank (DNB) staff has been set up to conduct the day to day prudential supervision oversight. The Netherlands Authority for the Financial Markets (Autoriteit Financiële Markten (AFM) is responsible for the conduct supervision..

RBS N.V.'s regulatory system in the Netherlands is a comprehensive system based on the provisions of the Financial Supervision Act which came into effect on 1 January 2007 and in combination with applicable European legislation. The Financial Supervision Act has replaced, amongst others, the Act on the Supervision of the Credit System 1992 without affecting the existing supervisory system.

The Financial Supervision Act sets out rules regarding prudential supervision and supervision of conduct.

Prudential supervision focuses on the solidity of financial undertakings and contributes to the stability of the financial sector. Supervision of conduct focuses on orderly and transparent financial market processes, clear relations between market participants and due care in the treatment of clients (including supervision of the securities and investment businesses).

Prudential supervision

Prudential supervision of credit institutions in the Netherlands is performed by DNB under the Financial Supervision Act. No enterprise or institution established in the Netherlands may pursue the business of a credit institution unless it has obtained prior authorisation from DNB.

Its supervisory activities under the Financial Supervision Act focus on supervision of solvency, liquidity and administrative organisation, including risk management and internal control.

If, in the opinion of DNB, a credit institution fails to comply with the rules and regulations regarding the above mentioned subjects, DNB will notify the credit institution and may instruct the credit institution to behave in a certain manner. If the credit institution does not respond to any such instructions to the satisfaction of DNB, DNB is allowed to exercise additional supervisory measures that may include the imposition of fines.

Prudential supervision also oversees calculation of significant intra-group agreements, adjusted solvency, calculation of capital adequacy and significant risk concentrations. It also determines the models used by the financial undertakings to report the calculations to DNB. Finally, the regulation lays down reporting rules, for example reporting deadlines and reporting frequency.

Conduct of business supervision

The body responsible for carrying out this supervision in the Netherlands is the AFM.

Conduct of business supervision focuses on ensuring orderly and transparent financial market processes, proper relationships between market participants and the exercise of due care by financial undertakings in dealing with clients.

The Financial Supervision Act provides that each supervised credit institution must submit periodic reports to DNB. In accordance with this requirement RBS N.V. files quarterly and monthly reports with DNB.

At least one submission for each given year must be certified by an external auditor. The report to be certified is selected by an external auditor at his or her discretion.

On 1 July 2008 a decree pursuant to the Financial Supervision Act was extended to incorporate the requirements for eligibility of covered bonds. Dutch issuers of covered bonds now have the facility to register their programs with DNB. The new legislation is designed to protect the interest of covered bond holders through special supervision by DNB of the recognised covered bond programs. An issuer must comply with several conditions when submitting a program for recognition and demonstrate compliance to these conditions through the provision of specific documentation and information. Once a program is registered, the issuer will have ongoing administration and reporting obligations to adhere to.

Solvency supervision

Capital adequacy framework (Basel)

In 2004, the Basel Committee on Banking Supervision endorsed the publication of the 'International Convergence of Capital Measurement and Capital Standards: a Revised Framework', commonly referred to as Basel II. The Capital Requirements Directive, representing the translation of Basel II to EU legislation and replacing the Capital Adequacy Directive, was approved by the European Parliament in 2005. This acceptance by the European Parliament cleared the way in Europe for the implementation of the Capital Requirements Directive, with a published compliance date of 1 January 2008.

The implementation process of Basel II into Dutch legislation (Financial Supervision Act) and regulation was completed in December 2006 when DNB published its supervisory rules. The compliance date in the European Union was 1 January 2008.

Basel II provides three approaches of increasing sophistication to the calculation of credit risk capital: the Standardised Approach, the Internal Ratings Based Foundation Approach, and the Internal Ratings Based Advanced Approach. Basel II also introduces capital requirements for operational risk for the first time. Basel II is structured around the three following 'pillars'.

Pillar 1 sets out minimum regulatory capital requirements, that is, the minimum amount of capital banks must hold against credit, operational and market risks.

Pillar 2 sets out the key principles for supervisory review of an institution's risk management framework and, ultimately, its capital adequacy. It sets out specific oversight responsibilities for the Board and senior management, thus reinforcing principles of internal control and other corporate governance practices. Pillar 2 requires that the institutions conduct an internal capital adequacy assessment process.

Pillar 3 aims to bolster market discipline through enhanced disclosure by banks.

With effect from 30 June 2010, RBS N.V. migrated to Basel II status. For the majority of credit risk, RBS N.V. uses the advanced internal ratings based approach for calculating RWAs. For operational risk, RBS N.V. uses the basic indicator approach, which calculates operational risk capital charge RWA equivalent on the average operating income for three years times a fixed percentage of 15%.

In addition to the calculation of minimum capital requirements for credit, market and operational risk, banks are required to undertake an Individual Capital Adequacy Assessment Process (ICAAP) for other risks. RBS N.V.'s ICAAP, in particular, focuses on concentration risk, stress VaR, pension fund risk, interest rate risk in the banking book, FX translation risk together with stress tests to assess the adequacy of capital over two years.

RBS N.V. is consolidated for regulatory reporting within the RBS Group. Pillar 3 information for RBS N.V. is included within the RBS Group Pillar 3 disclosures. RBS Group publishes its Pillar 3 (Market disclosures) on its website www.rbs.com, providing a range of additional information relating to Basel II risk, liquidity and capital management across the RBS Group.

The disclosures focus on capital resources and adequacy, discuss a range of credit risk approaches and their associated RWAs under various Basel II approaches. Detailed disclosures are also made on credit risk mitigation, counterparty credit risk, interest rate risk in the banking book, provisions, equity, securitisation, operational and market risk.

RBS N.V. operates in multiple jurisdictions and is subject to a number of regulatory regimes.

RBS N.V.'s lead regulator in the Netherlands is DNB. RBS N.V. has direct and indirect subsidiaries of the RBS Group whose lead regulatory in the UK is the Prudential Regulation Authority (PRA). In the US, RBS N.V.'s operations are required to meet liquidity requirements set out by the US Federal Reserve Bank, Office of the Comptroller of the Currency, Federal Deposit Insurance Corporation and Financial Industry Regulatory Authority.

Exposure supervision

DNB has issued specific rules with respect to large exposures to a single borrower or group of interconnected borrowers, or in relation to certain other businesses that involve a concentration of risk. Large exposures generally include all assets and off-balance sheet items of a credit institution with respect to a single borrower or group of interconnected borrowers which exceed 10% of a credit institution's total capital. Large exposures must be reported once every quarter to DNB.

There is a limit of 25% of total capital for a single large exposure as part of the banking book. Trading book positions may exceed this limit subject to additional solvency requirements.

Liquidity supervision

Banks are required to report on a consolidated level on their liquidity position to DNB monthly, on the basis of the liquidity supervision directive. The liquidity directive seeks to ensure that banks are in a position to cope with an acute short term liquidity shortage under the assumption that banks would remain solvent. In principle, DNB liquidity directive covers all direct domestic and foreign establishments (subsidiaries/branches), including majority participations. The regulatory report also takes into consideration the liquidity effects of derivatives and the potential drawings under committed facilities.

The directive places emphasis on the short term in testing the liquidity position over a period of up to one month with a separate test of the liquidity position in the first week. For observation purposes, several additional maturity bands are included in the liquidity report (one to three months, three to six months, six months to one year and beyond one year).

Additional information

Available liquidity must always exceed required liquidity. Available liquidity and required liquidity are calculated by applying weighting factors to the relevant on- and off-balance sheet items, i.e. irrevocable commitments. The liquidity test includes all currencies. A surplus in a non convertible or non transferable currency however needs to be ignored or explicitly taken out. Compliance reports concerning liquidity requirements of foreign subsidiaries are submitted to the appropriate foreign regulatory authorities as required. At a consolidated level, and in every country in which RBS N.V. operates, RBS N.V. adheres to the liquidity standards imposed by the applicable regulatory authorities.

In accordance with the principles of the European Banking Authority (EBA) and the Basel Committee on Banking Supervision (BCBS) and as articulated in DNB's Liquidity Policy Rule (Beleidsregel liquiditeit Wft 2011) RBS N.V. is required to regularly carry out an Internal Liquidity Adequacy Assessment Process (ILAAP). The ILAAP covers RBS N.V.'s assessment of liquidity risks under the severe ILAAP stress test scenarios, the adequacy of liquidity resources and liquidity management systems and controls. The liquidity risks run by RBS N.V. are quantified through severe but plausible stress testing scenarios. Key to the ILAAP stress testing process is the benefit of actual experience during the financial crisis and the access to historic data to support the ILAAP outflow assumptions which are key inputs into the 'Quantitative Liquidity Stress Testing' (QLST) process. QLST is an essential part of RBS N.V.'s risk management process and enables RBS N.V. to model the impact of the different stress scenarios on the liquidity position.

Structural supervision

Pursuant to the Financial Supervision Act, banks are prohibited to hold, acquire or increase a qualifying holding or exercise any control relating to a qualifying holding in a bank in the Netherlands, except if it has obtained a Declaration of No Objection (DNO) from DNB (or in certain specified cases from the Dutch Minister of Finance). Qualifying holding means a participation of at least 10% in the issued share capital of the related voting rights or similar influence. The DNO would be issued unless the qualifying holding in the bank concerned would lead to an influence which might jeopardise sound and prudent operations or the qualifying holding could or would lead to an undesirable development of the financial sector.

DNB or the Dutch Minister of Finance can, on request, grant so-called bandwidths, umbrella and group-DNOs in respect of qualifying holdings. A DNO is not required in case of a qualifying holding by a bank in a company whose assets consist of more than 90% liquid assets.

According to Dutch regulation, a DNO will not be issued regarding qualifying holding by a bank in a non-financial institution if the value of the equity participation would exceed 15% of a bank's regulatory capital and if the participation would cause the value of the bank's aggregate qualifying holdings in non-financial institutions to exceed 60% of its regulatory capital. Certain types of participations will be approved in principle, although in certain circumstances a DNO will have a limited period of validity, such as in the case of a debt rescheduling or rescue operation or when the participation is acquired and held as part of an issue underwriting operation. Generally the approval will be given where the value of the non-financial institution concerned or the value of the participation does not exceed certain threshold amounts.

Supervision of the securities and investment businesses

RBS N.V. is also subject to supervision of its activities in the securities business. The Financial Supervision Act, which has replaced the Act on the Supervision of the Securities Trade 1995 together with the decrees and regulations promulgated thereunder, provides a comprehensive framework for the conduct of securities trading in or from the Netherlands. The AFM is charged by the Dutch Minister of Finance with supervision of the securities industry.

United States

RBS Holdings is both a bank holding company and a financial holding company within the meaning of the US Bank Holding Company Act of 1956. As such, it is subject to the regulation and supervision of the Board of Governors of the Federal Reserve System ('the Federal Reserve'). Among other things, RBS N.V.'s direct and indirect activities and investments in the United States are limited to those that are 'financial in nature' or 'incidental' or 'complementary' to a financial activity, as determined by the Federal Reserve.

RBS N.V. is also required to obtain the prior approval of the Federal Reserve before acquiring directly or indirectly, the ownership or control of more than 5% of any class of the voting shares of any US bank or holding company. Under current Federal Reserve policy, RBS N.V. is required to act as a source of financial strength for its US bank subsidiaries. Among other things, this source of strength obligation could require RBS N.V. to inject capital into any of its US bank subsidiaries if any of them became undercapitalised.

Anti-money laundering, anti-terrorism and economic sanctions regulations are a major focus of the US government for financial institutions and are rigorously enforced by US government agencies.

United Kingdom

The PRA is the consolidated supervisor of RBS Group. In the UK, RBS Group is subject to extensive regulations that impose obligations on financial institutions to maintain appropriate policies, procedures and controls to ensure compliance with the rules and regulations to which they are subject.

Other jurisdictions

RBS N.V. operates in over 12 countries through a network of branches, local banks and non-bank subsidiaries and these activities are subject to supervision in most cases by a local regulator or central bank.

Major shareholders

On 17 October 2007, RFS Holdings B.V. (RFS Holdings), a company incorporated by RBS Group, Fortis and Santander acquired 85.6% of RBS Holdings N.V. (RBSH Group). Through subsequent purchases RFS Holdings increased its stake in RBSH Group to 99.3% as at 31 December 2007. RFS Holdings started squeeze-out proceedings in order to acquire the remainder of the shares in RBSH Group from minority shareholders and this procedure was completed on 22 September 2008. As a result RFS Holdings is from that date the sole shareholder of RBSH Group. RFS Holdings is controlled by The Royal Bank of Scotland Group plc, which is incorporated in the UK and registered at 36 St. Andrew Square, Edinburgh, Scotland and The Royal Bank of Scotland Group plc is the ultimate parent company of RBS Holdings N.V. and RBS N.V..

