

Press Release

7th September 2010

Antonov plc ('the Company' or 'Antonov')

LIFAN Project extended with second vehicle type

The progress which has been made with the TX-6 and which has been shown to high ranking officers of LIFAN in a meeting supported by videos and photographs, has been acknowledged and appreciated by LIFAN.

The project to build in a TX-6 B-sample in the LIFAN 620 is currently underway and the car will be delivered in China in the coming months.

LIFAN has now asked Antonov to build in a second transmission with preferably a majority of components sourced from final (Chinese) suppliers, into another LIFAN vehicle, a 1.8 litre SUV, for which the TX-6 is being considered a suitable solution as well. This project is planned for the beginning of 2011, when the Chinese components will be available, leading to C-sample level.
