

European Commission amends Marketing Authorisation for RUCONEST® to include self-administration

- Administration kits to be available in EU markets during the coming months
- EU approval of self-administration follows US approval received in 2014

Leiden, The Netherlands, 16 January 2017: Pharming Group N.V. (the “Company”) (EURONEXT: PHARM) today announced that, following the positive opinion of the Committee for Medicinal Products for Human Use (CHMP), the European Commission has adopted the Commission Implementing Decision to amend the marketing authorisation for RUCONEST® to include self administration using the RUCONEST® Administration Kit.

This decision allows for self-administration of RUCONEST® for acute hereditary angioedema (HAE) attacks by adolescents and adults with a new custom-designed RUCONEST® Administration Kit in the comfort and privacy of their own homes or at any other place they choose, without the necessity of a healthcare professional (HCP) being present.

The Administration Kit will become available for use in the various EU markets, following approval of the Educational Materials by the local authorities, expected over the coming one to three months.

HAE is a rare disease caused by a deficiency of the C1 esterase inhibitor protein and is characterized by spontaneous and recurrent episodes of swelling (edema attacks) of the skin in different parts of the body, as well as in the airways and internal organs. Edema of the throat, nose or tongue is particularly dangerous and potentially life-threatening and can lead to obstruction of the airway passages.

Prof. Bruno Giannetti, MD, PhD, Pharming’s COO, commented:

“This EU label change is yet another testament to RUCONEST®’s well-established and favorable safety profile. Over 28,000 post-approval vials of RUCONEST® to treat HAE attacks have now been prescribed, making it a convenient, safe and effective way to stop these attacks. With approval of this administration kit, it will now be as convenient to use RUCONEST® in the EU as it already is in the US.”

Self-administration (at home or without a HCP present) was granted immediately upon approval in the US as a result of more safety data being available at the time of the Biologics License Application (BLA) and subsequent approval in July 2014.

Detailed recommendations for the use of this product will be described in the updated summary of product characteristics (SmPC), which will be published in the revised European public assessment report (EPAR) in all official European Union languages on the EMA website..

About HAE

Hereditary Angioedema (HAE) is a rare genetic disorder. The condition is caused by a deficiency of the C1 esterase inhibitor protein, which is normally present in blood and helps control inflammation (swelling) and parts of the immune system. Because defective C1-Inhibitor does not adequately perform its regulatory function, a biochemical imbalance can occur and produce unwanted peptides that induce the capillaries to release fluids into surrounding tissue, thereby causing swelling or edema.

HAE is characterized by spontaneous and recurrent episodes of swelling (edema attacks) of the skin in different parts of the body, as well as in the airways and internal organs. Edema of the skin usually affects the extremities, the face, and the genitals. Patients suffering from this kind of edema often withdraw from their social lives because of the disfiguration, discomfort and pain these symptoms may cause. Almost all HAE patients suffer from bouts of severe abdominal pain, nausea, vomiting and diarrhea caused by swelling of the intestinal wall.

Edema of the throat, nose or tongue is particularly dangerous and potentially life-threatening and can lead to obstruction of the airway passages. Although there is currently no known cure for HAE, it is possible to treat the symptoms associated with angioedema attacks. HAE affects about 1 in 10,000 to 1 in 50,000 people worldwide. Experts believe that a lot of patients are still seeking the right diagnosis: although HAE is (in principle) easy to diagnose, it is frequently identified very late or not discovered at all. The reason HAE is often misdiagnosed is because the symptoms are similar to those of many other common conditions such as allergies or appendicitis. By the time it is diagnosed correctly, the patient has often been through a long-lasting ordeal.

About RUCONEST®

RUCONEST® (recombinant C1 esterase inhibitor) is indicated for the treatment of acute attacks in adult and adolescent patients with hereditary angioedema (HAE). Effectiveness in clinical studies was not established in HAE patients with laryngeal attacks.

RUCONEST contains C1 esterase inhibitor at 50 IU/kg. When administered at the onset of HAE attack symptoms at the recommended dose, RUCONEST may help to return a patient's C1 esterase inhibitor levels to normal range and relieve the symptoms of an HAE attack with a low recurrence of symptoms within 24 hours.

RUCONEST is the only recombinant C1 esterase inhibitor approved by the U.S. Food and Drug Administration (FDA) and was approved in July 2014.

Recently, RUCONEST® demonstrated very positive data for prophylaxis (prevention) in patients with HAE. If approved for this indication, RUCONEST® will have access to this additional market. RUCONEST®, therefore, has the potential to be the only recombinant C1 esterase inhibitor product

approved to target both the acute market (worth approximately \$845 million) and the HAE prophylaxis market (separately worth approximately \$700 million).

About Pharming Group N.V.

Pharming is a specialty pharmaceutical company developing innovative products for the safe, effective treatment of rare diseases and unmet medical needs. Pharming's lead product, RUCONEST® (conestat alfa) is a recombinant human C1 esterase inhibitor approved for the treatment of acute Hereditary Angioedema ("HAE") attacks in patients in Europe, the US, Israel and South Korea. The product is available on a named-patient basis in other territories where it has not yet obtained marketing authorization.

RUCONEST® is commercialized by Pharming in Algeria, Andorra, Austria, Bahrain, Belgium, France, Germany, Ireland, Jordan, Kuwait, Lebanon, Luxembourg, Morocco, Netherlands, Oman, Portugal, Qatar, Syria, Spain, Switzerland, Tunisia, United Arab Emirates, United Kingdom, United States of America and Yemen.

RUCONEST® is distributed by Swedish Orphan Biovitrum AB (publ) (SS: SOBI) in the other EU countries, and in Azerbaijan, Belarus, Georgia, Iceland, Kazakhstan, Liechtenstein, Norway, Russia, Serbia and Ukraine.

RUCONEST® is distributed in Argentina, Colombia, Costa Rica, the Dominican Republic, Panama, and Venezuela by Cytobiotech, in South Korea by HyupJin Corporation and in Israel by Megapharm.

RUCONEST® is also being investigated in a Phase II clinical trial for the treatment of HAE in young children (2-13 years of age) and evaluated for various additional follow-on indications.

Pharming's technology platform includes a unique, GMP-compliant, validated process for the production of pure recombinant human proteins that has proven capable of producing industrial quantities of high quality recombinant human proteins in a more economical and less immunogenetic way compared with current cell-line based methods. Leads for enzyme replacement therapy ("ERT") for Pompé and Fabry's diseases are being optimized at present, with additional programs not involving ERT also being explored at an early stage at present.

Pharming has a long term partnership with the China State Institute of Pharmaceutical Industry ("CSIPI"), a Sinopharm company, for joint global development of new products, starting with recombinant human Factor VIII for the treatment of Haemophilia A. Pre-clinical development and manufacturing will take place to global standards at CSIPI and are funded by CSIPI. Clinical development will be shared between the partners with each partner taking the costs for their territories under the partnership.

Pharming has declared that the Netherlands is its "Home Member State" pursuant to the amended article 5:25a paragraph 2 of the Dutch Financial Supervision Act.