Additional information

Major shareholders *continued*

On 3 October 2008, the Dutch State fully acquired all Fortis' businesses in the Netherlands, including the Fortis share in RFS Holdings. On 24 December 2008, the Dutch State purchased from Fortis Bank Nederland (Holding) N.V. its investment in RFS Holdings, to become a direct shareholder in RFS Holdings. On 31 December 2010, RBS Group increased its shareholding in RFS Holdings to 97.72%. As of that date, the Dutch State has a 1.25% shareholding and Santander has a 1.03% shareholding. On 7 November 2012 the Dutch State transferred its investment to Stichting Administratiekantoor Beheer Financiële Instellingen.

Stock exchange listings

None of the shares in RBS N.V. are listed.

Issued share capital

The issued share capital of RBS N.V. consists of 89,287 ordinary shares with a nominal value of €0.56 each.

Material contracts

RBS N.V. are party to various contracts in the ordinary course of business. Material contracts include the following:

Participation in UK Government's Asset Protection Scheme

In 2009, RBS plc, entered into an agreement (the Asset Protection Scheme (APS)) with HM Treasury (HMT), acting on behalf of the UK Government, under which it purchased credit protection over a portfolio of specified assets and exposures (covered assets) from HMT

Although the portfolio of covered assets included assets recorded on RBS N.V.'s balance sheet, RBS N.V. was not entitled to benefit under this contract.

However, RBS N.V. entered into credit protection agreements in 2009 in the form of a financial guarantee contract and a credit derivative contract with RBS plc that provides full principal protection over those covered assets attributable to RBS N.V. for their remaining life.

Under the terms of these contracts on impairment of a covered asset RBS N.V. is entitled to receive from RBS plc the present value of the difference between contractual and expected cash flows from the asset; subsequent reductions in the estimated lost cash flows are paid by RBS N.V. to RBS plc and increases paid by RBS plc to RBS N.V..

Although the RBS Group's participation in the APS ceased in October 2012, these arrangements between RBS N.V. and RBS plc remain in place.

EC Remedy

On 26 November 2009, RBS Group entered into a State Aid Commitment Deed with HM Treasury of the United Kingdom government, containing commitments and undertakings given by RBS Group to HM Treasury that are designed to ensure that HM Treasury is able to comply with the commitments given by it to the European Commission for the purpose of obtaining approval for the State aid provided to RBS Group.

As part of these commitments, RBS Group agreed that RBS Holdings would not pay investors any coupons on, or exercise any call rights in relation to, the hybrid capital instruments issued by RBS N.V. listed below, unless in any such case there was a legal obligation to do so, for an effective period of two years.

The two-year distribution restriction period in relation to the hybrid capital instruments commenced on 1 April 2011 and ended on 1 April 2013.

- 5.90% Non-cumulative Guaranteed Trust Preferred Securities of Funding Trust V (US74928K2087)
- 6.25% Non-cumulative Guaranteed Trust Preferred Securities of RBS Capital Funding Trust VI (US74928M2044)
- 6.08% Non-cumulative Guaranteed Trust Preferred Securities of RBS Capital Funding Trust VII (US74928P2074)

RBS N.V. was also subject to restrictions on the exercise of call rights in relation to its other hybrid capital instruments.

Dividends

RBS N.V.'s policy is to pay dividends on ordinary shares taking account the capital position and prospects. For further information on the payment of dividends, see page 104.

Off-balance sheet arrangements

RBS N.V. has no off-balance sheet exposures that have or are reasonably likely to have an adverse effect on its financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

For further information on off-balance sheet commitments and contingent liabilities see Note 27 to the Financial Statements.

Additional information

Risk factors

Set out below are risk factors which could adversely affect RBSH Group's future results, its financial condition and prospects and cause them to be materially different from expected results. RBSH Group is a subsidiary of RBSG and accordingly, risk factors which relate to RBSG and the RBS Group will also be of relevance to RBSH Group including RBS N.V. The factors discussed below and in this report should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties facing RBSH Group.

RBSH Group is reliant on the RBS Group.

RBSH Group is part of the RBS Group and receives capital, liquidity and funding support from the RBS Group. At 31 December 2014, RBSH Group funding included €3.9 billion (2013 - €17.7 billion) due to companies in the RBS Group of which €0.6 billion (2013 - €11.7 billion) was secured. RBSH Group also obtained capital support through its credit protection agreements with RBS Group. At 31 December 2014, these agreements reduced RBSH Group's regulatory capital requirement by €52 million (2013 - €238 million). In 2009, in connection with The Royal Bank of Scotland plc's ("RBS plc") participation in the Asset Protection Scheme (which has now been terminated) and the related agreement between RBS Group and HM Treasury, acting on behalf of the UK Government, under which RBSG purchased credit protection over a portfolio of specified assets and exposures ("covered assets") from HM Treasury, including certain assets recorded on RBSH Group's balance sheet, RBSH Group entered into back-to-back credit protection agreements with RBSG (the "Contracts") that provide full principal protection over those covered assets attributable to RBSH Group for their remaining life.

In addition, much of RBSH Group's banking operations function on the RBS Group's integrated global infrastructure. These operations include sales and marketing; customer recognition; transaction processing and execution; recordkeeping; settlement services; compliance monitoring; risk management; treasury management; accounting and financial reporting; taxation advice; information technology services; purchasing; office accommodation and administration; human resources management; and internal audit.

The reduction or cessation of the ability of the RBS Group, pursuant to the Contracts or otherwise, to provide intra-group funding, capital injections, liquidity or other financial support directly or indirectly to RBSH Group, may result in funding or capital pressures and liquidity stress for RBSH Group and may have a material adverse effect on the operations, financial condition and results of operations of RBSH Group

As a result of the transfers of a substantial part of the business activities from RBS N.V. to RBS plc as discussed under 'The RBS Group's restructuring of its CIB business will impact the planned transfers or sale of a substantial part of the business activities of RBS N.V. to RBS plc and the execution and/or any delay in the execution or non-completion of the approved transfers or sale of such business activities may have a material adverse effect on RBSH Group', the residual RBSH Group has been and will continue to be increasingly reliant on the RBS Group for capital, liquidity and funding support. Accordingly, risk factors which relate to RBSG or the RBS Group should also be considered in conjunction with the risk factors set out in this report.

The RBS Group has announced plans to further reduce the size of its business through the restructuring of its corporate and institutional banking business and make further divestments of certain of its portfolios and businesses which will adversely affect RBSH Group's business, operations, financial condition and cash flows.

In response to the global economic and financial crisis that began in 2008 and the weak economic environment that followed, the RBS Group engaged in a financial and core business restructuring focused on achieving appropriate risk-adjusted returns under these changed circumstances, reducing reliance on wholesale funding, lowering exposure to capital-intensive businesses and meeting new capital standard requirements. In November 2013, following HM Treasury's assessment of the merits of creating an external "bad bank" to hold certain assets of the RBS Group, the RBS Group committed to take a series of actions to further derisk its business and strengthen its capital position. In order to strengthen its capital position and CET1 ratio, the RBS Group decided to accelerate the divestment of Citizens Financial Group (CFG), the RBS Group's US banking subsidiary, by selling off 28.75% in an initial public offering in September 2014 and a further 28.4% of its interest in a public offering in March 2015, and fully divesting its interest in CFG by the end of 2016; and to intensify management actions to reduce risk weighted assets (including through an accelerated divestment of certain of the non-core assets transferred to RBS Capital Resolution ("RCR")).

In the first quarter of 2015, the RBS Group announced its intention to restructure its corporate and institutional banking ("CIB") business to focus on UK corporate and financial institutions with a targeted presence in selected western European customer segments. The future CIB model will:

- focus on the RBS Group's leading positions in UK rates, debt capital markets and foreign exchange;
- retain two trading hubs in the US and Singapore to support the main London trading operation;
- exit central and eastern Europe, the Middle East and Africa, and substantially reduce its presence in Asia and in the US; and
- complete the run-down of US asset-backed products.

Additional information

Risk factors continued

A number of RBSH Group's activities will be impacted by the restructuring of the RBS Group's CIB business which will result in a number of its activities or portfolios being restructured or divested. In particular, the assets and liabilities relating to RBSH Group's business in China, India and Indonesia which were originally intended to be transferred to RBS plc (as further described below) will be divested and/or run-down.

The RBS Group's and RBSH Group's ability to dispose of businesses and certain portfolios, including potential disposals associated with the restructuring of RBS Group's CIB business, which are expected to include RBSH Group's businesses in China, India and Indonesia, and the price achieved for such disposals will be dependent on prevailing economic and market conditions, which remain challenging. As a result there is no assurance that the RBS Group or RBSH Group will be able to sell and/or run-down (as applicable) the remaining businesses they are seeking to exit or sell asset portfolios either on favourable economic terms to RBSH Group or at all. Material tax or other contingent liabilities could arise on the disposal or run-down of assets or businesses and there is no assurance that any conditions precedent agreed will be satisfied, or consents and approvals required will be obtained in a timely manner, or at all. The RBS Group or RBSH Group may be exposed to deteriorations in the businesses or portfolios being sold between the announcement of the disposal and its completion, which period may span many months. In addition, the RBS Group or RBSH Group may be exposed to certain risks, including risks arising out of ongoing liabilities and obligations, breaches of covenants, representations and warranties, indemnity claims, transitional services arrangements and redundancy or other transaction related costs.

The occurrence of any of the risks described above could have a material adverse effect on RBSH Group's business, reputation, results of operations, financial condition and cash flows. There can also be no assurance that if the RBS Group is able to execute its new strategic plan that the new strategy will ultimately be successful or beneficial to the RBS Group or RBSH Group.

[The RBS Group's restructuring of its CIB business will impact the planned transfers or sale of a substantial part of the business activities of RBS N.V. to RBS plc and the execution and/or any delay in the execution or non-completion of the approved transfers or sale of such business activities may have a material adverse effect on RBSH Group.](#)

As part of the restructuring of the RBS Group businesses, operations and assets, on 19 April 2011, the RBS Group announced the proposed transfers of a substantial part of the business activities of RBS N.V. to RBS plc (the "Transfers"). The Transfers have been carried out since 2011 with the transfer of the eligible UK businesses completed during the last quarter of 2011, transfers relating to businesses in Singapore, Hong Kong and Kazakhstan, RBS N.V. businesses and other eligible businesses in the Netherlands, certain EMEA countries, Malaysia, Turkey and the United Arab Emirates completed in 2012 and transfers of businesses in Russia, Romania, Korea and North America completed in 2013.

The remaining businesses to be transferred include the businesses in China, India and Indonesia. Although the original intention was to transfer the remainder of these businesses to RBS plc, following the announcement of the restructuring of the CIB business of the RBS Group, it is now expected that these businesses will instead be disposed of by RBSH Group, when a buyer is found or the assets and liabilities comprising these businesses are divested, failing which, the businesses will be run-down.

If RBS Group is unable to find a buyer for these businesses or to achieve a fair consideration, or if the sale of the remaining businesses is delayed or is not completed for any reason, because of a failure to secure required regulatory approvals or otherwise, and because regulatory scrutiny is likely to increase as a result of the restructuring of the CIB business, this may result in increased risks of regulatory sanctions being imposed which could adversely impact the minimum regulatory requirements for capital and liquidity of RBS N.V. These businesses may also be difficult to sell and could require RBSH Group to recognise further write-downs or realise impairment charges or goodwill impairments, all of which may have a material adverse effect on RBSH Group's financial condition, results of operations and capital requirements and ratios.

[Operational risks are inherent in RBSH Group's businesses and these risks will increase as a result of the restructuring of the RBS Group's CIB business.](#)

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. RBSH Group has geographically diverse operations and operational risk and losses can result from internal and external fraud, errors by employees or third parties, failure to document transactions properly or to obtain proper authorisations, failure to comply with applicable regulatory requirements and conduct of business rules (including those arising out of anti-bribery, anti-money laundering and anti-terrorism legislation, as well as the provisions of applicable sanctions programmes), equipment failures, business continuity and data security system failures, natural disasters or the inadequacy or failure of systems and controls, including those of RBSH Group's suppliers or counterparties. Operational risks will be heightened as a result of the RBS Group's restructuring of its CIB business, which includes certain of RBSH Group's businesses. In particular, the level of structural change required as a result of the winding-down of RBSH Group's business and activities, will be disruptive and is likely to increase operational and people risks for RBSH Group and to impact its revenues and business. RBSH Group will be reliant on retaining qualified employees to manage, oversee and execute the sale or divestment of its remaining businesses and no assurance can be given that it or RBSH Group will be able to retain such employees. Although RBSH Group has implemented risk controls and loss mitigation actions and significant resources and planning have been devoted to plans to mitigate operational risk associated with RBSH Group's activities as well as the divestment of its remaining business portfolios, there can be no certainty that such actions have been or will be effective in controlling each of the operational risks faced by RBSH Group due to material uncertainties and factors outside RBSH Group's control. Ineffective management of operational risks, including the material operational risks that will arise in connection with the divestment of RBSH Group's remaining portfolios, could have a material adverse effect on RBSH Group's business, financial condition and results of operations.

