

Heijmans to reconstruct access road to Bio Science Park Leiden

Heijmans has received a mandate from the municipal authority of Leiden to proceed with the reconstruction of the access road to the Bio Science Park Leiden. This urban reconstruction includes the design and realization of a split-level junction, widening of part of the city's ring road, and two underpasses for cyclists. The contract is valued at over €25 million.

Various infrastructure and civil engineering disciplines are working together on this comprehensive contract, which has been awarded based on the MEAT (Most Economically Advantageous Tender) criterion. Heijmans has given shape to the design in the tender phase in dialogue with the client. Image quality and urban integration are important aspects in this respect, which translate into a well-thought-out traffic engineering design, good visibility of the traffic flows and space for greenery. With the reconstruction, the municipality of Leiden aims to improve the accessibility of the city, the Bio Science Park, and the connection with the A44. The works will commence at the beginning of 2015 and completion is anticipated autumn 2016.

About Heijmans

Heijmans is a listed company that combines activities related to property development, residential building, non-residential, technical services and infrastructure. Heijmans is active in the Netherlands, Belgium and Germany. Our focus on quality improvements, integrated projects, sustainability and profitability enables us to provide added value for our customers. Heijmans realises integrated projects for residential consumers, companies and public sector bodies. With around 7,400 employees and €2.1 billion in revenues in 2013, we are building the spatial contours of tomorrow.
