Barendrecht, January 30th 2015

ICT develops predictive services with Intel® IoT Gateway

Today ICT Automatisering (ICT) released the combined case study with Intel®. ICT leverages their Internet of Things Analytics platform (iOTA) on Intel® Intelligent Gateway, an Internet of Things (IoT) solution that helps customers connect new and legacy devices to extract maximum value from the data residing within them.

With customer interest in IoT growing, ICT identified an opportunity to create a single end-to-end solution which bundles the software, communication infrastructure, data analytics, and business apps of an IoT deployment into a single platform. Bringing together ICT's software, apps, and cloud expertise and the Intel® Intelligent Gateway, the resulting iOTA solution reduces costs and deployment time for IoT solutions.

Gerhard Lesch, IoT Business Development Manager, Intel®: "Last year ICT joined the Intel® IoT Solutions Alliance. Sequentially, the iOTA predictive services solution is leveraging the Intel® Intelligent Gateway. It strengthens ICT's go to market goals in delivering industrial grade and secure solutions to customers in 2015. The jointly developed case study ([link](#)) describes the challenges customers will face during the development of an IoT solution and how iOTA is able to address these issues."

John Koot, IoT Business Development Manager, ICT Automatisering: "The Intel® IoT Gateway delivers on all fronts. In addition to its essential security features, it enables ICT to implement advanced data management and analytics from sensor through to data center. And because it uses technologies that seamlessly communicate with each other, it helps us achieve our goals for shorter time to market and reduced deployment costs."

About ICT Automatisering

ICT Automatisering (ICT) provides high-quality technological solutions in the information and communication technology domain, particularly in these application areas (verticals): Automotive & Mobility, Logistics & Transport, Machine & Systems, High Tech, Industrial Automation, Energy and Healthcare. The company is active in the Netherlands and has Near Shoring teams both in Poland and Bulgaria ([Strypes](#)). The solutions which ICT offers clients involve the secondment of experienced and highly educated staff, realizing system solutions on project basis and offering services to maintain ICT systems. Through participations, ICT is also active in Traffic & Transport and Testing. www.ict.eu