Additional information

[Implementation of the ring-fence in the UK which will begin in 2015 will result in material structural changes to the RBS Group.](#)

The implementation of the ring-fencing of retail banking operations was introduced under the UK Banking Reform Act 2013. The Banking Reform Act 2013 provided primary enabling legislation in the short term with a view to completing the legislative framework for the ring-fence of retail banking operations by May 2015, requiring compliance as soon as practicable thereafter and setting a final deadline for full implementation by 2019.

Although final rules and supervisory statements will not be available until later in 2015 and early 2016, based on the proposals put forward by the RBS Group to the PRA and the Financial Conduct Authority ("FCA") to implement the ring-fence, the RBS Group and RBSH Group have identified a number of material risks associated with such implementation in addition to the uncertainty associated with starting to plan implementation before final rules and guidance are in place. The RBS Group intends to establish a ring-fence bank ("RFB") for its banking services while the non-ring-fence group ("NRFB"), will hold the RBS Group's remaining CIB activities, the operations of RBS international, RBSH Group's remaining activities if all transfers and divestments have not been completed by the implementation date and some corporate banking activities that are not permitted activities for the RFB and will be the remaining businesses following completion of the restructuring of the RBS Group's CIB business. The establishment of the RFB and the NRFB will require a significant legal and organisational restructuring of the RBS Group and the transfer of large numbers of customers between legal entities. The scale and complexity of completing this process and the operational and legal challenges that will need to be overcome will pose significant execution risks for the RBS Group. As part of the establishment of the RFB, it will be necessary for the RFB to operate independently from the NRFB and an entirely new corporate governance structure will need to be put in place by the RBS Group to ensure the RFB's independence. Although the intention is to establish corporate governance and operations in accordance with applicable rules (although not yet finalised) that are as cost efficient as possible, the effects of operating the RBS Group, the RFB and the NRFB in this manner could have a material adverse effect on the RBS Group businesses, financial condition and results of operations.

[RBSG, RBSH Group and other RBS Group companies are subject to a number of legal, regulatory and governmental actions and investigations. Unfavourable outcomes in such actions and investigations could have a material adverse effect on RBSH Group's operations, operating results, investor confidence and reputation.](#)

RBS Group's operations are diverse and complex, and the RBS Group and RBSH Group operate in legal and regulatory environments that expose them to potentially significant litigation, regulatory and governmental investigations and other regulatory risk. As a result, RBSG, RBSH Group and other RBS Group companies are, and may in the future be, involved in a number of legal and regulatory proceedings and investigations in the UK, the EU, the US and other jurisdictions. The RBS Group has recently settled a number of legal and regulatory investigations. For more detail on certain of RBSH Group's ongoing legal, governmental and regulatory proceedings, see page 135.

The RBS Group is involved in ongoing class action litigation, investigations into foreign exchange trading and rate setting activities, continuing LIBOR related litigation and investigations, securitisation and securities related litigation and civil and criminal investigations, and anti-money laundering, sanctions, mis-selling and compliance related investigations, in addition to a number of other matters. In November 2014, the RBS Group announced that it had reached a settlement with the FCA in the United Kingdom and with the Commodity Futures Trading Commission (CFTC) in the US in relation to investigations into failings in RBS Group's foreign exchange business within its Corporate and Institutional Banking division. The RBS Group agreed to pay penalties of £217 million to the FCA and \$290 million to the CFTC to resolve the investigations. The RBS Group continues to cooperate with these and other governmental and regulatory authorities and remains in discussion with these authorities on these issues including settlement discussions regarding the criminal investigation being conducted by the anti-trust and criminal division of the US Department of Justice and certain other financial regulatory authorities. Settlements in relation to these ongoing investigations may result in additional financial, non-monetary penalties, and collateral consequences, which may be material, and may give rise to additional legal claims being asserted against RBSG, RBSH Group or other RBS Group companies. The RBS Group entered into a deferred prosecution agreement in 2013 in connection with the settlement of the charges relating to the LIBOR investigation (the "LIBOR DPA"). Findings of misconduct by the US Department of Justice relating to the RBS Group, its subsidiaries or employees, may result in a breach of the terms of the LIBOR DPA which may lead to an extension of its terms or further prosecution.

Legal, governmental and regulatory proceedings and investigations are subject to many uncertainties, and their outcomes, including the timing and amount of fines or settlements, which may be material, are often difficult to predict, particularly in the early stages of a case or investigation. It is expected that the RBS Group and RBSH Group will continue to have a material exposure to legacy litigation and governmental and regulatory proceedings and investigations in the medium term. Adverse regulatory, governmental or law enforcement proceedings or adverse judgements in litigation against RBSG, RBSH Group or any other RBS Group companies could result in restrictions or limitations on RBSH Group's operations or have a significant effect on RBSH Group's reputation, results of operations and capital position.

RBSH Group may be required to make new or increase existing provisions in relation to legal proceedings, investigations and governmental and regulatory matters. Significant increases in provisions relating to ongoing investigations may have an adverse effect on RBSH Group's reputation as well as its financial condition and results of operations.

Additional information

Risk factors continued

The RBS Group and RBSH Group, like many other financial institutions, have come under greater regulatory scrutiny in recent years and expect heightened levels of regulatory supervision to continue for the foreseeable future, particularly as it relates to compliance with historical, new and existing corporate governance, employee compensation, conduct of business, consumer protection regimes, anti-money laundering and antiterrorism laws and regulations, as well as the provisions of applicable sanctions programmes. Past, current or future failures to comply with any one or more of these laws or regulations by RBSG, RBSH Group or other RBS Group companies, could have a material adverse effect on RBSH Group's reputation, financial condition and results of operations.

RBSH Group may be unable to attract or retain senior management (including members of the supervisory board) and other skilled personnel of the appropriate qualification and competence. RBSH Group may also suffer if it does not maintain good employee relations.

RBSH Group's ability to carry out the disposal and/or run-down of its remaining businesses and assets, including as a result of the restructuring of RBS Group's CIB Business, depends on its ability to attract, retain and remunerate highly skilled and qualified personnel, including senior management (which include directors and other key employees), in a highly competitive labour market. This cannot be guaranteed, particularly in light of heightened regulatory oversight of banks and the increasing scrutiny of, and (in some cases) restrictions placed upon, employee compensation arrangements, in particular those of banks in receipt of Government support (such as the RBS Group). Following the implementation in the UK of provisions of CRD IV relating to compensation in the financial sector, RBSH Group is restricted from paying variable remuneration to individuals for a particular year in an amount higher than the level of his or her fixed remuneration which may place RBSH Group at a competitive disadvantage.

The RBS Group's directors as well as members of its executive committee and certain other senior managers and employees will also be subject to the new responsibility regime introduced under the Banking Reform Act 2013 which will impose greater responsibility on such individuals. The new regime is expected to come into force in March 2016. The new regulatory regime may contribute to reduce the pool of candidates for key management and non-executive roles, including non-executive directors with the right skills, knowledge and experience, or increase the number of departures of existing employees, given concerns over the reverse burden of proof as well as the allocation of responsibilities introduced by the new rules. Because of the overlap between the members of RBS Group management and RBSH Group's supervisory board, these changes may impact RBSH Group.

In addition to the effects of such measures on RBSH Group's ability to retain non-executive directors, senior management and other key employees, the market for skilled personnel is increasingly competitive, thereby raising the cost of hiring, training and retaining skilled personnel.

The RBS Group's changing strategy has led to the departure of many experienced and capable employees. The continuing restructuring of the RBS Group and of RBSH Group, including as a result of the restructuring of the RBS Group's CIB business is expected to result in redundancies as well as lead to the departure of additional experienced and capable employees. The lack of continuity of senior management and the loss of important personnel or the failure to attract or retain a sufficient number of appropriately skilled personnel to manage the restructuring of RBSH Group's CIB activities and the disposal and/or run-down of its remaining businesses and assets could have a material adverse effect on RBSH Group's business, financial condition and results of operations.

In addition, certain of RBSH Group's employees in Europe and other jurisdictions in which RBSH Group operates are represented by employee representative bodies, including trade unions. Engagement with its employees and employee representative bodies is important to RBSH Group and a breakdown of these relationships could adversely affect RBSH Group's business, reputation and results.

RBSH Group operates in markets that are highly competitive.

The competitive landscape for banks and other financial institutions in the Netherlands, the UK, the United States, Asia and throughout the rest of Europe is subject to rapid change and recent regulatory and legal changes are likely to result in new market participants and changed competitive dynamics in certain key areas. In order to compete effectively, certain financial institutions may seek to consolidate their businesses or assets with other parties.

This consolidation, in combination with the introduction of new entrants into the markets in which RBSH Group operates, is likely to increase competitive pressures on RBSH Group.

In addition, certain competitors may have more efficient operations, including better IT systems allowing them to implement innovative technologies for delivering services to their customers, and may have access to lower cost funding and/or be able to attract deposits on more favourable terms than RBSH Group. Furthermore, competitors of RBSH Group may be better able to attract and retain clients and key employees, which may negatively impact RBSH Group's relative performance. These and other changes to competition could have a material adverse effect on RBSH Group's business, margins, profitability and financial condition.

Additional information

RBSH Group's businesses and performance can be negatively affected by actual or perceived global economic and financial market conditions and other global risks.

RBSH Group's businesses and many of its customers are, and will be, affected by global economic conditions, perceptions of those conditions and future economic prospects. The outlook for the global economy over the near to medium-term is increasingly uncertain due to a number of factors including geopolitical risks, concerns around global growth and deflation. Risks to growth and stability stem mainly from continued imbalances in many countries in Europe and elsewhere, slowing growth in emerging markets and China and the potential consequences of continued sanctions and depressed oil prices on the Russian economy. Further instability may result from uncertainty as to how economies and counterparties will be affected, directly or indirectly, by lower oil prices and other commodity prices as well as to the impact of monetary policy measures adopted by the ECB, the US Federal Reserve and the Swiss Central Bank. There remains considerable uncertainty about when the Bank of England and the Federal Reserve will begin to raise policy interest rates. RBSH Group's businesses and performance are also affected by financial market conditions. Although capital and credit markets around the world have been relatively stable since 2012, financial markets, in particular equity markets, experienced higher volatility in the last quarter of 2014 which has continued into 2015. This volatility is attributable to many of the factors noted above.

In addition, RBSH Group is exposed to risks arising out of geopolitical events, such as trade barriers, exchange controls and other measures taken by sovereign governments that can hinder economic or financial activity levels. Furthermore, unfavourable political, military or diplomatic events, armed conflict, pandemics and terrorist acts and threats, and the responses to them by governments could also adversely affect economic activity and have an adverse effect upon RBSH Group's business, financial condition and results of operations.

The challenging operating environment for RBSH Group's businesses, created by uncertain economic and market conditions is characterised by:

- reduced activity levels, additional write-downs and impairment charges and lower profitability, which either alone or in combination with regulatory changes or the activities of other market participants may restrict the ability of RBSH Group to access capital, funding and liquidity;
- prolonged periods of low interest rates resulting from ongoing central bank measures to foster economic growth which constrain, through margin compression and low returns on assets, the interest income earned by RBSH Group; and
- the risk of increased volatility in yields and asset valuations as central banks start or accelerate looser monetary policies or tighten or unwind historically unprecedented loose monetary policy or extraordinary measures. The resulting environment of uncertainty for the market and consumers could lead to challenging trading and market conditions.

Developments relating to current economic conditions and the risk of a return to a volatile financial environment, including those discussed above, could have a material adverse effect on RBSH Group's business, financial condition and results of operations.

RBSH Group is exposed to any weakening of the European economy and the renewed threat of default by certain countries in the Eurozone.

With few exceptions, countries in Europe have not yet recovered from the effects of the financial crisis. Consensus forecasts of growth in 2015 and 2016 for some of the largest European economies such as France and Italy are low. In addition, the possibility of a European sovereign default has risen due to the recent election in Greece and the outcome and impact of ongoing negotiations by the new Greek government with respect to its outstanding debt is uncertain. The risk that the effect of any sovereign default spreads by contagion to other EU economies and the UK economy remains. The euro could be abandoned as a currency by one or more countries, or in an extreme scenario, the abandonment of the euro could result in the dissolution of the European Economic and Monetary Union (EEMU). While the European Central Bank announced in January 2015 a €1.1 trillion quantitative easing programme designed to improve confidence in Eurozone equities and encourage more private bank lending, there remains considerable uncertainty as to whether such measures will be successful.

The effects on the UK, European and global economies of any potential dissolution of the EEMU or exit of one or more EU member states from the EEMU and the resulting redenomination of financial instruments from the euro to a different currency, are impossible to predict fully. However, if any such events were to occur they would likely:

- result in significant market dislocation;
- heighten counterparty risk;
- result in downgrades of credit ratings for European borrowers, giving rise to increases in credit spreads and decreases in security values;
- disrupt and adversely affect the economic activity of the UK and other European markets; and
- adversely affect the management of market risk and in particular asset and liability management due, in part, to redenomination of financial assets and liabilities and the potential for mismatches.

The occurrence of any of these events would have a material adverse effect on RBSH Group's business, financial condition and results of operations.

RBSH Group's business performance could be adversely affected if its or the RBS Group's capital requirements are not managed effectively or as a result of changes to capital adequacy requirements.

Effective management of the capital of RBSH Group is critical to its ability to operate its business. The RBS Group and RBSH Group are required by regulators in the UK, the Netherlands, the EU, the US and other jurisdictions in which they undertake regulated activities to maintain adequate capital resources. Adequate capital also gives RBSH Group financial flexibility in the face of continuing turbulence and uncertainty in the global economy.

Risk factors continued

The Basel Committee on Banking Supervision's package of reforms to the regulatory capital framework ("Basel III") raised the quantity and quality of capital required to be held by a financial institution with an emphasis on Common Equity Tier 1 (CET1) capital and introduces an additional requirement for both a capital conservation buffer and a countercyclical buffer to be met with CET1 capital. Basel III has been implemented in the EU with a new Directive and Regulation (collectively known as "CRD IV") which became effective from 1 January 2014, subject to a number of transitional provisions and clarifications. A number of the requirements introduced under CRD IV have been and continue to be further supplemented through the Regulatory and Implementing Technical Standards ("RTSs"/"ITSs") produced by the European Banking Authority (EBA) and to be adopted by the European Commission which are not yet all finalised. The EU rules deviate from the Basel III rules in certain aspects, and provide national flexibility to apply more stringent prudential requirements than set out in the Basel framework.

Under CRD IV, RBSH Group is required, on a consolidated basis, to hold a minimum amount of regulatory capital of 8% of risk weighted assets of which at least 4.5% must be CET1 capital and at least 6% must be tier 1 capital (together, the "Pillar 1 requirements"). In addition, RBSH Group's supervisory authorities may add extra capital requirements to cover risks they believe are not covered or insufficiently covered by the Pillar 1 requirements, including additional Pillar 2 requirements which will be determined and assessed specifically for the RBSH Group. CRD IV also introduces five new capital buffers that are in addition to the Pillar 1 and Pillar 2A requirements and are to be met with CET1 capital: (i) the capital conservation buffer, (ii) the institution-specific counter-cyclical buffer, (iii) the global systemically important institutions buffer, (iv) the other systemically important institutions buffer and (v) the systemic risk buffer. Some or all of these buffers are applicable to RBSH Group as determined by the European Central Bank, which became RBSH Group's regulator with the entry in force of the single resolution mechanism in Europe in November 2014 along with the Dutch Central Bank as RBSH Group's national regulatory authority. The combination of the capital conservation buffer, the institution-specific counter-cyclical capital buffer and the higher of (depending on the institution), the systemic risk buffer, the global systemically important institutions buffer and the other systemically important institution buffer, in each case (as applicable to the institution) is referred to as the "combined buffer requirement". As at 31 December 2014, RBSH Group's Tier 1 and Core Tier 1 capital ratios were 24.5% and 16.2%, respectively, calculated in accordance with regulatory requirements.

In addition, under the provisions of the CRR, which took effect from 1 January 2014, deferred tax assets that rely on future profitability (for example, deferred tax assets related to trade losses) and do not arise from temporary differences must be deducted in full from CET1 capital. Other deferred tax assets which rely on future profitability and arise from temporary differences are subject to a threshold test and only the amount in excess of the threshold is deducted from CET1 capital. The regulatory treatment of such deferred tax assets is dependent on there being no adverse changes to regulatory requirements.

Under Article 141 (Restrictions on distribution) of the CRD IV Directive, member states of the EU must require that institutions that fail to meet the "combined buffer requirement" will be subject to restricted "discretionary payments" (which are defined broadly by CRD IV as payments relating to CET1 (dividends), variable remuneration and payments on additional tier 1 instruments). The restrictions will be scaled according to the extent of the breach of the "combined buffer requirement" and calculated as a percentage of the profits of the institution since the last distribution of profits or "discretionary payment". Such calculation will result in a "maximum distributable amount" (or "MDA") in each relevant period. As an example, the scaling is such that in the bottom quartile of the "combined buffer requirement", no "discretionary distributions" will be permitted to be paid. In the event of a breach of the combined buffer requirement, RBSH Group will be required to calculate its maximum distributable amount, and as a consequence it may be necessary for RBSH Group to limit or reduce discretionary payments. From 2016, in accordance with the provisions of the Capital Requirements Regulation ("CRR"), a minimum level of capital adequacy will also be required to meet new regulatory capital requirements allowing RBSH Group to make certain discretionary payments relating to CET1 (dividends), variable remuneration and payments on additional tier 1 instruments, only to the extent that RBSH Group holds capital in excess of such minimum levels of capital requirements.

In addition to the capital requirements under CRD IV, the bank resolution and recovery directive ("BRRD") introduces requirements for banks to maintain at all times a sufficient aggregate amount of own funds and "eligible liabilities" (that is, liabilities that may be bailed in using the bail-in tool), known as the minimum requirements for eligible liabilities ("MREL"). The aim is that the minimum amount should be proportionate and adapted for each category of bank on the basis of their risk or the composition of their sources of funding. The EBA is required to develop regulatory technical standards specifying the assessment criteria that resolution authorities should use to determine the minimum requirement for own funds and eligible liabilities for individual firms. There remains considerable uncertainty as to whether such MREL requirements will need to be issued and held at group level or within a bank holding group, at operating subsidiary level, and RBSH Group is currently unable to predict the impact such rules would have on its overall capital and loss absorption requirements or its ability to comply with applicable capital or loss absorbency requirements or to make certain discretionary distributions.

Additional information

Building on changes made to requirements in relation to the quality and aggregate quantity of capital that banks must hold, the Basel Committee and other agencies are increasingly focussed on changes that will increase, or re-calibrate, measures of risk weighted assets as the key measure of the different categories of risk in the denominator of the risk-based capital ratio. There is no current global consensus regarding the key objectives of this further evolution of the international capital framework. One extreme position advocated by some regulators would materially deemphasise the role of a risk-based capital ratio. A more broadly held opinion among regulators seeks to retain the ratio but also reform it, in particular by addressing perceived excessive complexity and variability between banks and banking systems. In particular, the Basel Committee on Banking Supervision published a consultation paper in December 2014, in which it recommended reduced reliance on external credit ratings when assessing risk weighted assets and to replace such ratings with certain risk drivers based on the particular type of exposure of each asset. While they are at different stages of maturity, a number of initiatives across risk types and business lines are in progress that will impact RWAs at their conclusion. While the quantum of impacts is uncertain owing to lack of clarity of definition of the changes and the timing of their introduction, the likelihood of an impact resulting from each initiative is high and such impacts could result in higher levels of risk weighted assets.

The Basel Committee changes and other future changes to capital adequacy, loss absorbency and liquidity requirements and resolution regimes in the European Union, the UK, the US and in other jurisdictions in which RBSH Group operates, including RBSH Group's ability to satisfy the increasingly stringent stress case scenarios imposed by regulators and the adoption of the MREL proposals, may require RBS Holdings to issue Tier 1 capital (including CET1), Tier 2 capital and certain loss absorbing debt securities, and may result in existing Tier 1 and Tier 2 securities issued by RBS Holdings ceasing to count towards RBSH Group's regulatory capital. The requirement to increase the RBSH Group's levels of CET1 and Tier 2 capital, or loss absorbing debt securities, which could be mandated by RBSH Group's regulators, could have a number of negative consequences for RBSH Group as well as its shareholders, including impairing RBSH Group's ability to pay dividends on, or make other distributions in respect of, ordinary shares and diluting the ownership of existing shareholders. If RBSH Group is unable to raise the requisite amount of Tier 1 and Tier 2 capital, or loss absorbing debt securities, the RBSH Group may be required to reduce further the amount of risk weighted assets or total assets and engage in the disposal of core and other non-core businesses, which may not occur on a timely basis or achieve prices which would otherwise be attractive to RBSH Group.

Any change that limits RBSH Group's ability to implement its capital plan, or RBSH Group's ability to access funding sources or to manage effectively its balance sheet and capital resources (including, for example, reductions in profits and retained earnings as a result of write-downs or otherwise, increases in risk-weighted assets, regulatory changes, actions by regulators, delays in the disposal of certain key assets or the inability to syndicate loans as a result of market conditions, a growth in unfunded pension exposures or otherwise) could have a material adverse effect on the business, financial condition and regulatory capital position of RBSH Group.

[RBSH Group's borrowing costs, its access to the debt capital markets and its liquidity depend significantly on its and the RBS Group's credit ratings.](#)

The credit ratings of RBS N.V., as well as those of RBSG, RBS plc and other RBS Group companies, directly affect the cost of, access to and sources of their financing and liquidity. A number of European financial institutions, including RBS N.V., RBSG, RBS plc and other RBS Group companies, have been downgraded multiple times in recent years in connection with rating methodology changes, a review of systemic support assumptions incorporated into bank ratings and the likelihood, in the case of UK banks, that the UK Government is more likely in the future to make greater use of its resolution tools that allow burden sharing with debt holders. In 2014 credit ratings of RBS Holdings, RBS N.V., RBSG, RBS plc and other RBS Group companies were downgraded in connection with the RBS Group's creation of RCR, coupled with concerns about execution risks, litigation risk and the potential for conduct related fines. Rating agencies have continued to evaluate the rating methodologies applicable to UK and European financial institutions and any change in such rating agencies' methodologies could materially adversely affect the credit ratings of RBS Group companies, including RBSH Group. RBSG's long-term and short-term credit ratings were further downgraded in 2015 by Standard & Poor's Rating Services ("S&P") to reflect its views that extraordinary government support would now be unlikely in the case of UK non-operating bank holding companies and is likely to become less predictable for bank operating companies in the UK under the newly enacted legislation implementing the bail-in provisions of the BRRD. On 17 March 2015 Moody's announced multiple rating reviews following the publication of its new bank rating methodology on 16 March 2015. The new methodology affects banking entities globally and reflects, among other things, Moody's lowered expectations about the likelihood of government support for European banks in light of the introduction of the BRRD. Moody's provided a preliminary indication of the outcome of its review which is to be completed later in 2015. Moody's preliminary indication contemplates that RBSG's and RBSH N.V.'s long-term senior unsecured and issuer credit ratings would be downgraded by two notches to Ba1 and that the credit ratings of certain other RBS Group subsidiaries may also be downgraded. If these downgrades occur, the credit ratings of RBSG, RBSH N.V. and of certain of their subsidiaries would, therefore, be considered to be below-investment grade by that credit agency.

At 31 December 2014, a simultaneous one notch long-term and associated short-term downgrade in the credit ratings of RBS N.V. by the three main rating agencies would have required RBSH Group to post estimated additional collateral of €114 million, without taking account of mitigating actions by management. Any further reductions in the long-term or short-term credit ratings of RBS N.V., RBSG, RBS plc or one of their subsidiaries would increase borrowing costs, require RBSH Group to replace funding lost due to the downgrade, which may include the loss of customer deposits, may limit RBSH Group's access to capital and money markets and trigger additional collateral or other requirements in derivatives contracts and other secured funding arrangements or the need to amend such arrangements, limit the range of counterparties willing to enter into transactions with RBSH Group and may adversely affect RBSH Group's competitive position, all of which could have a material adverse impact on RBSH Group's earnings, cash flow and financial condition.

Additional information

Risk factors continued

RBSH Group's ability to meet its obligations including its funding commitments depends on RBSH Group's ability to access sources of liquidity and funding.

Liquidity risk is the risk that a bank will be unable to meet its obligations, including funding commitments, as they fall due. This risk is inherent in banking operations and can be heightened by a number of factors, including an over reliance on a particular source of wholesale funding (including, for example, short-term and overnight funding), changes in credit ratings or market-wide phenomena such as market dislocation and major disasters. Credit markets worldwide, including interbank markets, have experienced severe reductions in liquidity and term-funding during prolonged periods in recent years. Although credit markets continued to improve during 2014 and such markets remain accommodating in the early part of 2015 (in part as a result of measures taken by central banks around the world, including the ECB), and RBSH Group's overall liquidity position remained strong, certain European banks, in particular in the peripheral countries of Spain, Portugal, Greece, Italy and Ireland, remained reliant on central banks as one of their principal sources of liquidity. Although the measures taken by Central Banks have had a positive impact, the risk of volatility returning to the global credit markets remains.

The market view of bank credit risk has changed radically as a result of the financial crisis and banks perceived by the market to be riskier have had to issue debt at significant spreads. Any uncertainty relating to the credit risk of financial institutions may lead to reductions in levels of interbank lending and may restrict RBSH Group's access to traditional sources of funding or increase the costs of accessing such funding.

Management of RBSH Group's liquidity and funding focuses, among other things, on maintaining a resilient funding strategy for its assets. Although conditions have improved, there have been recent periods where corporate and financial institution counterparties have reduced their credit exposures to banks and other financial institutions, limiting the availability of these sources of funding. Under certain circumstances, RBSH Group may need to seek funds from alternative sources potentially at higher costs than has previously been the case, and/or with higher collateral or may be required to consider disposals of other assets not previously identified for disposal to reduce its funding commitments. RBSH Group has, at times, been required to rely on shorter-term and overnight funding with a consequent reduction in overall liquidity, and to increase its recourse to liquidity schemes provided by central banks. Such schemes require assets to be pledged as collateral. Changes in asset values or eligibility criteria can reduce available assets and consequently available liquidity, particularly during periods of stress when access to the schemes may be needed most.

The occurrence of any of the risks described above could have a material adverse impact on RBSH Group's financial condition and results of operations.

RBSH Group's businesses are subject to substantial regulation and oversight. Significant regulatory developments and increased scrutiny by RBSH Group's key regulators has increased compliance risks and has had and is likely to continue to have a material adverse effect on how RBSH Group conducts its business and on its results of operations and financial condition.

RBSH Group is subject to extensive financial services laws, regulations, corporate governance requirements, administrative actions and policies in each jurisdiction in which it operates. Many of these have changed recently and are subject to further material changes. Among others, the entry into force of CRD IV and the BRRD and certain other measures in the EU has considerably affected the regulatory landscape in which RBSH Group operates and will operate in the future. Increasing regulatory focus in certain areas and ongoing and possible future changes in the financial services regulatory landscape (including requirements imposed by virtue of RBSH Group's participation in government or regulator-led initiatives), have resulted in RBSH Group facing greater regulation and scrutiny.

Although it is difficult to predict with certainty the effect that the recent regulatory changes, developments and heightened levels of public and regulatory scrutiny will have on RBSH Group, the enactment of legislation and regulations in the Netherlands and the other jurisdictions in which RBSH Group operates has resulted in increased capital, funding and liquidity requirements, changes in the competitive landscape, changes in other regulatory requirements and increased operating costs and has impacted, and will continue to impact, products offerings and business models. Such changes may also result in an increased number of regulatory investigations and proceedings and have increased the risks relating to RBSH Group's ability to comply with the applicable body of rules and regulations in the manner and within the timeframes required. Any of these developments (including failures to comply with new rules and regulations) could have an impact on how RBSH Group conducts its business, its authorisations and licences, the products and services it offers, its reputation, the value of its assets, and could have a material adverse effect on its business, funding costs and its results of operations and financial condition.

Additional information

Areas in which, and examples of where, governmental policies, regulatory and accounting changes and increased public and regulatory scrutiny could have an adverse impact (some of which could be material) on the RBS Group and/or RBSH Group include those set out above as well as the following:

- requirements to separate retail banking from investment banking (ring-fencing);
- the implementation of additional or conflicting capital, loss absorption or liquidity requirements, including those mandated under MREL or by the Financial Stability Board's recommendations on total loss absorbing capacity ("TLAC");
- restructuring certain of RBSH Group's non-retail banking activities in order to satisfy local capital, liquidity and other prudential requirements;
- the monetary, fiscal, interest rate and other policies of central banks and other governmental or regulatory bodies;
- further investigations, proceedings or fines either against RBSH Group in isolation or together with other large financial institutions with respect to market conduct wrongdoing;
- requirements to operate in a way that prioritises objectives other than shareholder value creation;
- the imposition of restrictions on RBSH Group's ability to compensate its senior management and other employees and increased responsibility and liability rules applicable to senior and key employees;
- regulations relating to, and enforcement of, anti-bribery, anti-money laundering, anti-terrorism or other similar sanctions regimes;
- rules relating to foreign ownership, expropriation, nationalisation and confiscation of assets;
- other requirements or policies affecting RBSH Group's profitability, such as the imposition of onerous compliance obligations, further restrictions on business growth, product offering, or pricing;
- changes to financial reporting standards (including accounting standards), corporate governance requirements, corporate structures and conduct of business rules;
- the introduction of, and changes to, taxes, levies or fees applicable to RBSH Group's operations (such as the imposition of a financial transaction tax or changes in tax rates or to the treatment of carry-forward tax losses that reduce the value of deferred tax assets and require increased payments of tax); and
- the regulation or endorsement of credit ratings used in the EU (whether issued by agencies in EU member states or in other countries, such as the US).

Changes in laws, rules or regulations, or in their interpretation or enforcement, or the implementation of new laws, rules or regulations, including contradictory laws, rules or regulations by key regulators in different jurisdictions, or failure by RBSH Group to comply with such laws, rules and regulations, may have a material adverse effect on RBSH Group's business, financial condition and results of operations. In addition, uncertainty and lack of international regulatory coordination as enhanced supervisory standards are developed and implemented may adversely affect RBSH Group's ability to engage in effective business, capital and risk management planning.

[The RBS Group is subject to resolution procedures under resolution and recovery schemes which may result in various actions being taken in relation to the RBS Group and any securities of the RBS Group and which may adversely affect RBSH Group.](#)

In the EU, the UK and the US regulators have or are in the process of implementing resolution regimes to ensure the timely and orderly resolution of financial institutions and limit the systemic risks resulting from the failure of global and complex financial groups. In the EU and the UK, the BRRD which came into force on 1 January 2015, sets out a harmonised legal framework governing the tools and powers available to national authorities to address the failure of banks and certain other financial institutions. These tools and powers include preparatory and preventive measures, early supervisory intervention powers and resolution tools. In July 2014, the PRA published a paper on the implementation of the BRRD in the UK and in December 2014 HM Treasury published final versions of the statutory instruments transposing the BRRD which came into effect in January 2015. The PRA published its final rules and requirements implementing the BRRD in January 2015. The EBA also published final draft regulatory technical standards in December 2014 on the content of resolution plans and final guidelines on measures to reduce or remove impediments to resolvability. The implementation of the BRRD may also continue to evolve over time to ensure continued consistency with the FSB recommendations on resolution regimes and resolution planning for GSIBs, in particular with respect to TLAC requirements. The methods for implementation of any resolution and recovery scheme remain the subject of debate, particularly with respect to banking group companies and for GSIBs with complex cross border activities. Such debate includes whether the bail-in tool may be exercised through a single point of entry at the holding company or at various levels of the corporate structure of a GSIB.

Similar to other major financial institutions, both the RBS Group and RBSH Group remain engaged in a constructive dialogue on resolution and recovery planning with key national regulators and other authorities. It is expected that resolution planning in connection with RBSH Group would be addressed as part of the RBS Group's resolution plans.

[RBSH Group's operations are highly dependent on its IT systems and is increasingly exposed to cyber security threats.](#)

RBSH Group's operations are dependent on the ability to process a very large number of transactions efficiently and accurately while complying with applicable laws and regulations where it does business. The proper functioning of RBSH Group's payment systems, financial and sanctions controls, risk management, credit analysis and reporting, accounting, customer service and other IT systems, as well as the communication networks between its branches and main data processing centres, are critical to RBSH Group's operations. Critical system failure, any prolonged loss of service availability or any material breach of data security, particularly involving confidential customer data, could cause serious damage to RBSH Group's ability to service its customers, could result in significant compensation costs, could breach regulations under which RBSH Group operates and could cause long-term damage to RBSH Group's reputation, business and brands.

Additional information

Risk factors continued

In addition, RBSH Group is subject to cyber-security threats which have targeted financial institutions as well as governments and other institutions and have increased in the recent years. Failure to protect RBSH Group's operations from cyber-attacks could result in the loss of customer data or other sensitive information. Although RBSH Group has been implementing remedial actions to improve its resilience to the increasing intensity and sophistication of cyber-attacks, RBSH Group expects to be the target of continued attacks in the future and there can be no assurance that RBSH Group will be able to prevent all threats.

RBSH Group's operations have inherent reputational risk.

Reputational risk, meaning the risk of brand damage and/or financial loss due to a failure to meet stakeholders' expectations of RBSH Group's conduct and performance, is inherent in RBSH Group's business. Stakeholders include customers, investors, rating agencies, employees, suppliers, government, politicians, regulators, special interest groups, consumer groups, media and the general public. Brand damage can be detrimental to the business of RBSH Group in a number of ways, including its ability to build or sustain business relationships with customers, low staff morale, regulatory censure or reduced access to, or an increase in the cost of, funding. In particular, negative public opinion resulting from the actual or perceived manner in which any member of the RBS Group, including RBSH Group, conducts its business activities, RBSH Group's financial performance, ongoing investigations and proceedings and the settlement of any such investigations and proceedings, the level of direct and indirect government support or actual or perceived practices in the banking and financial industry may adversely affect RBSH Group's ability to keep and attract customers and, in particular, corporate and retail depositors. Modern technologies, in particular online social networks and other broadcast tools which facilitate communication with large audiences in short time frames and with minimal costs, may significantly enhance and accelerate the impact of damaging information and allegations. RBSH Group cannot ensure that it will be successful in avoiding damage to its business from reputational risk, which could result in a material adverse effect on RBSH Group's business, financial condition and results of operations.

RBSH Group may suffer losses due to employee misconduct.

RBSH Group's businesses are exposed to risk from potential non-compliance with policies, regulatory rules, employee misconduct or negligence and fraud, which could result in regulatory sanctions and serious reputational or financial harm to RBSH Group. In recent years, a number of multinational financial institutions, including RBSH Group, have suffered material losses due to the actions of employees. It is not always possible to deter employee misconduct and the precautions RBSH Group takes to prevent and detect this activity may not always be effective.

The financial performance of RBSH Group has been, and may continue to be, materially affected by counterparty credit quality and deterioration in credit quality could arise due to prevailing economic and market conditions and legal and regulatory developments.

RBSH Group has exposure to many different industries and counterparties, and risks arising from actual or perceived changes in credit quality and the recoverability of monies due from borrowers and counterparties are inherent in a wide range of RBSH Group's businesses. In particular, RBSH Group has significant exposure to certain individual counterparties in weaker business sectors and geographic markets and also has concentrated country exposure in a limited number of countries in Europe, the United States and Asia.

The credit quality of RBSH Group's borrowers and counterparties is impacted by prevailing economic and market conditions and by the legal and regulatory landscape in their respective markets. Although credit quality has improved in certain of RBSH Group's core markets, a further deterioration in economic and market conditions or changes to legal or regulatory landscapes could worsen borrower and counterparty credit quality and also impact RBSH Group's ability to enforce contractual security rights. In addition, RBSH Group's credit risk is exacerbated when the collateral it holds cannot be realised or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure that is due to RBSH Group, which is most likely to occur during periods of illiquidity and depressed asset valuations, such as those experienced in recent years. Any such losses could have an adverse effect on RBSH Group's results of operations and financial condition.

Concerns about, or a default by, one financial institution could lead to significant liquidity problems and losses or defaults by other financial institutions, as the commercial and financial soundness of many financial institutions may be closely related as a result of credit, trading, clearing and other relationships. Even the perceived lack of creditworthiness of, or questions about, a counterparty may lead to market-wide liquidity problems and losses for, or defaults by, RBSH Group. This systemic risk may adversely affect financial intermediaries, such as clearing agencies, clearing houses, banks, securities firms and exchanges with which RBSH Group interacts on a daily basis, all of which could have a material adverse effect on RBSH Group's access to liquidity or could result in losses which could have a material adverse effect on RBSH Group's financial condition and results of operations.

The trends and risks affecting borrower and counterparty credit quality have caused, and in the future may cause, RBSH Group to experience further and accelerated impairment charges, increased repurchase demands, higher costs, additional write-downs and losses for RBSH Group and an inability to engage in routine funding transactions.

Additional information

Changes in interest rates, foreign exchange rates, credit spreads, bond, equity and commodity prices, basis, volatility and correlation risks and other market factors have significantly affected and will continue to affect RBSH Group's business and results of operations.

Some of the most significant market risks RBSH Group faces are interest rate, foreign exchange, credit spread, bond, equity and commodity prices and basis, volatility and correlation risks. Changes in interest rate levels (or extended periods of low interest rates such as experienced over the past several years), yield curves (which remain depressed) and spreads may affect the interest rate margin realised between lending and borrowing costs, the effect of which may be heightened during periods of liquidity stress. Changes in currency rates, particularly in the euro-sterling and euro-US dollar exchange rates, affect the value of assets, liabilities, income and expenses denominated in non-euro currencies and the reported earnings of RBSH Group's non-eurozone incorporated subsidiaries and may affect RBS Holdings's reported consolidated financial condition or its income from foreign exchange dealing. Such changes may result from the decisions of Central Banks in Europe and of the Federal Reserve in the US and lead to sharp and sudden variations in foreign exchange rates. For accounting purposes, RBSH Group carries some of its issued debt, such as debt securities, at the current market price on its balance sheet. Factors affecting the current market price for such debt, such as the credit spreads of RBSH Group, may result in a change to the fair value of such debt, which is recognised in the income statement as a profit or loss.

The performance and volatility of financial markets affects bond and equity prices, has caused, and may in the future cause, changes in the value of RBSH Group's investment and trading portfolios. Financial markets experienced significant volatility towards the end of 2014 and this trend has continued in early 2015, resulting in further short term changes in the valuation of certain of RBSH Group's assets. In addition, during the last quarter of 2014, oil prices fell significantly against their historical levels and other commodity prices also decreased. RBSH Group is exposed to oil prices through its exposure to counterparties in the energy sector and oil producing countries. Further or sustained decreases in oil prices could negatively impact counterparties and the value of RBSH Group's trading portfolios. As part of its on-going derivatives operations, RBSH Group also faces significant basis, volatility and correlation risks, the occurrence of which are also impacted by the factors noted above.

While RBSH Group has implemented risk management methods to mitigate and control these and other market risks to which it is exposed, it is difficult to predict with accuracy changes in economic or market conditions and to anticipate the effects that such changes could have on RBSH Group's financial performance and business operations.

RBSH Group's earnings and financial condition have been, and its future earnings and financial condition may continue to be, materially affected by depressed asset valuations resulting from poor market conditions.

In previous years, severe market events resulted in RBSH Group recording large write-downs on its credit market exposures. Any deterioration in economic and financial market conditions or weak economic growth could lead to further impairment charges and write-downs. Moreover, market volatility and illiquidity (and the assumptions, judgements and estimates in relation to such matters that may change over time and may ultimately not turn out to be accurate) make it difficult to value certain of RBSH Group's exposures. Valuations in future periods, reflecting, among other things, the then prevailing market conditions and changes in the credit ratings of certain of RBSH Group's assets, may result in significant changes in the fair values of RBSH Group's exposures, such as credit market exposures and the value ultimately realised by RBSH Group may be materially different from the current or estimated fair value.

As part of RBSH Group's strategy, it has materially reduced the size of its balance sheet mainly through the sale and run-off of non-core assets. In addition, certain of RBSH Group's assets that were part of its non-core division, together with additional assets identified as part of a HM Treasury review of the RBS Group in 2013, became part of the RBS Group's Capital Resolution Group ("CRG") as of 1 January 2014. In connection with the establishment of CRG, the RBS Group indicated its aspiration to remove the vast majority, if not all of the assets comprising RCR within three years which resulted in increased impairments of £4.5 billion which were recognised by the RBS Group in Q4 2013, none of which related to RBSH Group. These assets may be difficult to sell and could be subject to further write-downs or, when sold, realised losses. Any of these factors could require the RBS Group and/or RBSH Group to recognise further significant write-downs, realise increased impairment charges or goodwill impairments, all of which may have a material adverse effect on RBSH Group's financial condition, results of operations and capital ratios.

The value of certain financial instruments recorded at fair value is determined using financial models incorporating assumptions, judgements and estimates that may change over time or may ultimately not turn out to be accurate.

Under International Financial Reporting Standards (IFRS), RBSH Group recognises at fair value: (i) financial instruments classified as held-for-trading or designated as at fair value through profit or loss; (ii) financial assets classified as available-for-sale; and (iii) derivatives.

Additional information

Risk factors continued

Generally, to establish the fair value of these instruments, RBSH Group relies on quoted market prices or, where the market for a financial instrument is not sufficiently active, internal valuation models that utilise observable market data. In certain circumstances, the data for individual financial instruments or classes of financial instruments utilised by such valuation models may not be available or may become unavailable due to prevailing market conditions. In such circumstances, RBSH Group's internal valuation models require RBSH Group to make assumptions, judgements and estimates to establish fair value, which are complex and often relate to matters that are inherently uncertain. These assumptions, judgements and estimates also need to be updated to reflect changing facts, trends and market conditions. The resulting change in the fair values of the financial instruments has had and could continue to have a material adverse effect on RBSH Group's earnings, financial condition and capital position.

[RBSH Group relies on valuation, capital and stress test models to conduct its business and anticipate capital and funding requirements. Failure of these models to provide accurate results or accurately reflect changes in the micro and macro economic environment in which RBSH Group operates could have a material adverse effect on RBSH Group's business, capital and results.](#)

Given the complexity of RBSH Group's business, strategy and capital requirements, RBSH Group relies on analytical models to assess the value of its assets and its risk exposure and anticipate capital and funding requirements. RBSH Group's valuation, capital and stress test models and the parameters and assumptions on which they are based need to be constantly updated to ensure their accuracy. Failure of these models to accurately reflect changes in the environment in which RBSH Group operates or the failure to properly input any such changes could have an adverse impact on the modelled results or could fail to accurately capture the risk profile of RBSH Group's financial instruments. Some of the analytical models used by RBSH Group are predictive in nature. The use of predictive models has inherent risks and may incorrectly forecast future behaviour, leading to flawed decision making and potential losses. RBSH Group also uses valuation models that rely on market data inputs. If incorrect market data is input into a valuation model, it may result in incorrect valuations or valuations different to those which were predicted and used by RBSH Group in its forecasts or decision making. Should such models prove to be incorrect or misleading, decisions made by RBSH Group in reliance thereon could expose RBSH Group to business, capital and funding risk.

[The legal demerger of ABN AMRO Bank N.V. \(as it was then named\) has resulted in a cross liability that affects the legal recourse available to investors.](#)

On 6 February 2010, ABN AMRO Bank N.V. (as it was then named) was demerged into two entities, being RBS N.V. (the former ABN AMRO Bank N.V.) and the new ABN AMRO Bank.

In principle, investors now only have recourse to the entity to which the relevant assets and liabilities have been transferred for payments in respect of the appropriate securities. Under the Dutch Civil Code, however, each entity remains liable to creditors for the monetary obligations of the other entity that existed at the date of the legal demerger in the event that the other entity cannot meet its obligations to those creditors. In each case, the liability relates only to obligations existing at the date of the legal demerger.

The liability of RBS N.V. is limited to the equity retained at legal demerger. At the time of the legal demerger, this liability amounted to €4.0 billion and this liability will reduce over time. The liability of the new ABN AMRO Bank N.V. is limited to the amount of equity acquired at legal demerger, which amounted to €1.8 billion, which will also reduce over time.

RBS N.V. has made arrangements to mitigate the risks of liability to the creditors which transferred to the new ABN AMRO Bank upon legal demerger. The new ABN AMRO Bank has also made arrangements to mitigate the risks of liability to the creditors that remain in RBS N.V. Both of these entities hold the level of regulatory capital agreed upon with the Dutch Central Bank for purposes of covering any residual risks.

Glossary of terms

Arrears - the aggregate of contractual payments due on a debt that have not been met by the borrower. A loan or other financial asset is said to be 'in arrears' when payments have not been made.

Asset-backed commercial paper (ABCP) - a form of asset-backed security generally issued by a commercial paper conduit.

Asset-backed securities (ABS) - securities that represent interests in specific portfolios of assets. They are issued by a structured entity following a securitisation. The underlying portfolios commonly comprise residential or commercial mortgages but can include any class of asset that yields predictable cash flows. Payments on the securities depend primarily on the cash flows generated by the assets in the underlying pool and other rights designed to assure timely payment, such as guarantees or other credit enhancements. Collateralised debt obligations, collateralised loan obligations, commercial mortgage backed securities and residential mortgage backed securities are all types of ABS.

Asset quality (AQ) band - probability of default banding for all counterparties on a scale of 1 to 10.

Assets under management - assets managed by the Group on behalf of clients.

Back-testing - statistical techniques that assess the performance of a model, and how that model would have performed had it been applied in the past.

Basel II - the capital adequacy framework issued by the Basel Committee on Banking Supervision in June 2006 in the form of the 'International Convergence of Capital Measurement and Capital Standards'.

Basel III - in December 2010, the Basel Committee on Banking Supervision issued final rules: 'Basel III: A global regulatory framework for more resilient banks and banking systems' and 'Basel III: International framework for liquidity risk measurement, standards and monitoring'.

Basis point - one hundredth of a per cent i.e. 0.01 per cent. 100 basis points is 1 per cent. Used when quoting movements in interest rates or yields on securities.

Bear steepener - a steepening of the yield curve caused by long-term rates increasing faster than short term rates.

BIPRU - the prudential sourcebook for banks, building societies and investment firms. The part of the Financial Conduct Authority (FCA) Handbook that sets out detailed prudential requirements for the banks that they regulate.

Bull flattener - a flattening of the yield curve in which long term rates are decreasing faster than short term rates.

Buy-to-let mortgages - mortgages to customers for the purchase of residential property as a rental investment.

Capital requirements regulation (CRR) - see CRD IV.

Central counterparty (CCP) - an intermediary between a buyer and a seller (generally a clearing house).

Certificates of deposit (CDs) - bearer negotiable instruments acknowledging the receipt of a fixed term deposit at a specified interest rate.

Collateralised debt obligations (CDOs) - asset-backed securities for which the underlying asset portfolios are debt obligations: either bonds (collateralised bond obligations) or loans (collateralised loan obligations) or both. The credit exposure underlying synthetic CDOs derives from credit default swaps. The CDOs issued by an individual vehicle are usually divided in different tranches: senior tranches (rated AAA), mezzanine tranches (AA to BB), and equity tranches (unrated). Losses are borne first by the equity securities, next by the junior securities, and finally by the senior securities; junior tranches offer higher coupons (interest payments) to compensate for their increased risk.

Collateralised loan obligations (CLOs) - asset-backed securities for which the underlying asset portfolios are loans, often leveraged loans.

Collectively assessed loan impairment provisions - impairment loss provisions in respect of impaired loans, such as credit cards or personal loans, that are below individual assessment thresholds. Such provisions are established on a portfolio basis, taking account of the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends.

Commercial mortgage backed securities (CMBS) - asset-backed securities for which the underlying asset portfolios are loans secured on commercial real estate.

Commercial paper (CP) - unsecured obligations issued by a corporate or a bank directly or secured obligations (asset-backed CP), often issued through a commercial paper conduit, to fund working capital. Maturities typically range from two to 270 days. However, the depth and reliability of some CP markets means that issuers can repeatedly roll over CP issuance and effectively achieve longer term funding. CP is issued in a wide range of denominations and can be either discounted or interest-bearing.

Commercial paper conduit - a structured entity that issues commercial paper and uses the proceeds to purchase or fund a pool of assets. The commercial paper is secured on the assets and is redeemed either by further commercial paper issuance, repayment of assets or liquidity drawings.

Commercial real estate - freehold and leasehold properties used for business activities. Commercial real estate includes office buildings, industrial property, medical centres, hotels, retail stores, shopping centres, agricultural land and buildings, warehouses, garages etc.

Common Equity Tier 1 capital - the highest quality form of regulatory capital under Basel III comprising common shares issued and related share premium, retained earnings and other reserves excluding the cash flow hedging reserve, less specified regulatory adjustments.

Glossary of terms

Constant currency - reported results for the current reporting period are compared to results for comparative periods retranslated at exchange rates for the current period.

Contractual maturity - the date in the terms of a financial instrument on which the last payment or receipt under the contract is due for settlement.

Core Tier 1 capital - under Basel 2 called-up share capital and eligible reserves plus equity non-controlling interests, less intangible assets and other regulatory deductions.

Core Tier 1 capital ratio - Core Tier 1 capital as a percentage of risk-weighted assets.

Cost:income ratio - operating expenses as a percentage of total income.

Counterparty credit risk - the risk that a counterparty defaults before the maturity of a derivative or sale and repurchase contract. In contrast to non-counterparty credit risk, the exposure to counterparty credit risk varies by reference to a market factor (e.g. interest rate, exchange rate, asset price).

Coverage ratio - impairment provisions as a percentage of impaired loans.

Covered bonds - debt securities backed by a portfolio of mortgages that are segregated from the issuer's other assets solely for the benefit of the holders of the covered bonds.

CRD IV - the European Union has implemented the Basel III capital proposals through the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD), collectively known as CRD IV. CRD IV was implemented on 1 January 2014. The European Banking Authority's technical standards are still to be finalised through adoption by the European Commission and implemented within the UK.

Credit default swap (CDS) - a contract where the protection seller receives premium or interest-related payments in return for contracting to make payments to the protection buyer upon a defined credit event in relation to a reference financial asset or portfolio of financial assets. Credit events usually include bankruptcy, payment default and rating downgrades.

Credit derivative product company (CDPC) - a structured entity that sells credit protection under credit default swaps or certain approved forms of insurance policies. Sometimes they can also buy credit protection. CDPCs are similar to monoline insurers. However, unlike monoline insurers, they are not regulated as insurers.

Credit derivatives - contractual agreements that provide protection against a credit event on one or more reference entities or financial assets. The nature of a credit event is established by the protection buyer and protection seller at the inception of a transaction, and such events include bankruptcy, insolvency or failure to meet payment obligations when due. The buyer of the credit derivative pays a periodic fee in return for a payment by the protection seller upon the occurrence, if any, of a credit event. Credit derivatives include credit default swaps, total return swaps and credit swap options.

Credit enhancements - techniques that improve the credit standing of financial obligations; generally those issued by a structured entity in a securitisation. External credit enhancements include financial guarantees and letters of credit from third party providers. Internal enhancements include excess spread - the difference between the interest rate received on the underlying portfolio and the coupon on the issued securities; and over-collateralisation - on securitisation, the value of the underlying portfolio is greater than the securities issued.

Credit grade - a rating that represents an assessment of the creditworthiness of a customer. It is a point on a scale representing the probability of default of a customer.

Credit risk - the risk of financial loss due to the failure of a customer, or counterparty, to meet its obligation to settle outstanding amounts.

Credit risk mitigation - reducing the credit risk of an exposure by application of techniques such as netting, collateral, guarantees and credit derivatives.

Credit valuation adjustment (CVA) - the CVA is the difference between the risk-free value of a portfolio of trades and its market value, taking into account the counterparty's risk of default. It represents the market value of counterparty credit risk, or an estimate of the adjustment to fair value that a market participant would make to reflect the creditworthiness of its counterparty.

Currency swap - an arrangement in which two parties exchange specific principal amounts of different currencies at inception and subsequently interest payments on the principal amounts. Often, one party will pay a fixed rate of interest, while the other will pay a floating rate (though there are also fixed-fixed and floating-floating arrangements). At the maturity of the swap, the principal amounts are usually re-exchanged.

Customer accounts - money deposited with the Group by counterparties other than banks and classified as liabilities. They include demand, savings and time deposits; securities sold under repurchase agreements; and other short term deposits. Deposits received from banks are classified as deposits by banks.

Debit valuation adjustment (DVA) - an adjustment made by an entity to the valuation of OTC derivative liabilities to reflect within fair value the entity's own credit risk.

Debt securities - transferable instruments creating or acknowledging indebtedness. They include debentures, bonds, certificates of deposit, notes and commercial paper. The holder of a debt security is typically entitled to the payment of principal and interest, together with other contractual rights under the terms of the issue, such as the right to receive certain information. Debt securities are generally issued for a fixed term and redeemable by the issuer at the end of that term. Debt securities can be secured or unsecured.

Debt securities in issue - unsubordinated debt securities issued by the Group. They include commercial paper, certificates of deposit, bonds and medium-term notes.

Glossary of terms

Deferred tax asset - income taxes recoverable in future periods as a result of deductible temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in tax deductible amounts in future periods) and the carry-forward of tax losses and unused tax credits.

Deferred tax liability - income taxes payable in future periods as a result of taxable temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in taxable amounts in future periods).

Defined benefit obligation - the present value of expected future payments required to settle the obligations of a defined benefit plan resulting from employee service.

Defined benefit plan/scheme - pension or other post-retirement benefit plan other than a defined contribution plan.

Defined contribution plan/scheme - pension or other post-retirement benefit plan where the employer's obligation is limited to its contributions to the fund.

Deposits by banks - money deposited with the Group by banks and recorded as liabilities. They include money-market deposits, securities sold under repurchase agreements, federal funds purchased and other short term deposits. Deposits received from customers are recorded as customer accounts.

Derivative - a contract or agreement whose value changes with changes in an underlying index such as interest rates, foreign exchange rates, share prices or indices and which requires no initial investment or an initial investment that is smaller than would be required for other types of contracts with a similar response to market factors. The principal types of derivatives are: swaps, forwards, futures and options.

Discontinued operation - a component of the Group that either has been disposed of or is classified as held for sale. A discontinued operation is either: a separate major line of business or geographical area of operations or part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations; or a subsidiary acquired exclusively with a view to resale.

Economic capital - an internal measure of the capital required by the Group to support the risks to which it is exposed.

Economic profit - the difference between the return on shareholders funds and the cost of that capital. Economic profit is usually expressed as a percentage.

Effective interest rate method - the effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Encumbrance - an interest in an asset held by another party. Encumbrance usually impacts the transferability of the asset and can restrict its free use until the encumbrance is removed.

Equity risk - the risk of changes in the market price of the equities or equity instruments arising from positions, either long or short, in equities or equity-based financial instruments.

Eurozone - the 17 European Union countries that have adopted the euro: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia and Spain.

Expected loss (EL) - expected loss represents the anticipated loss on an exposure over one year. It is determined by multiplying probability of default, loss given default and exposure at default and can be calculated at individual, credit facility, customer or portfolio level.

Exposure - a claim, contingent claim or position which carries a risk of financial loss.

Exposure at default (EAD) - an estimate of the extent to which the bank will be exposed under a specific facility, in the event of the default of a counterparty.

FICO score - a credit score calculated using proprietary software developed by the Fair Isaac Corporation in the US from a consumer's credit profile. The scores range between 300 and 850 and are used in credit decisions made by banks and other providers of credit.

Financial Conduct Authority (FCA) - the statutory body responsible for conduct of business regulation and supervision of UK authorised firms from 1 April 2013. The FCA also has responsibility for the prudential regulation of firms that do not fall within the PRA's scope.

Financial Services Compensation Scheme (FSCS) - the UK's statutory fund of last resort for customers of authorised financial services firms. It pays compensation if a firm is unable to meet its obligations. The FSCS funds compensation for customers by raising management expenses levies and compensation levies on the financial services industry.

First/second lien - a lien is a charge such as a mortgage held by one party, over property owned by a second party, as security for payment of some debt, obligation, or duty owed by that second party. The holder of a first lien takes precedence over all other encumbrances on that property i.e. second and subsequent liens.

Forbearance - forbearance takes place when a concession is made on the contractual terms of a loan in response to a customer's financial difficulties.

Forward contract - a contract to buy (or sell) a specified amount of a physical or financial commodity, at an agreed price, at an agreed future date.

Fully loaded Basel III basis - capital ratios based on the rules that will apply at the end of the Basel III transition period.

Glossary of terms

Funding valuation adjustment (FVA) - represents an estimate of the adjustment to fair value that a market participant would make to incorporate funding costs and benefits that arise in relation to uncollateralised derivative exposures.

Futures contract - a contract which provides for the future delivery (or acceptance of delivery) of some type of financial instrument or commodity under terms established at the outset. Futures differ from forward contracts in that they are traded on recognised exchanges and rarely result in actual delivery; most contracts are closed out prior to maturity by acquisition of an offsetting position.

G10 - the Group of Ten comprises the eleven industrial countries (Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom and the United States) that have agreed to participate in the International Monetary Fund's (IMF's) General Arrangements to Borrow.

Government Sponsored Enterprises (GSEs) - a group of financial services corporations created by the US Congress. Their function is to improve the efficiency of capital markets and to overcome statutory and other market imperfections which otherwise prevent funds from moving easily from suppliers of funds to areas of high loan demand. They include the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association.

Gross yield - the interest rate earned on average interest-earning assets i.e. interest income divided by average interest-earning assets.

Haircut - a downward adjustment to collateral value to reflect its nature, any currency or maturity mismatches between a credit risk mitigant and the underlying exposure to which it is being applied.

Hedge funds - pooled investment vehicles that are not widely available to the public; their assets are managed by professional asset managers who participate in the performance of the fund.

Impaired loans - all loans for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans.

Impairment allowance - see Loan impairment provisions.

Impairment losses - (a) for impaired financial assets measured at amortised cost, impairment losses - the difference between carrying value and the present value of estimated future cash flows discounted at the asset's original effective interest rate - are recognised in profit or loss and the carrying amount of the financial asset reduced by establishing a provision (allowance) (b) for impaired available-for-sale financial assets, the cumulative loss that had been recognised directly in equity is removed from equity and recognised in profit or loss as an impairment loss.

Individual liquidity guidance (ILG) - guidance from the PRA on a firm's required quantity of liquidity resources and funding profile.

Individually assessed loan impairment provisions - impairment loss provisions for individually significant impaired loans assessed on a case-by-case basis, taking into account the financial condition of the counterparty and any guarantor and the realisable value of any collateral held.

Interest rate swap - a contract under which two counterparties agree to exchange periodic interest payments on a predetermined monetary principal, the notional amount.

Interest spread - the difference between the gross yield and the interest rate paid on average interest-bearing liabilities.

Internal Capital Adequacy Assessment Process (ICAAP) - the Group's own assessment, as part of Basel II requirements, of its risks, how it intends to mitigate those risks and how much current and future capital is necessary having considered other mitigating factors.

Internal funding of trading business - the internal funding of the trading book comprises net banking book financial liabilities that fund financial assets in the Group's trading portfolios. Interest payable on these financial liabilities is charged to the trading book.

International Accounting Standards Board (IASB) - the independent standard-setting body of the IFRS Foundation. Its members are responsible for the development and publication of International Financial Reporting Standards (IFRSs) and for approving Interpretations of IFRS as developed by the IFRS Interpretations Committee.

International Swaps and Derivatives Association (ISDA) master agreement - a standardised contract developed by ISDA for bilateral derivatives transactions. The contract grants legal rights of set-off for derivative transactions with the same counterparty.

Investment grade - generally represents a risk profile similar to a rating of BBB-/Baa3 or better, as defined by independent rating agencies.

Key management - members of the RBS Group Executive Committee.

Latent loss provisions - loan impairment provisions held against impairments in the performing loan portfolio that have been incurred as a result of events occurring before the balance sheet date but which have not been identified as impaired at the balance sheet date.

Level 1 - level 1 fair value measurements are derived from quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

Level 2 - level 2 fair value measurements use inputs, other than quoted prices included within level 1, that are observable for the asset or liability, either directly or indirectly.

Level 3 - level 3 fair value measurements use one or more unobservable inputs for the asset or liability.

Leverage ratio - a measure prescribed under Basel III. It is the ratio of Tier 1 capital to total exposures. Total exposures include on-balance sheet items, off-balance sheet items and derivatives, and generally follow the accounting measure of exposure.

Glossary of terms

Leveraged finance - funding (leveraged finance) provided to a business resulting in an overall level of debt in relation to cash flow that exceeds that which would be considered usual for the business or for the industry in which it operates. Leveraged finance is commonly employed to achieve a specific, often temporary, objective: to make an acquisition, to effect a buy-out or to repurchase shares.

Liquidity and funding risk - the risk that the Group is unable to meet its financial liabilities when they fall due.

Liquidity coverage ratio (LCR) - the ratio of the stock of high quality liquid assets to expected net cash outflows over the following 30 days. High quality liquid assets should be unencumbered, liquid in markets during a time of stress and, ideally, central bank eligible.

Loan:deposit ratio - the ratio of loans and advances to customers net of provision for impairment losses and excluding reverse repurchase agreements to customer deposits excluding repurchase agreements.

Loan impairment provisions - loan impairment provisions are established to recognise incurred impairment losses on a portfolio of loans classified as loans and receivables and carried at amortised cost. It has three components: individually assessed loan impairment provisions, collectively assessed loan impairment provisions and latent loss provisions.

Loan-to-value ratio - the amount of a secured loan as a percentage of the appraised value of the security e.g. the outstanding amount of a mortgage loan as a percentage of the property's value.

London Interbank Offered Rate (LIBOR) - the benchmark interest rate at which banks can borrow funds from other banks in the London interbank market.

Loss given default (LGD) - an estimate of the amount that will not be recovered by the Group in the event of default, plus the cost of debt collection activities and the delay in cash recovery.

Market risk - the risk of loss arising from fluctuations in interest rates, credit spreads, foreign currency rates, equity prices, commodity prices and other risk-related factors such as market volatilities that may lead to a reduction in earnings, economic value or both.

Master netting agreement - an agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on, or termination of, any one contract.

Maximum distributable amount (MDA) - a restriction on distributions which may be made by a bank which does not meet the combined buffer requirements as set out in the PRA Supervisory Statement SS6/14 'Implementing CRD IV: capital buffers'.

Medium term notes (MTNs) - debt securities usually with a maturity of five to ten years, but the term may be less than one year or as long as 50 years. They can be issued on a fixed or floating coupon basis or with an exotic coupon; with a fixed maturity date (non-callable) or with embedded call or put options or early repayment triggers. MTNs are generally issued as senior unsecured debt.

Monoline insurers (monolines) - entities that specialise in providing credit protection against the notional and interest cash flows due to the holders of debt instruments in the event of default. This protection is typically in the form of derivatives such as credit default swaps.

Mortgage-backed securities - asset-backed securities for which the underlying asset portfolios are loans secured on property. See Residential mortgage backed securities and Commercial mortgage backed securities.

Mortgage servicing rights - the rights of a mortgage servicer to collect mortgage payments and forward them, after deducting a fee, to the mortgage lender.

Negative equity mortgages - mortgages where the value of the property mortgaged is less than the outstanding balance on the loan.

Net interest income - the difference between interest receivable on financial assets classified as loans and receivables or available-for-sale and interest payable on financial liabilities carried at amortised cost.

Net interest margin - net interest income as a percentage of average interest-earning assets.

Net stable funding ratio (NSFR) - the ratio of available stable funding to required stable funding over a one year time horizon, assuming a stressed scenario. Available stable funding includes items such as equity capital, preferred stock with a maturity of over one year and liabilities with an assessed maturity of over one year.

Non-performing loans - loans classified as Risk elements in lending and potential problem loans. They have a 100% probability of default and have been assigned an AQ10 internal credit grade.

Operational risk - the risk of loss resulting from inadequate or failed processes, people, systems or from external events.

Option - an option is a contract that gives the holder the right but not the obligation to buy (or sell) a specified amount of the underlying physical or financial commodity, at a specific price, at an agreed date or over an agreed period. Options can be exchange-traded or traded over-the-counter.

Over-the-counter (OTC) derivatives - derivatives with tailored terms and conditions negotiated bilaterally, in contrast to exchange traded derivatives that have standardised terms and conditions.

Own credit adjustment (OCA) - the effect of the Group's own credit standing on the fair value of financial liabilities.

Past due - a financial asset such as a loan is past due when the counterparty has failed to make a payment when contractually due.

Pillar 1 - the part of Basel II that sets out the process by which regulatory capital requirements should be calculated for credit, market and operational risk.

Glossary of terms

Pillar 2 - Pillar 2 is intended to ensure that firms have adequate capital to support all the relevant risks in their business and is divided into capital held against risks not captured or not fully captured by the Pillar 1 regulations (Pillar 2A) and risks to which a firm may become exposed over a forward-looking planning horizon (Pillar 2B). Capital held under Pillar 2A, in addition to the Pillar 1 requirements, is the minimum level of regulatory capital a bank should maintain at all times to cover adequately the risks to which it is or might be exposed, and to comply with the overall financial adequacy rules. Pillar 2B is a capital buffer which helps to ensure that a bank can continue to meet minimum requirements during a stressed period, and is determined by the PRA evaluating the risks to which the firm may become exposed (e.g. due to changes to the economic environment) during the supervisory review and evaluation process. All firms will be subject to a PRA buffer assessment and the PRA will set a PRA buffer only if it judges that the CRD IV buffers are inadequate for a particular firm given its vulnerability in a stress scenario, or where the PRA has identified risk management and governance failings, which the CRD IV buffers are not intended to address.

Pillar 3 - the part of Basel II that sets out the information banks must disclose about their risks, the amount of capital required to absorb them, and their approach to risk management. The aim is to strengthen market discipline.

Position risk requirement - a capital requirement applied to a position treated under BIPRU 7 (Market risk) as part of the calculation of the market risk capital requirement.

Potential future exposure - is a measure of counterparty risk/credit risk. It is calculated by evaluating existing trades done against the possible market prices in future during the lifetime of the transactions.

Potential problem loans (PPL) - loans for which an impairment event has taken place but no impairment loss is expected. This category is used for advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

Private equity investments - equity investments in operating companies not quoted on a public exchange. Capital for private equity investment is raised from retail or institutional investors and used to fund investment strategies such as leveraged buyouts, venture capital, growth capital, distressed investments and mezzanine capital.

Probability of default (PD) - the likelihood that a customer will fail to make full and timely repayment of credit obligations over a one year time horizon.

Prudential Regulation Authority (PRA) - the statutory body responsible, from 1 April 2013, for the prudential supervision of banks, building societies, insurers and a small number of significant investment firms in the UK. The PRA is a subsidiary of the Bank of England.

Regular way purchase or sale - a purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame established generally by regulation or convention in the marketplace concerned.

Regulatory capital - the amount of capital that the Group holds, determined in accordance with rules established by the PRA for the consolidated Group and by local regulators for individual Group companies.

Repurchase agreement (Repo) - see Sale and repurchase agreements.

Residential mortgage - a loan to purchase a residential property where the property forms collateral for the loan. The borrower gives the lender a lien against the property and the lender can foreclose on the property if the borrower does not repay the loan per the agreed terms. Also known as a home loan.

Residential mortgage backed securities (RMBS) - asset-backed securities for which the underlying asset portfolios are residential mortgages. RBS Group RMBS classifications, including prime, non-conforming and sub-prime, reflect the characteristics of the underlying mortgage portfolios. RMBS are classified as prime RMBS where the loans have low default risk and are made to borrowers with good credit records and reliable payment histories and there is full documentation. Non-conforming RMBS include US Alt-A RMBS, together with RMBS in jurisdictions other than the US where the underlying mortgages are not classified as either prime or sub-prime. Classification of RMBS as subprime or Alt-A is based on Fair Isaac Corporation scores (FICO), level of documentation and loan-to-value ratios of the underlying mortgage loans. US RMBS are classified as sub-prime if the mortgage portfolio comprises loans with FICO scores between 500 and 650 with full or limited documentation. Mortgages in Alt-A RMBS portfolios have FICO scores of 640 to 720, limited documentation and an original LTV of 70% to 100%. In other jurisdictions, RMBS are classified as sub-prime if the mortgage portfolio comprises loans with one or more high risk characteristics such as: unreliable or poor payment histories; high loan-to-value ratios; high debt-to-income ratio; the loan is not secured on the borrower's primary residence; or a history of delinquencies or late payments on the loan.

Retail loans - loans made to individuals rather than institutions. The loans may be for car purchases, home purchases, medical care, home repair, holidays and other consumer uses.

Return on equity - profit attributable to ordinary and B shareholders divided by average shareholders' equity as a percentage.

Reverse repurchase agreement (Reverse repo) - see Sale and repurchase agreements.

Risk appetite - an expression of the maximum level of risk that the Group is prepared to accept to deliver its business objectives.

Risk asset ratio (RAR) - total regulatory capital as a percentage of risk-weighted assets.

Risk elements in lending (REIL) - impaired loans and accruing loans which are contractually overdue 90 days or more as to principal or interest.

Risk-weighted assets (RWAs) - assets adjusted for their associated risks using weightings established in accordance with the Basel Capital Accord as implemented by the PRA. Certain assets are not weighted but deducted from capital.

Glossary of terms

Sale and repurchase agreements - in a sale and repurchase agreement one party, the seller, sells a financial asset to another party, the buyer, at the same time the seller agrees to reacquire and the buyer to resell the asset at a later date. From the seller's perspective such agreements are repurchase agreements (repos) and from the buyer's reverse repurchase agreements (reverse repos).

Securitisation - a process by which assets or cash flows are transformed into transferable securities. The underlying assets or cash flows are transferred by the originator or an intermediary, typically an investment bank, to a structured entity which issues securities to investors. Asset securitisations involve issuing debt securities (asset-backed securities) that are backed by the cash flows of income-generating assets (ranging from credit card receivables to residential mortgage loans).

Settlement balances - payables and receivables that result from purchases and sales of financial instruments recognised on trade date. Asset settlement balances are amounts owed to the Group in respect of sales and liability settlement balances are amounts owed by the Group in respect of purchases.

Sovereign exposures - exposures to governments, ministries, departments of governments and central banks.

Standardised approach - a method used to calculate credit risk capital requirements under Pillar 1 of Basel II. In this approach the risk weights used in the capital calculation are determined by regulators. For operational risk, capital requirements are determined by multiplying three years' historical gross income by a percentage determined by the regulator. The percentage ranges from 12 to 18%, depending on the type of underlying business being considered.

Standstill - is an agreement, usually for a specified period of time, not to enforce the Bank's rights as a result of a customer breaching the terms and conditions of their facilities. This is a concession to the customer. A standstill is most commonly used in a complex restructuring of a company's debts, where a group of creditors agree to delay enforcement action to give the company time to gather information and formulate a strategy with a view to establishing a formal restructuring.

Stress testing - a technique used to evaluate the potential effects on an institution's financial condition of an exceptional but plausible event and/or movement in a set of financial variables.

Stressed value-at-risk (SVaR) - a VaR measure using historical data from a one year period of stressed market conditions. For the purposes of calculating regulatory SVaR, a time horizon of ten trading days is assumed at a confidence level of 99%. See also Value-at-risk below.

Structured credit portfolio (SCP) - a portfolio of certain of the Group's illiquid assets - principally CDO super senior positions, negative basis trades and monoline exposures - held within Non-Core division.

Structured entity (SE) - an entity that has been designed such that voting or similar rights are not the dominant factor in deciding who controls the entity, for example when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. SEs are usually established for a specific, limited purpose, they do not carry out a business or trade and typically have no employees. They take a variety of legal forms - trusts, partnerships and companies - and fulfil many different functions.

Structured notes - securities that pay a return linked to the value or level of a specified asset or index. Structured notes can be linked to equities, interest rates, funds, commodities and foreign currency.

Subordinated liabilities - liabilities which, in the event of insolvency or liquidation of the issuer, are subordinated to the claims of depositors and other creditors of the issuer.

Super senior CDO - the most senior class of instrument issued by a CDO vehicle. They benefit from the subordination of all other instruments, including AAA rated securities, issued by the CDO vehicle.

Supervisory slotting approach - a method of calculating regulatory capital, specifically for lending exposures in project finance and income producing real estate, where the PD estimates do not meet the minimum IRB standards. Under this approach, the bank classifies exposures from 1 to 5, where 1 is strong and 5 is default. Specific risk-weights are assigned to each classification.

Tier 1 capital - a component of regulatory capital, comprising common equity tier 1 and additional tier 1. Additional tier 1 capital includes eligible non-common equity capital securities and any related share premium. Under Basel II, Tier 1 capital comprises Core Tier 1 capital plus other Tier 1 securities in issue, less certain regulatory deductions.

Tier 1 capital ratio - a component of regulatory capital, comprising eligible capital securities and any related share premium. Under Basel II, qualifying subordinated debt and other Tier 2 securities in issue, eligible collective impairment allowances, unrealised gains arising on the fair valuation of equity instruments held as available-for-sale, less certain regulatory deductions.

Tier 2 capital - qualifying subordinated debt and other Tier 2 securities in issue, eligible collective impairment allowances, unrealised available-for-sale equity gains and revaluation reserves less certain regulatory deductions.

Total loss absorbing capacity (TLAC) - an FSB proposal for global systemically important banks to have a sufficient amount of specific types of liabilities which can be used to absorb losses and recapitalise a bank in resolution. These proposals are intended to facilitate an orderly resolution that minimises any impact on financial stability, ensures the continuity of critical functions, and avoids exposing taxpayers to loss.

Unaudited - financial information that has not been subjected to the audit procedures undertaken by the Group's auditors to enable them to express an opinion on the Group's financial statements.

US Federal Agencies - are independent bodies established by the US Government for specific purposes such as the management of natural resources, financial oversight or national security. A number of agencies, including, the Government National Mortgage Association, issue or guarantee publicly traded debt securities.

Value-at-risk (VaR) - a technique that produces estimates of the potential loss in the market value of a portfolio over a specified time period at a given confidence level.

Wholesale funding - wholesale funding comprises Deposits by banks, Debt securities in issue and Subordinated liabilities.

Glossary of terms

Write-down - a reduction in the carrying value of an asset to record a decline in its fair value or value in use.

Wrong-way risk - the risk of loss when the risk factors driving the exposure to a counterparty or customer are positively correlated with the creditworthiness of that counterparty i.e. the size of the exposure increases at the same time as the risk of the counterparty or customer being unable to meet that obligation, increases
